## 1965 Water Supply Is Excellent

The 1965 water supply outlook for the Willamette Valley is excellent at this early-winter date, according to a report released today by A. J. Webber, State Conservationist for the Soil Conservation Service, and prepared by W. T. Frost, State Snow Survey Supervisor representing cooperating federal, state, and private agencies. Reservoirs now hold above average water supplies and are expected to make room for flows expected to come. Soil moisture in mountain watersheds is near saturation and the snowpack is well above average.

Abnormally high temperatures and rainfall erased all snow from the lower elevations in late December. Since then snow has accumulated nearly continuously and is now 145 percent average in water content. The snowpack is three times heavier than at this date last year.

Watershed soils are close to saturation at all but the highest elevations. This factor will favor runoff next spring and summer.

As of January 1 seven multipurpose reservoirs on Willamette tributaries held much more water than usual for this date but they were spilling to provide space for future runoff. Total water stored in these reservoirs was 68 percent of their total capacity.

Timothy Lake, operated by Portland General Electric Company on the Clackamas watershed, was nearly full with 61, 100 acre feet in storage.

Spring and summer flows of Willamette tributaries rising on the west slope of the Cascades are expected to be well above the 15 year average (1948-62) this season.

Flow of the Middle Fork of the Willamette below North Fork averaged 205 percent for the period October 1, 1964 through January 1, 1965. The flow during December was 341 percent of average.

Statewide the chances are good for above average water supplies in 1965. Snow surveys at selected key snow courses in Oregon's mountain watersheds reveal water content substantially above average for this early-winter date. Moisture in the soil mantle of all watersheds is considerably above average as a result of recent record-breaking rains and heavy snow melt. Reservoir water supplies increased rapidly during December and are well above average with many reservoirs now spilling to make space for flows to come.

The next evaluation of water supply conditions will be made about February 5 from snow surveys and other data.

### Girl of the Month

Girl of the month for December at Santiam High school is Janice Gordon, daughter of Mrs. James Gordon. She is a senior this year.
