GOOD ONES WANTED.

Bestrable Feeding Cattle Scarce and Cost Too Much

Good feeding cattle were never as scarce in the United States as at pres ent. There is a plethora of ill bred, of colored stuff lying around all the martet centers, and the man with a comnission to buy a few loads of beet ype cattle in fair flesh and fit for the surposes of the flesher faces a discouraging task. They are simply not to be had in any considerable number in the open market,

Naturally in such an extremity demand centers on the kind of cattie the market does not afford. Every week a few loads of thin steers worth \$4.50 to \$4.65 are captured by a feeder buyer at Chicago, but to secure them the investor is compelled to outbid the killer. always a questionable proceeding.

At Various Markets.

At Missouri river markets feeder demand has developed the same tendency. The good ones are wanted and the others shunned. Kansas City and Omaha prices for well bred feeding cattle are practically on a parity with Chicago quotations. In territory east of Chicago there is a constant clamor for such cattle, and ten loads would they could be had.

Ruyers Conservative.

A year ago this scramble for good feeders, just before the rise of grass, sent prices skyrocketing. Many cattle were taken out at \$5 to \$5.25 that lost buyers considerable money, and the experiment will not be repeated this year. at least not while fat cattle prices are of playing." on their present low basis. Concluding this review of the feeders' situation. Breeder's Gazette is of the opinion that "as a commercial proposition the five cent feeding steer always wears a dangerous look.'

Lambs Cost Too Much.

great many feeders of lambs paid too Review. much for their stock last fall. They are blaming the present market for their loss, but most of it was made on the other end of the deal, remarks National Stockman. With lambs at \$7 per hundredweight or better the man who raised and fed his own is not losing any money-in fact, he is making some. The losers are those who got excited last fall and bought high priced feeders on the supposition that the mutton market could not be overstocked.

Planting Feed Crops.

The season for planting a succession of feed crops that will relieve the strain on the cornerib has arrived, as an exchange reminds us. Close calculations are needed to make things fit as to time of growth and maturity as well as use and soil conditions.

Sensitive Point of Sheep.

Sheep are not very sensitive to cold, but they dislike dampness. The steam from fermenting manure is particularly injurious to them, especially when confined in close pens. This should never be allowed. Let the sheep

RICHARD BURBAGE.

He Was a Great Actor and Shakespeare's Leading Star. March 16, 1618 or 1619, Richard Bur-

bage, player, died at Shoreditch, Lou-The first of the great English tragic actors, Burbage was in every way worthy to head the long roll of Eng-

land's famous players. The son of au or, the triend and companion of Shakespeare, it was through him that many of the heroes of the dramatist first spoke to the enger playgoers who througed the Globe theater. He was duction which the Missouri experiment the original of Romeo, Hamlet, Lear, station is conducting in co-operation Othello, Macbeth, Shylock, Richard III, and many other of Shakespeare's culture. ding characters, and lds name stands next to that of the great poet In the Beenses for noting granted by James 1. in 1605 to the company of the Globe theater.

His powers as an actor were not his. only claim to distinction, for he was third portion of these cattle won third also a successful painter. The fame of his abilities held a prominent place in theatrical tradition for many years, a poem in his honor, dedicated to one of the great players of the day, being written as late as the time of Charles II. His death, which was probably the

result of paralysis, caused the poets to be taken where one is bought now if surn their thoughts to his successful career, and it is from the numerous

elegies then written that most of the information concerning him must be gathered. Few players have ever had the good fortune to be so well liked by the dramatists of their time, and all praised him, one even lamenting that his death thath made a visible eclipse

A shrewd, careful man in his business affairs. Burbage left an estate producing a yearly income of £300, a large sum for a player in those days to bequeath to his heirs. Beloved and respected by all, he survived his great master by only a few years, his grave bearing the simple, expressive epitaph, Recent markets have shown that a "Exit Burbage." - London Saturday

CHLOROPHYLL.

To This Substance Is Due the Coloring of Plants.

Chlorophyll is perhaps the most important coloring substance in the world, for upon this substance depend In addition to the test of the influthe characteristic activity of plants, the synthesis of complex compounds from gain, these cattle were divided into fore Register and Receiver at Lakecarbon dloxide and water process, upon lots of eight each and fed different which the existence of all living things grain rations on pasture, one group reis ultimately conditioned. POINTS ON FEEDING

Overfeeding, like a two edged sword. cuts both ways-one in actual waste of feed, the other in the derangement of the animal's digestive system.

Ewes In Spring.

they will eat during March and April. grain, lessening the quantity gradually until about the middle of the month. I then turn them on good grass, and bow the lambs do grow !-- J. T. Drake.

Variety the Spice of Stock Feed. Though straw is generally and truly

regarded as very poor feed for stock. it is no uncommon thing to see fattening animals that are fed highly on grain and meal helping themselves to the straw stack. This is, however, only another evidence of the necessity of a great variety of food for stock.

Lambs Like Water.

The lamb will drink a good deal of pure water even while sucking the mother. It should be readily available and niways clean enough for human consumption.

Beet Pulp.

A net gain of fourteen pounds of flesh per animal from the plain pulp ration over that from dried molasses beet pulp has been obtained at the New Jersey station.

Alfalfa Straight, A considerable number of experi-

ments in Arizona with alfalfa straight rations for steers fed against combined rations of alfalfa and carbohydrate feeds indicate practically the equality of the combined feeds with alfalfa fresh and as hay, considering only the gains made by the animals fed.

TRaw Versus Cooked Grain. Many experiments go to prove that raw grains are just as valuable as, if not even more valuable than, cooked grain for swine.

Cive a Little Grain.

In the alfalfa regions of the west work horses upon the farm may be fed the year round upon no other ration than alfalfa. It is, however, generally conceded that horses, while heavily worked, should receive at least a small grain ration.

The Stanted Colt.

If the colt lacks exercise there is danger of feeding him too much, but if he is getting all the exercise he will take every day I do not think he can be overfed. If I had a colt stunted in with I would give him skim milk,

I had it, and put some oilmeal and an into his feed. I would also feed 21 some roots,-George McKerrow, isconsin.
