GOOD HEALTH
1. HOW GOOD ARE A WOUNDED SOLDIER'S CHANCES?
2. IS MEASLES EVER DANGEROUS?
3. WILL WALKING TAKE OFF WEIGHT?

Answer to Question No. 1:
1. Because of the improvement in medical treatment given at the aid stations in World War II, the effects of shock, loss of blood and infection were greatly counteracted. After that, the patient stood an excellent chance of recovery when he reached a hospital. According to the medical military record, 96 out of 100 men who reached hospitals were saved. In World War I, when a lower percentage of wounded reached hospitals, the number was 89 out of 100.

Answer to Question No. 2:
2. Yes, in infancy. When contracted at school age the disease is less dangerous if proper medical care is given. Measles, since it takes epidemic form, runs in cycles with relatively few cases for several years and great number of cases in other years. For example in 1947 there were 221,100 cases whereas in 1949 there were 620,900 cases.

Answer to Question No. 3:
3. A 36-mile hike will take off just one pound of fat. In addition, the hiker would lose several pounds of water, which he would replace rapidly. Obviously, walking is not much of a solution for overweight. The age-old answer remains. Just don't eat so much of the wrong foods.

LOVE AND HATE ARE NOT OPPOSITE EMOTIONS

Though love and hate appear to be quite opposite emotions and totally contrary to one another, the truth is that they are merely extremes of the same emotion. Psychologists say this is the reason people sometimes feel the greatest hatreds toward those whom they love most, as is shown by quarrels of lovers. Likewise, if we hate some one intensely, we possess the capacity for loving that person. The two are the same emotion, merely going in opposite directions.
