Care of Christmas Trees Explained

Salem — Christmas tree hints on how to keep your tree fresh and beautiful were given out by Lynn F. F. Cronmiller, assistant state forester.

"If you live in the city," the forester said, "chances are that your Christmas tree has been cut a week or two earlier and should receive care immediately to prevent discoloration and falling of the needles. Christmas trees are like any other plants and respond when the base is placed in water and kept in a cool place."

Cronmiller outlined the procedure to keep the Christmas tree in first class shape until ready for use:

1. Saw a slanting fresh cut immediately above the original cut. This will permit tree to absorb water.
2. Place the tree base in fresh water. A bucket or deep pan will do.
3. Keep tree outside in a cool place until ready to bring into the house.

After bringing the tree in the house, again place the trunk in a bucket or pan of water. This moisture will continue to keep the tree fresh and green and will also render it less susceptible to fire. Cronmiller said that forestry officials had made many tests with chemicals but none were as satisfactory as plain water as a preservative. As long as the tree trunk is kept in water, the needles will remain firm and green for a considerable period.

Cronmiller stated that weights could be placed in the bucket to keep the tree erect. Also, stands, with water devices for holding trees, may be purchased at local stores and Christmas tree lots.
