DR. GRANT LYMAN HELD IN BIG BOND

Klamath Chronicle. Dr. John Grant Lyman was held for the United States district court of Oregon yesterday by U. S. Commissioner R. M. Richardson on \$25,000 bonds. The procedure to follow will be to seek an order of removal from the Oregon U. S. District Court to the northern district of California, in which jurisdiction the prisoner's alleged crimes were committed. The hearing before Commissioner Richardson was on a charge against the physician promoter of being a fugitive from justice and of having entered into a conspiracy to break jail. W. W. Spurrer, guard at the Providence hospital in Oakland, told of Lyman's escape. He stated that he was working under the instruction and direction of U. S. Marshal E. L. Elliott, Lawrence Galindo, the chauffeur who engineered the escape of the accused with the assistance of Thorne, now a fugitive from the county jail here, told of bringing the doctor from Oakland to Sacramento. His arrangements were made with Thorne, who told him that Lyman wanted to get away hurriedly so as to secure a divorce from his wife. He told of being paid \$55 for his work.

Everett A. Johnson, U. S. District Attorney, conducted the case on behalf of the Federal Government. He introduced the indictment to show that there was evidence of a conspiracy. This, Attorney C. F. Stone, for the accused, objected to. The government, he said, was not entitled to inject testimony concerning any act in furtherance of an alleged conspiracy until prima facie proof of the conspiracy was shown. Mr. Stone insisted that elementary rules of evidence sustained the theory that an indictment did not warrant a presumption that a conspiracy existed.

Commissioner Richardson overruled the objection.

Galindo gave a minute description of the escape of Lyman and his part in it, aided by Courtwright and Thorne, and how he cranked up his machine according to the program arranged between Thorne and himself so that when Lyman would emerge from the hospital he would be in readiness to start the wild race for liberty. This was to follow a signal by placing a light in the hospital window.

He recited a lot of particulars concerning the amount of money he had received and the manner and amounts of each payment, including \$1 for breakfast. He said Thorne and Lyman eluded him in Sacramento without fully paying him off.

In a recent interview Lyman gives the following graphic account of his escape:

"I was making for Idaho when I was caught. No, I had no wish to go to Canada, although I really had no objective point. I was as anxious to get as far away from Alameda county jail as possible, because my case is one where distance lent enchantment to the view. In order to have hospital treatment for my leg I had to pay for it, and it was also insisted upon that I should pay for the guard. It made me vexed to think that in my lame condition I should be compelled to pay for being watched. I simply concluded that getting out of Providence hospital was so easy that I would avail myself of the opportunity.

"As to my being a desperate man, I never used a revolver nor knew how to use one. A revolver that I had in my grip I turned over to Thorne on the way up here. He sat in the front seat of the car with the driver, while I sat in the back with my bad leg wrapped and padded so that it would ride easy. There were lots of gray squirrels in the woods we passed through, and Thorne amused himself by shooting at them. When we got to Lakeview I gave the revolver to the deputy sheriff there, making him a present of it."

"It has been amusing how close I have been to people on the way from San Francisco to be able to keep free so long. In one town the officers were three hours ahead of me, but missed me at that. In Sacramento I was around the town two hours shopping. I was very close to the police station for quite a while. I ate breakfast in a cafe there, and as a waiter saw I was poor at handling crutches he remarked that I was evidently unused to them."

Fighting Frosts

The report of the frost fighting experiments in the Rogue River Valley conducted by the horticulture department of the Oregon Agricultural College has just been published in a bulletin of 64 pages by Prof. C. I. Lewis and F. R. Brown.

The results of these studies lead the college authorities to advise oils with a paraffine base in preference to those with an asphalt base, since the latter leave a residue in the heaters which will not burn, thus decreasing the burning time in each heater. At least one thermometer should be used to the acre. The average cost per acre for four hours is \$5.10 for oil and \$5.40 for wood. Oil is the best fuel. It is thought since it is handled with less labor and maintains a more even temperature.

NEW GEOLOGICAL SURVEY IN ALASKA

West of Koyukuk and Yukon rivers in Alaska a large area has long remained geologically unexplored. In a portion of this region an exploration party from the United States Geological Survey worked during the season of 1909, and the results of the studies there carried on and extended as far as Council, in Seward Peninsula, are set forth in Bulletin No. 449 just issued by the survey. The party consisted of Philip S. Smith and H. M. Eakin, geologists of the Survey and authors of the report. A. G. Winegard, packer and a cook. Supplies for a month were shipped to Nolaof, the point from which the expedition set out, and other supplies, sufficient to last the rest of the season, were sent to Nome and then transported to the mouth of the Koyuk and there cached to await the arrival of the party.

The area traversed by this party was selected for survey because it was thought that the metaphoric rocks of the Seward Peninsula might occur within it, which would give presumption of the presence of gold deposits.

In addition to exploring the region east of Norton Bay the party carried the topographic and geological mapping into the southeastern part of the Seward Peninsula, thus extending the areas mapped by the Geological Survey in earlier years. The report is a volume of 140 pages, describing the topography and geology of the area and containing notes on its climate, vegetation, game, and fish. Some 40 pages are devoted to the mineral resources—placer and lode gold deposits and prospects, and silver lead, copper, and coal. It is illustrated with photographs and brief sketch maps and contains also a topographic reconnaissance map of southeastern Seward Peninsula, on the scale of 4 miles to the inch, a colored geological map of the same area, and a colored geologic map of Nulato-Norton Bay region, on the scale of 8 miles to the inch. Bulletin 449 may be obtained on application to the Director of the United States Geological Survey, Washington, D. C.

RAPID INCREASE IN IRRIGATION

Washington, D. C., Oct. 9.—Census Director Durand issued today the first official statement from the Census Bureau relative to the statistics on irrigation in Oregon. It is based on a preliminary comparative summary submitted by Dr. Le Grand Powers, chief statistician of the division of agriculture in the Bureau of the Census, under whose supervision it was prepared by R. P. Teale, special agent in charge of irrigation.

The total number of farms irrigated in 1909 was 6,669, against 4,636 in 1899, an increase of 2,033, or 43.3 per cent. Within the same period the number of farms in the state had increased 27 per cent indicating that irrigation is increasing more rapidly than dry farming in the state.

The total acreage irrigated in 1909 was 686,129 acres, against 38,310 acres in 1909, an increase of 29,719 acres, or 76.7 per cent. During the same period the improved acreage of farms increased 24 per cent, indicating again the rapid advance of irrigation. The area irrigated was 16.1 per cent of the improved land in farms in 1909 and 11.7 per cent in 1899.

The total acreage which all enterprises were capable of irrigating in 1910 was 30,526 acres, an excess of 144,397 acres over the area irrigated in 1909. The acreage included in projects either completed or under construction in 1910 was 2,527,208 acres, an excess of 1,841,079 acres over the area irrigated in 1909. This indicates the area which will be available within the next few years for the extension of irrigation, and shows that the area irrigated can be almost tripled without the construction of additional works.

The number of independent enterprises reported in 1910 was 5,649 miles against 2,283 miles in 1899, an increase of 3,366 miles, or 147.7 per cent. The number of reservoirs reported in 1910 was 276, having a combined capacity of 1,317,370 acre feet. The number of wells pumped for irrigation was 91 and the number of pumping plants 229. The engine capacity of pumping plants was 328,730 horsepower. The acreage irrigated with pumped water was 5,711 acres.

The total cost of irrigation systems reported in 1910 was \$12,689,044, against \$1,843,771 in 1899, an increase of \$10,845,273, or 59.02 per cent. The average cost per acre in 1910 was \$15.28, against \$4.75 in 1909, an increase of \$10.53, or 221.7 per cent. The average cost of operation and maintenance per acre in 1899 was 75 cents, against 22 cents in 1899, an increase of 53 cents, or 24.09 per cent.

Streams supplied 646,866 acres, or 94.3 per cent of the total acreage irrigated in 1909; lakes supplied 23,736 acres, or 3.5 per cent; wells supplied 1,460 acres, or 0.2 per cent; springs

BIG INCREASE IN O.A.C. ATTENDANCE

Registration figures at the Oregon Agricultural College shows a total of 940 students this year as against 679 a year ago, an increase of 261. Many have been delayed in matriculating and it is impossible yet to say what the total of students will be.

Complete figures are now available from all the departments at this time, but without an exception, they show an increased percentage in numbers over former years. The forestry department shows a gain of 20 per cent and the domestic science department a gain of 10 per cent in registrations so far over their total registration of last year, while the horticulture department has registered 242 students to date, compared with 192 for a year ago.

Two hundred girls have already registered and, most of them in the domestic science department. Waldo Hall, the girls dormitory, has 174 students whereas last year the total number there, including students and instructors, was 10.

Not only in size but also in the large percentage of high school graduates, is the freshman class attracting attention. This latter fact is a source of great joy to the faculty as the students come so much better prepared to undertake the required work for their degree.

San Diego's Exposition

It may be thought by some that the two Panama Expositions are in some way related; that one is in a sense a branch of the other. This is not the case. While the management of each is working in cooperation and friendship with the other, each is distinct and separate, each has its own board of managers and each is financed separately. They both will celebrate the opening of the Panama Canal, but they will do it in different ways, and there will be a friendly rivalry to see which one will prove of greatest interest to the public. The managers of the San Diego Exposition believe that they will produce an aggregation of attractions which will be absolutely unique. The group of exposition buildings will, of themselves, be an attraction which it would be worth crossing the continent to see. They will embody all the best and most artistic in the old, but still new style of architecture which the old Mission fathers introduced when they undertook to evangelize the new land of California. Known as the Spanish Renaissance, this style will be standardized and the exposition buildings will present the best ideas by the leading architects in the world who specialize in this style.

One of the finest hospitals on the Pacific Coast has just been completed by the Catholic Church in Seattle. This charitable institution represents an investment of a million dollars. It can accommodate 300 patients and forty nuns. It occupies an entire city block and is modern in every respect. It replaces the old Providence Hospital, the name having been retained.

supplied 10,788 acres, or 1.6 per cent; and reservoirs supplied 3,279 acres, or 0.5 per cent.

SHOES OF MY OWN MANUFACTURE SUITABLE FOR HARD USAGE FOR SALE

If you cannot be fitted properly, or you have bad feet, I'll make you a pair of Shoes or Boots to measure that will fit you, and will make them, if necessary, in one day. I absolutely refuse to make Dress Shoes be-

cause I am not equipped for it, but if you want a pair of Shoes that will wear, you can get them here at reasonable prices. Nailed bottom Shoes from \$5.00 Hand-sewed welts from \$6.00 Satisfaction Guaranteed.

LEO HASEL, SHOEMAKER, LAKEVIEW, OREGON

LAKE COUNTY ABSTRACT COMPANY Incorporated.

A Complete Record

We have made an entire transcript of all records in Lake County which in any way affect Real Property in the county. We have a complete Record of every Mortgage and transfer ever made in Lake County, and ever filed there.

Errors Found in Titles

In transcribing the records we have found numerous mortgages recorded in the Deed record and indexed; and many deeds are recorded in the Mortgage record and other books. Hundreds of mortgages and deeds are not indexed at all, and most difficult to trace up from the records.

We have notations of all these Errors.

Others cannot find them. We have put hundreds of dollars hunting up these errors, and we can fully guarantee our work.

J. D. VENATOR, Manager.

BUCKS! BUCKS!!

"NOTICE TO SHEEPMEN"

I will be at Lakeview about September 25th with 800 head of the Baldwin Sheep & Land Co.'s Rambouillet Rams from Hay Creek, Oregon.

These Rams are noted for their size and shearing qualities. The most perfect type of Mutton and Wool Sheep combined in the world.

Sheepmen wanting Rams this season will do well to wait and see this lot, as the price as well as the Bucks will be right.

I also have a fine lot of pure bred Cotswool Rams that I will deliver at Klamath Falls in numbers to suit purchaser.

For prices and terms, address:
