Adopts By-laws, Appoints Working Com- mittees and Designates Next Friday Night for Next Meeting.

WILL DRAINAGE INJURE FARMS?

Mr. Thompson, editor of the Mal- tese Flaxgrower, in last week's issue of his paper, suggests a line of work that might be successfully prosecuted by a newspaper, if proper facts can be obtained, but more so for the work of our League. Mr. Thompson publishes the "Journal of Agriculture," the journal of the Society of Agriculture of the State of California, and he says that the measure of drainage, if carried through, will be injurious to agriculture, and he advises his readers to have the subject thoroughly investigated by competent agricultural observers before adopting it, and then to present the proposition to bodies of people who are able to make and have the means to carry it into effect.

The statement of Mr. Thompson is fully corroborated by the arguments of the Hon. S. K. Hall, a member of the Agricultural Society of the State of California, who says that the measure of drainage will be injurious to agriculture.

The Hon. S. K. Hall, in a recent speech, said that the measure of drainage will be injurious to agriculture, and he advised his readers to have the subject thoroughly investigated by competent agricultural observers before adopting it, and then to present the proposition to bodies of people who are able to make and have the means to carry it into effect.
