First Home Loan To Korean Serviceman

The first home loan to a Korean ex-serviceman under the recently amended state veterans loan act has just been completed, the Oregon Department of Veterans' Affairs announced recently.

The recipient was Edward B. Low of Portland, who received the maximum loan of \$6,000 to purchase a home at 2214 NE. 10th avenue.

Originally limited to World War II veterans, the four percent home and farm loan program was extended by voters in the November general election to veterans of service since the start of Korean hostilities.

Low was a student at the University of Oregon when he enlisted in the regular army in 1948. He was discharged in October, 1950, as a private first class, after service in the medical corps with American occupation forces in Japan. Born and reared in Portland, he is presently employed as a photo copy operator in the Multnomah county court house, microfilming public documents.

The Oregon veterans' loan program started in 1945. More than 9,000 World War II veterans have borrowed nearly \$40,000,000 under the program through the state Department of Veterans' Affairs.

The recent amendment to the act makes the program available to veterans of 90 days or more of service anywhere since June 25, 1950, who were Oregon residents when they entered service or who reside in Oregon for two years or more following discharge.

World War II veterans to be entitled must have been Oregon residents when they entered service or have lived in Oregon for two years between date of discharge and Dec. 31, 1950.

There is no deadline for applying.

Timberwolves Roll Over St. Paul 56-45

The Mill City Timberwolves rolled to a 56 to 45 win over the St. Paul Buckaroos in a Marion County "B" League basketball game last Friday, January 9. The Timberwolves were definitely not in their best form and the Buckaroo kept close all the time up until the last quarter.

Mill City had a 25 to 17 half-time advantage but at the very start of the second half St. Paul rallied to tie the score. They ran close for a while and then Mill City pulled away to make a short 39 to 33 lead at the end of the third quarter. Mill City's Roy Chase high-lighted the game with 27 points. G. Smith of St. Paul was next with 18 points.

The Mill City junior varsity slaughtered St. Paul's JV's 61 to 17. LeRoy Emerson was top scorer for Mill City with 16 points. High for St. Paul was Ted Rambeau with 8 points. Mill City had 17 to 7 at the end of the first quarter. At half-time Mill City had stretched to 29 to 14. In the third quarter Mill City held St. Paul scoreless while they made 22 points to make the score 54 to 14 at the end of the third quarter.

3,100 CHAPTERS IN POLIO FIGHT
 The National Foundation for Infantile Paralysis has 3,100 chapters serving every county in the United States, plus Alaska, Hawaii, Puerto Rico, the Canal Zone and the Virgin Islands. These chapters use March of Dimes funds to pay treatment costs in whole or in part for every polio patient who cannot foot the bills unaided.

The appearance of new born lambs throughout the county is a reminder that ewes should be tagged, says O. E. Mikesell, county extension agent. Removing all excess wool from the udder makes it possible for the lamb to nurse easily.

Gross Farm Income in Linn County Down

Gross income from farm marketings in Linn county in 1952 totaled \$19,804,000, a drop of 4.8 percent from 1951, according to estimates released today by County Extension Agent O. E. Mikesell.

The principal reasons for an overall decrease were lower prices for livestock and seed crops and a decline in turkey numbers. Coupled with the lower gross incomes, says Mikesell, is a decline in net return to farmers because of higher costs of purchased items and increased taxes, interest rates and labor.

Linn county continues to lead the state in the production of seed crops. The value of 1952 seed crops was \$4,900,000 which is the county's number one source of income. Principal seed crops are common ryegrass, perennial ryegrass and alta fescue.

Of the total gross income, 41.23% is from animal sources and 58.77% from crop sources. It is usually considered ideal to have agricultural income evenly divided between the two sources from a soil conserving standpoint. The establishment and utilization of pastures, says Mikesell, is having a tendency to more equally balance the two figures.
