Polio Fight Faces Crisis

Only a few days remain of the 1951 March of Dimes.

As in former years, most citizens of our country have contributed generously to the fight against the cruel epidemic disease—infantile paralysis. But this year is not like former years. This year, unless contributions are increased, the program of the National Foundation for Infantile Paralysis stands in danger of curtailment.

Consequently, for those who have not yet given—and for those who may be able to give again—these few reminders are pertinent:

1. Through March of Dimes funds, thousands of boys and girls are enabled to obtain the care they need when polio strikes. There have been more polio cases in the last three years than ever before for a similar period.

2. Through March of Dimes funds a great program of scientific research and professional education is being financed to find a preventive or cure and to train polio experts. Progress is being made at an ever-increasing rate, and success eventually seems assured.

3. Through March of Dimes funds we shall someday relegate polio to the limbo of conquered diseases. In the meantime, we cannot let any of today's patients down.
