SEWER, NECESSITY, SAYS ENGINEER

John P. Cook Gives Some Pointers in Regard To Sewer Disposal

Following is a letter from John P. Cook, sanitary engineer formerly of Lakeview but who is now employed by the Pacific Gas & Electric Company of San Francisco, to E. L. Britten, president of the Lakeview Commercial Club, in regard to a sewer system for Lakeview: Mr. Cook brings out some forceful points of interest to citizens of Lakeview and the communication is well worth reading. He is a man of thorough knowledge in his line and by experience knows whereof he speaks.

4329 Kirkham Street, San Francisco, Cal., Sept 5, 1912.

I read with regret that the people of Lakeview have decided for the present not to install a water carriage system of Sewage Disposal. You will agree with me that to encourage people from the outside to settle in a town, the town must be up-to-date proportionately to its population. With a population of—say 1600—the time has certainly arrived when all old fashioned and unsanitary means of so-called "disposing of sewage" should be eliminated, and an up-to-date and efficient system installed.

It may be news to you of the several diseases that originate through the media of foul smelling privies, sink wastes, cesspools and earth impregnated with the contents of a cesspool; and the fact that the people of Lakeview have escaped an epidemic of these diseases, does not alter the fact that they will always be so fortunate. Quoting an old proverb: "Prevention is better than cure" is I consider, admirably fitted for the case in point.

Apart from the question of draining Lakeview for its present population is not a valuable, and I might say, one of the best recommendations to influence people from the outside, who are contemplating the advantages and disadvantages of the town, with the idea of either residing or building.

A very good example of the necessity of a properly drained town is in a large building, now in course of erection in Lakeview, gallons of liquid filth will be stagnant giving off foul gasses within a few yards of dwelling houses, public highways etc. Is this an effort to promote sanitation? It may be such that the liquid will be enclosed in a cesspool and covered up, but again quoting a proverb "Out of sight out of mind," which appears to the question. The cesspool has to be emptied, thereby, simply moving the disease breeding liquid from one place to another.

From another standpoint, that looks more unightly and immoral than a privy built within a few yards of one's door or window, and in full view of the surrounding houses and people on the highways? How much more convenient—especially in times of sickness—to have a properly lighted and ventilated water closet inside the house, and with the assurance that with ordinary cleanliness, all liability of contracting any diseases from this source are practically impossible?

Now you people of Lakeview if you wish to boost your town, you must be in a position to offer a town that is up with the times, and an efficient system of sewage disposal is certainly an essential feature.

A great deal more might be written

NEW DRAINAGE SYSTEM

Concluded from page 1.

view was at the High School Building. This building having no outlet, the Supt. was asked to look up the matter and put in such a tank. While he was in Portland after his first visit to us he found a man who is authority on septic tanks, having read much of the literature and had much practical experience in building them. From this man, F. M. Starrett, of Forest Grove, Prof. Gardner got a plan of a tank suitable for our school and on his return proceeded to put it in.

There is no particular secret to it and this one at the school house was put in by day laborers with some overseeing by Superintendent Gardner.

The real secret is the tank must be quiet not disturbed by water, absolutely dark; never freeze and air tight from the outside. This school tank is so made that it fills all the requirements and is without doubt one of the best if not the best septic tank in Lakeview. The tank has four compartments each three by four feet square and six feet deep with walls and partitions made of concrete work. The compartments are connected by siphons which enter down the walls on each side for 18 inches, the outlet is on a level with the inlet which secures quiet in the tank.

A filter bed is made at the outlet of the tank and is large and filled with many wagon loads of rocks.

In order that all might be tight the top is arched over with brick and cemented then covered with two feet of dirt.

For home use the compartments may be smaller and fewer thus reducing the expense. Any one who has time to dig a hole in the ground haul some sand and gravel, get a little cement and do a little work may have a good, first-class, septic tank which is perfectly sanitary and never has to be replaced and the cost may be very small indeed.

Supt. Gardner would be glad to answer any questions he can about this matter and will assist any one interested by giving plans for the work, which may be followed by anyone.

MORAN PRAISES COUNTRY

Continued from first page

this side of Madeline plains, to Alturas in a buckboard. It looked like a hard problem, but now the extension to Lakeview links the productive districts together and make a railroad not only a need, but a good investment.

"All the country needs is more settlers. It has the resources and the means of transportation. We will keep up with the growth."

As to the change in the directorate, Mr. Moran stated that he consented, reluctantly, to the resignation of A. H. Manning, who asked to be relieved, owing to advancing age.

"Mr. Manning has always been prompt and attentive at meetings," said Mr. Moran. "He has been with us from the beginning, but we did not feel that we should insist on his retaining the place when he desired to lighten his cares."

The directors elected at the annual meeting were D. Comyn Moran, A. D. Moran, T. F. Dunaway, W. H. O'Neil and P. R. Dunbar. The directors chose Comyn Moran, president; T. F. Dunaway, vice president; A. D. Moran, treasurer, and P. R. Dunbar, secretary.

on this subject, but I thought these few lines would be of interest to those who wish to see a progressive town.

Yours truly,
John P. Cook, Associate of the Royal Sanitary Institute of Great Britain.

ANOTHER PAPER FOR LAKE COUNTY

The Irish News Will Be Printed in Lakeview About October First

The latest paper to be launched in Lake County is The Irish News, the first issue of which will be gotten out the first week in October. The periodical will be published monthly in Lakeview. It will be a four page six column paper and will contain news exclusively pertaining to the Irish element. The paper is fostered by some very bright and promising young men of this city and needless to say it will be heartily supported by every Irish boy of the county and many in the old country. Aside from local news considerable matter will be handled pertaining to parliamentary doings in Ireland and some news for the boys.

Much of Lake county's population is

made up of Irish, some of whom are among the heaviest taxpayers of the county. They are a whole-souled bunch of optimists who always write success across their efforts, and now that by their energy and progressiveness they are going to have an official organ in the way of a live newspaper is not only a novelty but a credit to their populace. The Examiner hopes and predicts that The Irish News will be like the Irish Picnic, a grand success.

Pupils Start Now

In order that the school work may be smoothed this year and the teachers may accomplish better work it is thought best not to have a class enter the primary first year work in January.

Parents having children who were to start in the middle of the year please start them now even if they are not quite six years old. This will be better for the child and will give the teacher a much better opportunity to give the proper work.

E. O. Lamb, sheepman of Paisley, is spending the week in Lakeview.

"Grandma" Stephens Ill

Mrs. Mary Stephens, who lives with her daughter, Mrs. G. Sherman Easter is reported quite ill. "Grandma Stephens, as she is familiarly known in Lakeview, is in her eighty-fourth year and her illness is attributed to her old age. Lafa Stephens, of Lompoc, Calif., Mrs. Neva Kimball, of San Francisco, Calif., Mrs. Delia Ringo of Salem, Oregon, and Mrs. Virilia Phelps, of Portland, Oregon, children of Mrs. Stephens are here to be with their mother during her illness. Mrs. Ed Tatro, another daughter, of Gaston, Oregon, was also sent for but was unable to come. "Grandma" Stephens is a great favorite among her acquaintances and her many friends sincerely hope she will rally, and yet live to enjoy many more useful years.

A news item from Fort Rock in the northern end of the county contains the information that about 400 acres of grain will be threshed in that section this season, and that considerable hay has been put up. Chrisman and Schroder of Silver Lake will do the threshing.

High School Notes

F. E. Dunton, of Eugene, has arrived and assumed his work in the High School. Mr. Dunton is a graduate of the U. of O. and will have charge of Science and Mathematics.

Miss Maude Knight the seventh grade teacher was indisposed Wednesday, her ride from Klamath being very tiresome.

Supt. J. Q. Willis assisted in the opening of school Monday, by taking a grade that had no teacher.

If a sufficient class can be organized the High School will furnish a conservatory graduate of several years successful experience to give piano lessons in our town.

Any one wishing to take lessons of a first class conservatory teacher will please see or address Supt. Gardner.

H. W. Graeber was in from his home-stead on the head of the lake the first of the week. He has builded a comfortable home on his place and is getting his land well under cultivation. He finds his land well adapted to raising potatoes, onions and grains.
