GOVERNOR WANTS TIME

Warner Valley Settlers' Claims Taken Up at Second Session of State Board.

SALEM, July 8.--(Sp.-) Oregon.--Several weeks ago the matter of the boundary between the Warner Valley Land Company and several others in that valley came up before the State Land Board for final decision. The Warner Valley Company claims title to land through the state by virtue of purchase and deed. These other parties claim the land by virtue of settlement under the homestead act. The State Land Board decided to send the matter to the Government, while the land company desired to settle the point in court to save the cost of litigation. The result is that the Government has decided to send the matter to the state for settlement. It is understood that an effort is being made by the disputants to compromise the differences.

The new session of the State Land Board will open this week, and it is expected that the matter of the Warner Valley will come up for final decision. The board will then decide whether the Warner Valley Company's claim is valid or not. The result of the decision will have an important bearing on the future settlement of the area.

LAKE COUNTY, OREGON, THURSDAY, AUGUST 6, 1903.

PEOPLE FALL INTO RIVER.

Part of Bridge Across Willamette at Community Is Wrecked; Three Are Drowned as a Result.

An appalling accident occurred at the Newtend Bridge near Portland last Saturday afternoon about 3 o'clock due to the collapse of one support. The bridge fell into the Willamette River, and three people, mostly women and children, were drowned.

A great crowd had assembled to see the construction of the new bridge over the Willamette River in the vicinity of the town of Newtend, and another bridge was under construction about half a mile from the town on the opposite shore. The crowd was looking on the work as it progressed when the accident occurred. The bridge was being built on a curved line, and the section of bridge that was damaged was the second of four sections that had been completed.

The crowd was horrified when they saw the bridge collapse into the river. The accident drew a large crowd, and the bodies of the three people who lost their lives were recovered soon after the accident.

THE FINANCIAL FORTRESS OF AMERICA'S MONEY KING.

Here is a picture of the ornate to the offices of J. Pierpont Morgan Co., on Broadway and Wall Street, New York, it is on the second floor of this palatial marble building that the private offices of America's new financial leader are located.

A financial leader, he is now so difficult to reach as the big man who is commonly referred to as "P. M."

Away from the mountains and streams, and they can never be brought into a state of cultivation except by local irrigation.

Upon the "Lost" and "Found" rivers of the country the rivers-terrace theory is applied upon science. It is claimed that these rivers are in fact natural artesian wells, and that they indicate that vast bodies of water lie under the surface of the earth at many points throughout this country and that the entire nation is accessible to artesian water. The further fact that large dikes are incorporated all over the country is taken as evidential existence of the existence of underground basins and the necessity of underground basins and the necessity of artesian water. The isolated condition of the country at present and the difficulty of getting machinery into the place has prevented extensive experiments for obtaining artesian water, but the few cases reported, where only the largest apparatus for boring was used, indicate that a heavy flow of artesian water may be had at the points where experiments have been made at an unsustainably slight depth and of an abnormally quantity.

Klamath County.

Lost and Found Rivers.

Lost and Found Rivers is one of the most important and most valuable in the state. Some of the best reaches in Klamath County now lie along the stream, though in early days it was the battleground of the Indians. Along this stream more important events in the water storage system have been developed than at any other point in the country, and it was here that Ben Wright and the famous John W. Lockwood vanquished von der Decken by attacking a whole body of the Nile and killing and capturing the man, women, and children.

The river runs through a level plains, "being well watered and greatly favored. Azimuth to its friends. It is the most important river in Oregon, and its waters are sought for the "Lost" and "Found" rivers of the country. The water is always used at this point, and it is claimed that a group of men will try to bring this river down to the coast and develop it for navigation.

Across the river is the beautiful lake, which is fed by the waters of the "Lost" and "Found" rivers. The lake is surrounded by a beautiful scenery, and the approach to it is through a narrow gorge that is beautifully wooded.

The lake is a favorite resort for boating and fishing, and is visited by a large number of people each year.
