

## Glowing Heat From Every Ounce of Fuel

When the mercury drops out of sight, and you just can't keep the house warm, you'll find it wonderfully convenient to use a

# PERFECTION Oil Heater

(Equipped with Smokeless Device)

It's very light—carry it about—heat any cold room. Turn the wick high or low—no danger—no smoke—no smell. Easily cared for and gives nine hours of cozy comfort at one filling of brass font. Finished in nickel and japan. Every heater warranted.

The **Rayo Lamp** with its flood of steady, brilliant light is ideal for the long winter evenings—read or sew by it—won't tire your eyes. Latest improved central draft burner. Made of brass, nickel plated. Every lamp warranted. If your dealer cannot supply the Rayo Lamp or Perfection Oil Heater, write our nearest agency for a descriptive circular.

**STANDARD OIL COMPANY**  
(Incorporated)

### GOLD AND GILT.

#### Two Cows That Differed Greatly in the Making of Milk.

There is no other or easier way to find out the accurate production of each cow than to weigh and test the milk of each separately. At the Illinois agricultural experiment station are two cows, Gold and Gilt, the story of whose work is well worth telling. All the milk of these cows has been weighed and tested for three years. A record has been kept of every pound of feed consumed by each animal, both summer and winter.

Each year Gold produced on the average 11,390 pounds of milk containing 405 pounds of butter fat, but during the same time Gilt averaged only 3,830 pounds of milk with 128 pounds of butter fat.

These cows are both cared for in the same way. They were given the same kinds of feed and allowed to eat all they wanted. Gold ate one-half more than Gilt, but produced nearly three times as much milk.

Equal amounts of feed made in the one case 188 pounds of butter fat and in the other 100 pounds. The one cow produced nearly twice as much as the other from exactly the same feed in kind and amount.

Counting the butter fat at 23 cents per pound and taking out the exact cost of feed in each case, the one cow brought in a profit of \$34.59, while the other lacked \$5.62 of paying for her board at market prices of feed each year.

#### Pointers From a Dairy Expert.

In a dairy cow the skin if coarse or harsh means sluggish digestion inside, and that means an expensive cow that does not digest her food well nor thrive well.

Six per cent of the butter fat is lost when it comes to the churning if the cream is permitted to become too sour. The fat is not destroyed in some mysterious way, but it simply fails to come out of the buttermilk.

Any considerable amount of muscular exercise by a cow giving milk must tend to diminish the quantity and quality of the milk produced or at least diminish the total amount of these constituents of the product.

In the dairy especially it is essential to have the best stock that can be produced and that are adapted to the purpose for which they are kept. The high grade butter cow will not only give more and better butter than the cow of no breed, but she will do it at a less cost.

When churning proceeds too rapidly as a result of too high temperature only part of the fat is solidified and the balance or part of it is incorporated with it in an oily state; hence the reason why such butter is always soft and greasy.—Farm Money-maker.

#### The Snorer.

"Here!" growled Mr. Kadley. "What do you mean by waking me out of a sound sleep?"

"Because," replied his wife, "it was such a distressing sound."—Philadelphia Press.

#### One Reason.

She—Why have you never married? Don't you think two can live as cheaply as one?

He—Perhaps, but not as peacefully.—Yonkers Statesman.

#### In the Past.

Him—They say Miss Singleton was a beauty in her younger days.

Her—Yes, but that was so long ago she has probably forgotten all about it.—Chicago News.

#### Explaining It.

"He has a clean cut face."

"Yes; they're having a strike at the barber shop where he goes, and the apprentice shaved him."—Cleveland Plain Dealer.

### ANTIVACCINATION RIOT.

The antivaccination demonstration which recently took place in Vienna, according to the version of the Neue Frei Presse, an uprising of the rough element against the leaders of the university. When Professor Elner von Rosenstein, rector of the university, began his address at the meeting which had been called to discuss the question of vaccination hundreds of men and women interrupted him with shouts and jeers. Hundreds of students were present, and they tried to drown the voices of the rabble by singing "Gaudemus ignitur," but the uproar soon became so great that the police cleared the hall. Professor Rosenstein's address had been cut off after the first sentence, in which he said, "I am here in the name of the university to protest strenuously against a warfare made by ignorant people against science."

#### A Queer Automobile.

A queer automobile was shipped from London recently for New Zealand, whence it will be sent on board the Nimrod for the use of Lieutenant Shackleton in his dash for the south pole. The car has wheels like those used on motor omnibuses, but when ice has to be traversed the rims will be fitted with four inch spikes, set in pairs, to afford a grip. In these circumstances, too, the front wheels will not revolve, but will be fixed to broad runners resembling skis. The exhaust gases will be used to heat a snow tank on the car, thus providing a supply of drinking and washing water. The gases will also heat a foot warmer fixed to the floor of the car. Over ground similar to that explored by the Scott expedition the car could carry a crew of three men, with supplies, 150 miles a day.

#### Entertaining in an Insane Asylum.

Did you ever entertain an audience at an insane asylum? Those who have usually are able to tell experiences quite out of the ordinary. The Litchfield trio have had several amusing experiences at such places. In one case Mr. Litchfield spoke to a patient at the asylum—"Nice day; rather muddy underfoot, but nice overhead."

"Yes," answered the patient, "but nobody gets up there."

In the course of the entertainment Mrs. Litchfield gives on the violin an imitation of the church organ. That it was well done was made very evident, for as she finished there came through the stillness in clear, ministerial tones the voice of an inmate of the asylum, "Now let the collection be taken up!"—Lyceumite and Talent.

#### Two Cures For Sleeplessness.

For many years Lord Rosebery has suffered from insomnia. After leaving the house at midnight Lord Rosebery would often instruct his coachman to drive him about the streets for an hour or two in a closed carriage, that being the only way in which he could court sleep. In the wish of the sea waves, however, his lordship claims to have discovered an effective cure, and when staying at Dalmeny Lord Rosebery always sleeps at Barnbog, a house 200 yards away. This building is on the edge of the Firth of Forth, and the waves lap the sides of the tower. At high tide the spray is flung against the windows of his room.—London Tit-Bits.

### HINTS FOR FARMERS

#### To Cure Hams.

Years ago what were known as Ashland hams were made at the old plantation of Henry Clay, which enjoyed a high reputation for their superior qualities and usually commanded the very highest prices, says National Stockman. This recipe for curing was used by Mrs. Henry Clay for many years:

For every ten hams of moderate size take three and a half pounds of salt, one pound of saltpeter and two pounds of brown sugar. Mix thoroughly and rub the hams therewith on every side. Then pack in a tight box or barrel and place in a cool place for three weeks. Then put in a pickling tub or barrel and cover with brine of sufficient strength to float an egg. After remaining in this pickle about two weeks take them out, rub lightly with fine salt and hang them up in a well ventilated place to dry for two or three days, after which transfer them to the smokehouse, hang up about three or four inches apart and smoke carefully until they take on a nice brown shade.

#### Barn Itch.

A very common disease in winter is one known by various names among the cattle owners. By some it is called barn itch and by others winter itch. Simplified, we call it ringworm. Its cause is a tiny spore which abounds in the air of the stable.

Melt a teaspoonful of hog's lard and mix it with an equal amount of crude carbolic acid. Rub the affected parts well with this mixture. This is perhaps the most simple of all remedies. Another excellent remedy where the above fails is: Remove all crusts by washing with soap and water, then apply acetic acid, sulphur ointment, tincture of iodine or nitrate of mercury ointment once a day. Cleanse the stable and whitewash it to destroy the spores scattered by the crusts.—Dr. Roberts.

#### Worms In Horses.

Here is Veterinary Surgeon C. D. Smead's formula for worm powder: Mix together one pound each of granulated sugar and common salt. Use this as a base, in which mix one-half pound of tobacco dust or fine cut chewing tobacco (got the dust if possible), four ounces of powdered sulphate of iron and six ounces of powdered worm seed (santonin). As a dose for colts between four months and one year of age give a heaping teaspoonful in a feed of wheat, bran and oats. Between one year and two years give a dessert-spoonful, and for adult horses give a heaping tablespoonful morning and night for a full month.—National Stockman.

#### Scours In Horses.

For scours in horses or colts mix equal parts of tincture of opium, fluid extract of ginger, tincture muriate of iron and fluid extract of gentian. For grown horses give two tablespoonfuls in soft feed twice each day. For yearling colts give half this amount. As soon as the voidings begin to firm lengthen the time between doses, and when the excrement is firm enough to adhere cease giving the medicine. There is danger from checking scours too suddenly.—Farmers Advocate.

#### Green Cut Bone.

The feeding of fowls would be expensive when compared with the production if equalization of foods was not given attention. If an ounce of bone and meat is given, it will equal one and one-half ounces of grain; hence in feeding the hens one ounce of green cut bone daily the bill of grain must be reduced to one-half, as the green cut bone compensates for the grain and is much cheaper.—Western Poultry Journal.

#### Air the Barn Daily.

No matter how well ventilated the barn, the air will be purer and freer from germs if every door is thrown wide open daily and the old air is replaced with new. Do this while the stock is out for exercise and the stables are being cleaned, bedded and the last hay for the day thrown in. All the fumes and dust are got rid of at the same time without exposing the animals to drafts.—Farm Journal.

#### Colic In Horses.

One-half ounce of powdered charcoal, one-half ounce ground ginger and one ounce bicarbonate of soda fed twice a day is an excellent remedy to correct the tendency to colic in the horse. These materials can be obtained at any first class drug store. Have the druggist mix a quantity of the materials and divide powders so that each will contain about the amount above suggested.

#### The Stable Manure.

Don't throw the stable manure under the eaves of the stable this winter; but if it is kept until spring, it should be thrown into the shed, where the cattle will keep it packed down so as to exclude the air. However, it is better to distribute it over the sod, where it will be out of the way and will be preparing the soil for something valuable next year.

#### The Dairy Ration.

Alfalfa hay contains too much protein to make a complete ration, says Farm Journal. The best results are secured by feeding it with corn fodder, ensilage, wheat or oat straw or roots. Unless more carbohydrates (starch, fat and fiber) are thus added a part of the protein will be wasted.

#### Keep Hens Away From Horses.

It is almost impossible to destroy hen lice when they once get a start on the horse. Horses should not be quartered near a henhouse, nor should chickens be allowed to roost near the horse's stall.—Farmers Advocate.

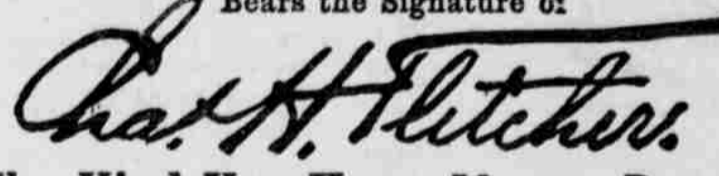

# CASTORIA

The Kind You Have Always Bought, and which has been in use for over 30 years, has borne the signature of *Chas. H. Fletcher* and has been made under his personal supervision since its infancy. Allow no one to deceive you in this. All Counterfeits, Imitations and "Just-as-good" are but Experiments that trifle with and endanger the health of Infants and Children—Experience against Experiment.

## What is CASTORIA

Castoria is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrups. It is Pleasant. It contains neither Opium, Morphine nor other Narcotic substance. Its age is its guarantee. It destroys Worms and allays Feverishness. It cures Diarrhoea and Wind Colic. It relieves Teething Troubles, cures Constipation and Flatulency. It assimilates the Food, regulates the Stomach and Bowels, giving healthy and natural sleep. The Children's Panacea—The Mother's Friend.
