HOW TO CUT HEAT COSTS

5 tips that can help you get more
warmth from your heating oil dollar

1. Keep your oil burner clean and properly adjusted. And use today's Shell Heating Oil. It contains a special additive called FOA-5X. This additive helps keep critical burner passages free from clogging—assures better firing.
2. Set your thermostat back when you go to bed at night—save significantly on your heating oil bills.
3. Be sure your burner has sufficient air. Oil needs lots of air to burn properly. Don't block off air supply to burner. Don't allow dust and lint to accumulate on air intake openings.
4. Don't block hot air vents or cold air return ducts with furniture.
5. Stop air leaks around poorly fitted windows by using weather-stripping or storm windows.
