Your Patronage is Respectfully Solicited

LAKE COUNTY ABSTRACT COMPANY
Incorporated.

A Complete Record

We have made an entire transcript of all Records in Lake County which in any way, affect Real Property in the county. We have a complete Record of every Mortgage and transfer ever made in Lake County, and ever Deed given.

Errors Found in Titles

In transcribing the records we have found numerous mortgages recorded in the Deed record and indexed; and many deeds are recorded in the Mortgage record and other books. Hundreds of mortgages and deeds are not indexed at all, and most difficult to trace up from the records.

We have notations of all these Errors.

Others cannot find them. We have put hundreds of dollars hunting up these errors, and we can fully guarantee our work.

J. D. VENATOR, - - - Manager.

The Beauty of Corn-Fed Hogs

is that not alone does their flesh taste sweeter, but you feel that it is cleaner than the swill fed kind. Our hams, bacon, sausage, etc., come from corn-fed hogs. Once you try them, you will never again be satisfied with the other kind.

CORRESPONDENCE SOLICITED

[These articles and illustrations must not be reprinted without special permission.]

FEED MEAT FOR EGGS.

Biddy doesn't chase that jackrabbit grasshopper across the field for fun. Her system and egg factory demand the natural protein that's in that lively, juicy bug.

A hen's comb blooms like a rose in spring, and she just shells out eggs, because then the insect world comes to life, and she fills up on bugs and wigglers. The natural protein does it.

For the same reason in winter her comb gets red, and she hustles out the high priced eggs when you feed her meat in addition to grain.

Protein in the meat stimulates her ovaries to make more yolks and her oviduct to secrete more albumen.

Meat in some form when natural protein is not obtainable should be fed.

It makes young stock grow faster, stronger and larger, matures broilers

PICKING A SHIN BONE.

quicker, makes pullets lay earlier, makes hens lay more eggs, cuts down infertility, cuts down the grain bill, promotes hen health and is a preventive of feather and egg eating.

The white of an egg is 88.92 per cent protein and the yolk 39.62 per cent, and a hen requires much protein to keep up the bodily functions.

Many disregard these facts and feed no meat in winter. Thus hens suffer and egg production is low.

Most content tables range the protein content of meat products as follows:

Meat scrap, 66 per cent; dried blood, 52; dried fish, 44; animal meal, 32; fresh cut bone, 18 per cent. Dried fish is generally fed to ducks.

Analyses of different brands show a wide difference in composition of meat

A GOOD BONE CUTTER.

products, and they should not be purchased except on a guaranteed analysis. Animal meal generally has less protein and more powdered bone than scrap, while scrap is apt to have more fat.

All must be watched for taint, especially in hot weather, as damp and heat soon spoil them, and some firms are not even above shoving off tankage and slaughter house refuse on the trade. For this reason many poultrymen use fresh cut bone or milk products.

While not so rich in protein, they are cheaper, more palatable, and the fancier knows they are fresh.

Meat in these forms should be fed sparingly at first until the hens are accustomed to it.

DON'TS.

Don't fail to present that boy with some pure bred poultry. It will give him pleasant employment and much enjoyment.

Don't be a dreamer nor a mean schemer. To make the wheels of success whiz stick to biz.

Don't join the No Advertise club. If about to do so first phone the business undertaker.

Don't keep more male birds than are needed for the breeding season unless you are selling stock birds.

CLUBBING OFFER
