**Tips About Your Timepiece.**

A watch should be wound up every day at the same hour. Avoid putting it on a marble slab or on anything excessively cold, as the sudden change of temperature, contracting the metal, may sometimes cause the mainspring to break. The cold coagulates the oil, and the pivots and wheels, working less freely, affect the regularity of the time-keeper. In laying aside a watch be sure that it rests on its case. If suspended the action of the balance may cause oscillation, which will interfere with its going. To keep your watch clean take care that the case fits closely and see that your pockets are free from fluff which is so often given off by cotton, cloth or calico linings.
