WEST WOULD START PACIFIC HIGHWAY

Governor Plans For Unemployed to Work Central Oregon Road.

With the view of providing employment for the unemployed in Portland, Governor West has submitted to the State Highway Commission a plan calling for the expenditure of \$30,000 from the state highway fund in building a road from Wasco to Biggs.

Accompanied by State Highway Engineer Howley, Governor West inspected the route of the proposed highway last Sunday, and both declared that climatic conditions were such that work could be commenced immediately. Sam Hill has expended \$2000 in surveying the route, which is 9 1/2 miles in length. It would constitute a link in the Central Oregon Highway, the construction of which the State Highway Engineer has recommended to the commission.

Two plans were discussed—one to issue unpaid warrants, and re-levy them when the appropriation for the State Highway Commission is available in April, and the other to prevail upon someone to advance the money and draw warrants on the appropriation when it is available to reimburse such person. The building of the road would be by contract. Neither Secretary of State Olcott nor State Treasurer Kay oppose the plan, but ask for more time to consider it, and another meeting will be held.

OREGON'S MINES MAKE INCREASE

State Has About Fifty or Sixty Paying Deep Mines.

The mines of Oregon made a somewhat unexpected large increase in gold yield for 1913, compared with 1912. The mine report of 1912 showed a production of \$770,041, (a material increase over 1911) but the preliminary estimate for 1913 made by Charles G. Yale, of the United States Geological Survey, shows that the gold output nearly doubled in 1913, amounting to \$1,393,322, or \$623,281 more than in 1912. The mine output of silver in 1912 was 57,081 fine ounces, while the estimate for 1913 shows a yield of 218,949 ounces, an increase of 161,688 ounces.

The copper output in 1912 according to mine returns was 260,429 pounds; the estimate for 1913 is 144,796 pounds, or 145,633 pounds less than in 1912. The mine report of 1912 showed a yield of 39,317 pounds of lead, but for 1913 the estimate is 96,743 pounds, an increase for the year of 56,426 pounds.

While the hydraulic mines of Oregon are large producers and there are about 100 of them among the 160 producing placer mines, the increase of gold output for 1913 comes mainly from the deep mines, of which there are 50 or 60 producing in the State.

The most productive deep mine in the State is the Columbia, at Sumpter Baker County. Other large deep mines are those of the Highland Development Co. at Baker, the Commercial Mining Co. at Rye Valley, Baker County, and the West Coast Mines Co. at Champion, Lane County. The average values of the ores treated in Oregon have been increasing materially in the last few years. A very large percentage of the gold produced from deep mines in Oregon comes from Baker County, though Josephine County leads in output of placer gold. Very little of the Oregon ore is shipped to the smelters, most of it being worked in local mills at or near the mines.

There are about 30 active quartz mills in the State, with a daily capacity of about 1,100 tons. It will be a matter of great encouragement to the miners of Oregon to know that so large an increase of gold yield is apparent for the year 1913, even if the increase does come from a few of the older mines and not from new ones, and it may attract attention to the gold-mining industry of the State in which capital is needed for development and operation of mines and mills.

BENSON, CANDIDATE

Continued from first page

try that have been presented to him, the judge is especially fitted for the Supreme Court. Both lawyers and laymen realize and appreciate the importance of having on the Supreme Bench a number of men who are familiar with those problems and conditions that are found to exist in that great country east of the Cascade Mountains which is designated by the general term Eastern Oregon.

Judge Benson knows these conditions and at the same time is very familiar with the problems of Western Oregon. It is almost impossible for the judge whose life has been spent in Western Oregon to properly appreciate the range and water problems of this great eastern Oregon country. Judge Benson is in the happy situation of having lived in Western Oregon, and now being a resident of both southern and eastern Oregon, for while his district is in the extreme southern part of the state it is also in that country lying east of the Cascade Mountains which has problems common to all of Eastern Oregon.

The Supreme Court today is composed of seven members. Of these Chief Justice McBride and Judges Burnett, Moore, Ramsey and McNary (the latter two appointed by Governor West) are residents of the Willamette Valley, and only two, Justices Eakin and Bean are from Eastern Oregon, and yet those legal tangles which require in the mind of the judge an intimate knowledge of local conditions very largely go to the Supreme Court from the Eastern Oregon Country. There is not a single member of the Supreme Bench from Southern Oregon. It is high time that Southern Oregon should be represented upon the Supreme Bench of Oregon, and it would be a very happy solution of the problem to have southern Oregon's representation on the Supreme Bench a man who is familiar with the problems of Eastern Oregon. Judge Benson is this and more. He is a real lawyer and would be an honor to the Supreme Bench of the State of Oregon.

This is an opportunity for the people of Southern and Eastern Oregon to get together regardless of politics and place on the Supreme Bench that man whom the people of this judicial district have learned to revere and admire as one of the finest gentlemen and ablest jurists within their acquaintance. We predict for Judge Benson a flattering and enthusiastic support for the office of Supreme Judge.

GAELIC TEAM MET DEFEAT WITH L.H.S.

Champions Challenged to Another Game For Tomorrow Evening.

The basketball fans of Lakeview were given a rare treat last Friday night when the L. H. S. defeated the Gaelic team at the Snider opera house. The High School boys won by a score of 31 to 16.

The floor was very smooth which made good team work impossible. The boys say that, with Mr. Snider's permission, the next game will be played on ice skates. The game, nevertheless, proved one of the cleverest that has been played here, there being but one foul call during the game. The lineup was as follows:

L. H. S.	Gaelic
Pendleton.....C.....	Welsh
Funbar.....F.....	Welsh
Corbett.....F.....	O'Shea
Bartling.....G.....	Daily
Thruston.....G.....	Breen
Fridly.....Sub.	

The game was followed by a social dance, music for which was furnished by the Lakeview band.

The Lakeview Athletic Club challenged the High School team, and the game will be played at the opera house tomorrow evening.

Two Strong Films

Patrons of the Snider Opera House picture show have this week been treated to a succession of exceptional and intensely dramatic productions which have never been excelled in Lakeview, but more are in store.

On next Sunday evening will be shown Edison's Historical drama of the life story of Mary Stuart in three reels. The beautiful and much loved Mary Stuart, Queen of Scotland, is one of the most unfortunate and pathetic characters in history. Born in Scotland, educated at the court of Francis II of France, whom she married at fifteen, Queen of France at sixteen, widow at seventeen, beginning her reign as Scotland's Queen at eighteen, married to Darnley of the Royal Blood at nineteen—her life began amid turmoil and disaster, and followed a course of martial dissensions, mixed with political factions and religious contentions which led to and ended upon the scaffold of Queen Elizabeth. The story is dressed to the last detail as Edison knows how, and is intensely interesting from opening to close.

Tuesday evening a masterpiece of the Kalem company, "Shenandoah"—in three reels, will be shown. "Shenandoah" is claimed as the masterpiece of motion picture achievement, using over a thousand people in the battle scenes, and its production cost a small fortune. Among other items it shows the historic bombardment of Fort Sumpter, Sheridan's historic produced on the same road out of Winchester, the awe inspiring Battle of Winchester, and charging cavalry and feats of daring galore.

Both "Mary Stuart" and "Shenandoah" have set a mark for motion picture producers to aspire to. Every picture patron will be glad to have seen these films and under no circumstances should any student of history miss them. The usual admission will be charged.—Adv.

INCOME TAX LAW AIDS FORESTRY

Timber Land is Exempt Only When Product Realizes a Profit.

Washington, Feb. 3.—Foresters and lumbermen see in a decision of the Treasury Department in regard to the administration of the income tax a strong argument for forestry. As they interpret the opinion of the Treasury officials they understand that no timber lands shall be subject to the tax until the timber is cut and marketed and that then the profit only will be subject to an income tax assessment. In other words, all costs will be deducted before the tax is levied, and these will cover the cost of growing the timber, including the cost of planting where necessary and of protecting the growing crop from fire and other depredation.

This decision was based upon a request for information made by P. S. Ridsale, secretary of the American forestry association. He asked if there would be a tax on the yearly growth of timber whether it was cut or not, and also whether an income tax would be assessed on the value of the timber land. In reply, the Treasury Department said that "the gain from the cutting and disposal of stumpage is realized in the year during which the timber is cut and disposed of and that the amount received in excess of the cost of such timber is profit, and should be so accounted for as an income for that year."

SCHOOL CHILDREN WILL GET PRIZES

Boys and Girls Have Opportunity to Attend Fairs Free.

The boys and girls of Oregon who will earnestly strive to make themselves proficient in potato growing, raising corn, vegetables or pigs, sewing, cooking and baking or in keeping farm and dairy accounts may find themselves entitled to a reward well worth their best efforts. The Agricultural College, co-operating with the State Superintendent of Schools, is planning to give to at least two boys from each county in the state a trip to Salem for the entire week of the State Fair. In addition, at least ten of the highest scoring prize-winners will have all their expenses paid on a visit to the Panama-Pacific Exposition at San Francisco next year. It is expected that industrial clubs will be organized in nearly all the schools of the state and these clubs will be entitled to bulletins and information and advice of every sort regarding any line of work they may decide to take up. In the gardening contest fractional tracts must be cultivated and accurate records of every detail of the work and its results must be kept. It is hoped that a large percentage of all the school children in the state will take part in this contest.

Simon Juanto came in town the first of the week from his sheep camp near Valley Falls.

THIS is the time of the year when attention should be devoted to your season's

ABOUT SYMPTOMS AND TREATMENT

Vaccination is Certain to Make Horses Immune From Distemper.

By H. H. SPARHAWK
U. S. Veterinary Surgeon

Continued from last week

Symptoms—Loss of appetite, fever, swelling of glands in head and ruptures of glands with pus discharges. Animal pokes out head to relieve pressure in swollen glands. Animal sensitive to touch around angles of jaws. Constipation after several days with fetid odor. Fever raises from 100 degrees F. normal, to as high as 105.8 degrees F. and after several days of this fever with out medical aid the functional organs are over heated and weakened for life. The kidneys and heart become weak and albumins pass thru the excreta in large quantities.

Complications are from a mere pus discharge to swollen glands in throat the influenza, bronchitis, and pneumonia. Frequently the lymphatic glands become infected throughout the body and as a result a breaking down by pus and discharges on legs, rump and pectorals. If the glands in the neck and throat become large and proper attention is not given them, the abscesses break on the inside and the pus is swallowed, as is frequently seen in colts, the digestive tract becomes infected and then large abscess formations are formed. As one layman will say to another layman,—"My horses had distemper last year and several have not done well since, the coats are rough, can see their ribs, and can't do the work and my colts are not thrifty." The truth cannot be denied. In asking a layman what he did for the animal, he will say, "Didn't know what to do." (No. 2.) "Always had it, don't hurt them," something else the matter with 'em." (No. 3.) "If I knew what I could do for them in preventing and curing my horses expense would be no object as that will be returned many times if I can keep down the disease."

Treatment.—Consists in isolating the sick animal put in warm barn with a good heavy blanket on, the fever must be reduced with drugs, and the animal should be vaccinated with a curative

antistreptococcal distemper vaccine. The latter will cost around a dollar and the fever medicine and a good alternative tonic besides.

No strong drafts should be allowed, but should have plenty of fresh air.

The abscesses on the throat should be opened carefully and properly.

Frequently poultices of hot steaming bran applied between the jaw bones will do well to hasten the growth of the abscess.

It has ceased to be an experiment but a certainty that vaccination properly administered produces immunity for at least a year and some of longer duration lasting for several years or for the life of the patient, different animals having different idiosyncrasies as among humans.
