# A Story and a Half Bungalow.

Design 860, by Glenn L. Saxton, Architect.

PERSPECTIVE VIEW—FROM A PHOTOGRAPH.

FLOOR PLAN.

By special arrangement with me the editor of this paper will furnish one complete set of plans and specifications of design No. 860 for \$16.

GLENN L. SAXTON.

## SHORT COATS ARE HERE.

The Modish Spring Jackets Are In Hip Lengths.

The steadily growing fashion for short coats is not a serious one to the economical woman, for one can always have a long coat cut off without interfering with its lines to a damaging extent.

Every one admits that no renovated garment is as smart as a newly created one, as all lines are designed for certain results. When they are interfered with they become awkward. When they are stopped short or elongated they are not good looking.

Understanding all this, there are women who must make the best of it because financial conditions demand it. And there are other women with whom alteration is an obsession. They

The suit illustrated contains a new spring fashion feature. The material is of hopsacking, a very fashionable fabric among the new goods.

## A LIBERAL OFFER.

Its Effect Upon the Customer to Whom It Was Made.

A business man of Dayton, O., tells this story of some commercial friends of his:

A customer who bought in a small way from the wholesalers and whose credit was not of the sort known as gilt edged visited the city and purchased a \$2,800 bill of goods, paying \$2,500 in cash and giving his note for the remaining \$300.

After the transaction had been closed and the paper and currency had changed hands the customer said:

"Now, after a deal of that size it is customary to give a purchaser a present. Come across with it."

"We'll throw in a pair of suspenders," laughed the salesman temporizingly.

"A pair of suspenders, eh? Say, quit fooling. I really mean it. I expect you to do something in acknowledgment of my patronage."

The salesman went to the manager with the problem, and the manager said:

"Well, if he feels that way about it we might encourage him a bit. We'll do something that ought to please him greatly. Give him back his \$300 note. Make him a present of his paper. That will make him a cash customer and raise his credit and save him money besides."

The salesman went back, pleased to be the bearer of such joyful tidings of liberality in business.

"Well, sir," he said, "we've arranged about that present, all right. Here," with a flourish, "is your note. We give it back to you."

The customer did not seem enthusiastic. Instead, without looking at the note he asked:

"Is it indorsed?"

"No," said the salesman in astonishment.

"Then I guess you better gimme the suspenders," said the disappointed customer.—Chicago News.

## HOW A HORSE GALLOPS.

The Natural Way and the Conventional Pose In Art.

How does a horse gallop? Owing to the rapidity of action it cannot be seen by the human eye. However, just as the individual spokes of a rapidly revolving wheel can be made visible by a flash of lightning, so the action of a galloping horse can be and has been analyzed by instantaneous photography.

The statuette of Sysonby, the thoroughbred, has been made from photographs taken at the instant when all four legs are off the ground. The back is arched, the hind feet are directed forward, the fore feet backward, so that all are tucked under the animal's body.

A SMART MODEL IN HOPSACKING.

would rather change a gown into something worse than leave it as it is. Quantity though, alteration is always considered an excellent job for an amateur. The little tailor of the home steamstren is called upon to alter a gown made by a master. Infrequently the result is excellent, but the proposition is an absurd one.

## MY OLE STRAW HAT.

I'm gettin' off'n anxious now  
To wear my ole straw hat  
What's bin hangin' in the haymow  
Since the frost laid things out flat.  
The sparrows built a nest in it,  
But I don't keer fur that  
You may wear your rovat diadems;  
Gimme my ole straw hat.  
Some sport in plugs that's two foot high  
An' think they're rite-ter-crate.  
Let 'em what wants ter play the fool,  
Gimme my ole straw hat.  
Oh, yes, a hola's clear through the top,  
She's got a ragged brim,  
But I'll be burned if I'd swap  
Fur one of stylish trim.  
It occupies no leather case  
Nor hangs on patent hook,  
But jist remember high tose plugs  
Oft kiver up a crook.  
Now shake the hayseed out of it,  
Git rid of all the lice,  
Be sure it's clear of sparrows  
An' bumblebees an' mice.  
Then take it to the waterin' trough  
An' douse it good an' deep,  
Then give it a good rub an' scrub  
An' make it clean an' sweet.  
You bet I don't git baldhead,  
With brain storms an' all that,  
I let the air blow through my hair  
Through the hole in my ole straw hat  
C. M. B.

## INCUBATING DUCK EGGS.

A duck harem should consist of one drake and five ducks, and, strange to relate, the drake only wears a curl on his tail and sings soprano. Fertile eggs come from Pekin pullets, eight months old, Hmy droppings being a sign of the egg debut, and these eggs should hatch in twenty-eight days if fresh, fertile and incubated correctly, unless you have roughly washed off the gloss.

Ten duck eggs are enough for a hen to cover, and they should be sprinkled occasionally.

Run your duck incubator at 102 degrees the first week, 103 degrees the next two weeks and 104 degrees the last week, and keep temperature even, for overheating especially means duck disaster.

Turn eggs and change trays twice a day from the fourth to the twenty-sixth day, and sprinkle with tepid water every day.

Run brooder at 90 degrees for first two days, and gradually reduce heat. Ducks require less heat than chickens, and brooder lamps need not be burned long.

## RATIONS FOR DUCKLINGS.

Ducklings should be fed after twenty-four hours' fast at 6 and 10 a. m. and 2 and 6 p. m.

For first forty-eight hours keep feed before them and have water handy to feed trough, as ducks drink and eat at same time.

## MASH RATIONS.

As ducks have no gizzards they are fed crumbly mash, and this promotes quick growth.

Mash for the first week: Two parts cornmeal, two parts wheat bran, two parts wheat midds and 8 per cent coarse, clean sand.

From seventh day to two months old: Equal parts cornmeal, wheat bran, midds, 12 per cent of bulk beef scrap, 8 per cent sand and, if confined, 15 per cent green food.

From two months to seventy days, fattening ration: Three-fourths cornmeal, one-fourth midds, 15 per cent of bulk beef scrap, 8 per cent sand.

When mash is prepared in 15 gallon milk cans.

When ducks are prepared for market eat greens and soiling and only eat what they eat up with a relish.

## FEATHERS AND EGGSHELLS.

Young chicks feed companies do double stunts at running in grit, corn, dust and "leftovers." Grit bought at 35 cents and sold at \$2.25 is pretty high. Corn makes yellowbacks. Dust and "leftovers" kill chicks in their tracks.

You should have a never clog sprayer for whitewashing your plant. Then at housecleaning time when wife says, "Won't you whitewash the cellar, John?" the job will move along like a merry bird song.

"And just think of it! I was defeated at the show by a woman!" Say, fool man, where were you brought up? If this is your first defeat by fair female you must have just arrived from the Isle of Man.

It is stated that eagles soar to a height of 6,000 feet, while crows make their top notch 4,000. They frequently condescend to descend to offend by snatching chickens off the ground when Johnny and his gun are not around.

Mrs. Charlotte Gilman, the sociologist, declares that woman is man's horse. We once heard of a man who married a "nag" which, to say the least, did not show very good horse sense. That poultryman are experts at prize mating is shown by the fact that they and their running mates are not seen kicking over the traces in divorce courts.

A York (Pa.) pullet laid as her first egg a white globe six and a quarter inches around the middle, seven and seven-eighths inches around the long way and weighing three and a half ounces, just twice the ordinary weight. May her tribe increase.

The late poultry shows were very popular outside the ranks of chicken cranks, for which the public will please accept our hearty thanks.

The best litter for chicks is clean, dry wheat straw cut in short lengths by the clover cutter. Dusty haymow chaff is bad scratching material.

The state legislatures have been busy removing the fifty dollar fine for killing the American eagle. It makes little difference to these parts, for eagles, especially golden eagles, are scarce as hens' teeth.
