NOTICE OF FINAL ACCOUNT

Notice is hereby given that the undersigned, Administrators of the Partnership Estate of S. F. Ahlstrom, deceased, and Wm. Gunther, did on the 2nd day of February, 1914, file their Final Account as such Administrators in the County Court of the State of Oregon, for the County of Lake, and the Honorable B. Daly, Judge of said Court, on said date, did fix Saturday the 7th day of March, 1914, at the hour of ten o'clock in forenoon thereof, as the time, and the County Court room in the County Court house in Lakeview, Lake County, Oregon, as the place for the hearing of said Final Account, and any and all objections thereto, and for settlement thereof.

Now, all persons interested therein, and having objections to said Final Account are hereby required to present the same according to law on or before the above date and hour set forth as the time for hearing of said objections to said Final Account, and the settlement thereof.

Dated this 2nd day of February, 1914. F. M. MILLER, and Wm. GUNTHER, Administrators of the Estate of S. F. Ahlstrom, deceased, and Wm. Gunther. 15 5t.

NOTICE TO CREDITORS

In the County Court of the State of Oregon, for the County of Lake. In the matter of the Estate of Thomas C. Flynn, Deceased. To all whom it may concern: Notice is hereby given, that the undersigned has been duly appointed Administrator of the estate of Thomas C. Flynn, deceased, by order of Honorable B. Daly, Judge of the County Court of the State of Oregon, for the County of Lake, duly made and entered in said court in the above entitled matter on February 10th, 1914.

All persons having claims against said deceased or said estate, are hereby required to present the same accompanied by the proper vouchers, as required by law, within six months after the date of the first publication of this notice, to said Administrator at the Law office of L. F. Conn, in the town of Lakeview, Lake County, Oregon.

Dated and first published February 12th, 1914. JOHN C. FLYNN, Administrator of the Estate of Thomas C. Flynn, deceased.

IN THE COUNTY COURT OF THE STATE OF OREGON FOR LAKE COUNTY

In the matter of the estate of Morris Wingfield, Deceased.

Citation In the name of the State of Oregon, To Nadie Wingfield, Ruth Wingfield and Naomi Wingfield, heirs at law of Morris Wingfield, deceased, and to all known heirs of said Morris Wingfield, deceased.

By an order of the above entitled Court duly made and entered on the 4th day of February, 1914, you and each of you are hereby cited to appear in the above entitled Court in the County Court room in the County Court house in the Town of Lakeview, Lake County, Oregon, on the 14th day of March, 1914, at the hour of ten o'clock A. M., of said day, and then and there show cause, if any there be, why an order of this

LEGAL ADVERTISING

Court should not be made authorizing and directing Nadie Wingfield as administratrix of the estate of Morris Wingfield, deceased, to sell at private sale in the manner provided by law the following described real property belonging to said estate, to-wit: N 1/4 of NE 1/4, Section 16; W 1/2 of SE 1/4, SW 1/4 of NE 1/4, and Lot one, Section 19; NE 1/4 of NW 1/4, Section 16, all in Township 39 South, Range 24 East, W. M.

It is further ordered that this citation be served upon the non-resident and unknown heirs and devisees by publication in the Lake County Examiner, a newspaper of general circulation printed and published in Lake County, Oregon, for four successive weeks prior to the 14th day of March, 1914.

Witness the Hon. B. Daly, Judge of the County Court for Lake County, State of Oregon, with the seal of said Court affixed this 4th day of February, 1914. Attest: F. W. PAYNE, County Clerk.

Disregard Game Laws

At Echo in Eastern Oregon, wild fowl are so plentiful that ranchers have been advised by the Justice of the Peace that they are within their rights when they slaughter these birds, regardless of restrictions imposed by the game laws. Wild geese and ducks are so numerous that they threaten to destroy the grain crops. It is reported. Officials of the game warden's department, after making a tour through the district which is said to have been endangered by flocks of wild geese, reported that no damage had been done to the crops.

Louis Scholl, Jr., Justice of the Peace of the Echo district, who advised the farmers that they should shoot the birds, has questioned the reliability of the game warden's report. He insists that they did not cover enough territory to give them a clear idea of the havoc which the birds had wrought in "nipping" young wheat.

FOR THE FARMER

The state of Illinois has lately put up the bars against the importation of dairy cattle from nineteen different states. Tuberculosis has become so prevalent in the vicinity of Chicago that this method has been adopted for the purpose of correcting the difficulty.

Salted meat or fish is unfit as food for poultry, and this should be kept in mind constantly by novices in the business. In this connection it may be mentioned that the arsenic compounds used in sprays for orchards will kill poultry if it falls on the grass or grain that the fowls eat.

One man who thinks as he works has devised a milk stool that can be strapped to his body in the right place and is in the right place every time that he sits down to the next cow. Just what this fellow does with that extra hand that is left free as a result of this milk stool device is not stated.

In some sections the report seems to have been given circulation that eating emulge will destroy cows' teeth. There's nothing to it. Dairy cows in northern states that have eaten emulge mainly for the past eight or ten years have just as sound teeth as their mothers and grandmothers.

Chemical analysis shows that hens' eggs contain 50 per cent water, 18 per cent protein and 33 per cent fat. Duck and goose eggs contain slightly less amounts of water and a trifle more protein and fat, while turkey eggs contain 2 per cent less water, 2 per cent more protein and the same amount of fat.

The need for providing plenty of fresh air for fowls is the better appreciated when it is known that they do not perspire as do other warm blooded animals, and for this reason have to throw off impurities of the system through their lungs. And a hen is said to need seven times more fresh air in proportion to her size than a goose.

A heaping bushel of corn contains 2,748 cubic inches. To measure corn in the crib multiply the average depth of corn in the crib by the length of crib and average width (in case it has sloping sides) and this product by 1.728, the number of cubic inches in a cubic foot. The number of bushels of shelled corn will be two-thirds as much as that of corn on cob.

If the rhubarb roots are taken up, allowed to freeze for a couple of weeks (if they have not already been frozen), and buried in moist sand in the cellar to the depth of about three inches, some choice fresh pie timber may be had a few weeks hence. The soil in which the roots are buried should be kept moist, and the temperature should be not lower than 60 degrees F. to produce the most luxuriant growth.

HANDLING THE DAIRY BRED BULL

The news press has contained several notices recently relative to loss of human life by attacks of dairy bred bulls, says the Kansas Farmer. This brings up the question as to whether or not bulls of dairy breeding are more inclined to viciousness than are those of beef breeding.

It is our judgment that males of dairy breeding are much more so inclined than males of beef breeding. It must be remembered that the dairy bred male is of nervous temperament. Beef bred males are of what is known in humans as the lymphatic temperament, being symbolical of sluggishness. This difference in temperament does not necessarily imply that all dairy bred males are vicious and unsafe.

It is said of the pure bred Guernsey sire that he is able to stamp his breed characteristics on other cattle. The Guernsey is a producer of milk of high quality and of a rich yellow color. In many respects they resemble the Jersey, being noted for the high per cent of butter fat in milk produced. As a butter making cow there are few that surpass the Guernsey. Pilot of the Glen, whose photo is here reproduced, was champion bull of his breed at the Illinois state fair.

However, it does account for a much larger percentage of them being so than in the case of males of beef breeds. However, the male of dairy breeds should be carefully handled to avoid the development of viciousness. The herdsman should make a friend of the male. The male should be taught to know that the herdsman is his friend. He should be more frequently handled with a friendly stroke than with the pitchfork. The herdsman should, of course, be firm with him at all times, giving the male to understand that his herdsman is boss. It is our observation that the male cannot be ruled by fear. He can fight and he knows it and he will fight if necessary.

His horns should be removed, and while taking them off in calfhood will result in leaving a head of more shapey form and of greater beauty, we do believe that dehorning at the age of twelve to eighteen months has a good effect on him. It has a tendency to take the fight out of him and show him that there are other controlling powers besides himself. Nevertheless the male should be handled cautiously. Persons about him should at all times be on their guard. Every such animal should have a ring in his nose. If he is inclined to be unruly and has the freedom of the pasture a chain or rope dragging in the ring will have a taming effect and will often prevent injury in case he should give chase. The practice, however, of allowing the dairy bred male the freedom of the pasture and feed lot is not a wise one for reasons other than that of danger to human life.

Hog Paralysis

Paralysis in hogs, commonly but erroneously attributed to kidney worms, is induced by overfeeding and lack of exercise, and especially by stuffing growing hogs on corn, which is an incomplete feed that does not make bones. Rickets is present in most cases of swine paralysis, and this may be seen either in young pigs, fattening hogs or nursing sows. Prevent by feeding mixed rations to breeding, pregnant and nursing sows, and let them have abundant exercise at all times of the year. Feed roots and alfalfa hay as part of the rations in winter.

Pig Shelter

No matter how much nourishing feed is given to them in winter, pigs will not do well if they are not properly housed. Their house should be warm and free from drafts; also well ventilated, and their bedding dry and not too dusty. The pens where the hogs run around in the day time should be well drained. A pen which has poor drainage is a menace to the health of the hogs. This is especially true during the winter.

Rusty Farm Implements

Rusty moldboards and cultivator shovels are a nuisance, and it requires hours of hard horse and man work to clean them. A little hot paraffin brushed over them when put away keeps the iron as bright as you wish, and the minute you start all goes well.

It Pays to Groom Cows

A little grooming or brushing will have a great influence on the appearance of the cow. A few minutes spent in this way will pay large dividends in better looks and also in a greater price of farm stock and better returns.

IN THE DAIRY BARN.

Do not ask the cow to make milk and keep herself warm with the same feed. At least give her a fair chance to be protected from the storms and then let her use the feed for milk making alone.

The cow is a machine that must convert food into milk. This is one reason why she should have such a large middle, for there is the place where the food must be worked over.

Milk that is kept clean and properly cooled needs no preservative.

Comfort is essential to profitable milk production, and a cow cannot be comfortable without good bedding. Don't forget the straw.

It places the cow to be milked quickly and gets her in the habit of giving down promptly. It is often the slow milkers that make the strippers.

THE DRAFT WEANLING.

Colts Need Feed That Will Develop Bone and Muscle.

Oats, preferably crushed or ground, is the best single grain to feed a weanling colt. Here at the station cur weanlings have developed well when the grain ration was two-thirds by weight of ground oats and one-third ground corn, the hay being alfalfa. When the roughage is anything but a good quality of legume hay it is best to make the grain ration one-fourth to one-fifth bran, says Professor J. L. Edmonds of the Illinois experiment station. It is not possible to state in pounds just the amount of feed that will be required, but good, sound draft weanlings will pay handsomely if fed all the grain that they will clean up three times per day. Good quality of alfalfa and clover are the best roughages. They are growers of bone and muscle.

Weanlings ought not to be exposed to the elements at night or on the stormiest days. Access to a roomy, closed shed or run in fairs in a roomy box will be found right. The run of a good blue grass field will afford exercise and some feed. Plenty of exercise in the open with the chance to grow a good coat is as essential as feed in making a good frame. Weanlings handled in this manner may look a bit shaggy, but they will do much better than the pampered kind. It is hard to feed too much if the feeding is done regularly and the opportunity for exercise is right. Puffy joints and cocked ankles, unless the tendency is strongly inherited, come from heavy feed and not enough play in the open. Weanlings do better when by themselves than when running and feeding with older horses.

Grooming when the bedding is plentiful is not much in need under this system. The feet should be regularly looked after at least once a month. A good hoof rasp is the proper tool with which to level up the foot. Don't let the toes get too long and keep the hoof wall slightly beveled on the outside to prevent splitting. Much can be done to remedy faulty conformation of legs by skillful and regular attention to the growing colt's feet. If the stable is clean and free from mites at the setting in of winter there is likely to be no trouble from lice. Free the colts from worms at the beginning of winter rather than wait for the foals to get out of shape generally.

IMPROVING THE FLOCK.

Crossbreeding Effective in Producing General Purpose Sheep.

Considering facilities for handling—such as lay of land, feed, shelter, size of flock to run together, etc.—each of the modern breeds of sheep has its qualities, peculiarities, adaptability, and some require more feed and care than others, but all can be used for a special purpose in crossbreeding or breeding up common stock.

The Delaine Merino excels in longevity, also in weight and fineness of fleece; but the lambs are not as good sellers on the fall market as the Down breeds. Yet the Merino blood is the cornerstone of the sheep industry. The long wool sheep, such as Cotswolds and Lincolns, raise a large marketable lamb, their wool is weighty and coarse and is often discounted. A cross between these fine and coarse wool breeds makes one of the best general purpose sheep for this country we have.

These half blood sheep shear a heavy fleece of medium wool, which brings the highest market price, and the lambs are better for market under the care of the average farmer than either of their full blood ancestors.

High class sheep are as beautiful in lines of form and style as are fine horses. So, after throwing out ill shaped sheep, the basic principle in studying your flock of ewes is the weight and quality of their wool and the value of the lambs they produce. If the flock is of two or more distinct types it may be necessary to divide it and use different rams until you can cull down and develop a uniform flock, which is most desirable. If your ewes are of good form and size, but shear light fleeces, or if their wool is coarse like the Lincoln or Cotswold a Delaine ram will increase the constitution and shearing qualities of the lambs. If your flock shears well, but ewes are small, get an Oxford or a Hampshire ram. If your dark faced ewes, which you perhaps call Shropshires, are short woolled and light boned use dark faced Oxford or white faced Rambouillet rams.

A NEW CREATION WEBSTER'S NEW INTERNATIONAL DICTIONARY THE MERRIAM WEBSTER THE Only New unabridged dictionary in many years. Contains the pith and essence of an authoritative library. Covers every field of knowledge. An Encyclopedia in a single book. The Only Dictionary with the New Divided Page. 400,000 Words. 2700 Pages. 6000 Illustrations. Cost nearly half a million dollars. Let us tell you about this most remarkable single volume. Write for sample pages, full particulars, etc. Name this paper and we will send free a set of Pocket Maps G. & C. Merriam Co. Springfield, Mass.

RECOGNIZED ADVANTAGES. You will find that Chamberlain's Cough Remedy has recognized advantages over most medicines in use for coughs and colds. It does not suppress a cough but loosens and relieves it. It aids expectoration and opens the secretions, which enables the system to throw off a cold. It counteracts any tendency of a cold to result in pneumonia. It contains no opium or other narcotic, and may be given to a child as confidently as to an adult. For sale by all dealers. For Sale, White Leghorn and Plymouth Rock cockerels. Blooded fowls from Oregon Agricultural College. Fred Spangenburg. F12-1f
