

If You Would Avoid Constant Colds, Grippe, take a Good Tonic.

Mrs. V. J. Allen

Salem.—"Dr. Pierce's medicines have been used in my family and I have no hesitancy in saying that they always gave satisfactory results. My husband had the 'flu' and it appeared as though he was never going to get well. He would cough all night long, and suffered from severe headaches. He got so weak and poorly that he could not go out of the house. He was in a miserable state of health when he decided to take Dr. Pierce's Golden Medical Discovery. He could notice an improvement during the first bottle, and by the time he had taken three he was rid of the cough and pains in his head, and was well and strong. He has been a strong healthy man ever since."—Mrs. V. J. Allen, 1397 N. Commercial St.

Ask your nearest druggist for Doctor Pierce's Discovery, in tablet or liquid form; or send 10c for trial pkg. of tablets to Dr. Pierce's Clinic, in Buffalo, N. Y.

Another Mistake Exploded.

The buttercup is another of those little things, that deceive us by their name. It derived its title from the ignorant notion that, when cows ate buttercups, the butter-producing qualities of the milk were improved. The truth of this has not been proved, for the simple reason that cows don't eat buttercups.

Rock Formation.

The term "monadnock" is derived from Mount Monadnock in New Hampshire, and is applied to an isolated mountainlike remnant of hard rock extending above its surroundings in the late stages of a period of cycle of erosion. Stone mountain in Georgia is another instance of this class.

In Boston Keep Going.

Persons who visit Boston are often perplexed by its maze of streets. A visitor was complaining to a resident that he was constantly getting lost. "Never mind," said the Bostonian. "Just keep on going straight ahead and you will always come out where you want in."—Exchange.

Cheese Very Much Alive.

"An old story," said a well-known author recently, "tells us how a railway freight agent wrote to a government: 'Dear Sir—We have now held your shipment of one Camembert cheese for three days. If same is not called for immediately, it will be shot.'"

Remarkable Linguist.

Sir William Rowan Hamilton, the celebrated English mathematician, who died in 1865, had an extraordinary faculty for learning languages, and is said at the age of twelve to have mastered 13 languages, besides English.

Hating Oneself Ill.

Hate, in the course of time, creates poison in the system as well as in the mind, and all evil emotion is bad for the health. One of the earliest discovered truths was that health and morality depend on each other, and many religions are built largely upon hygiene.

Conclusive.

"My client is not mentally normal. The fact that he murdered his wife is partly a proof of that, but the fact that he married again is conclusive."—Dorffbarber, Berlin.

Two Fire Causes.

Electric light wires hung over nails and oily rags thrown into a corner are two of the things which give the newspapers stories about "fires of unknown origin."

Pioneer in Novels.

"Miss Betsy Thoughtless," by Mrs. Haywood, published in 1761, is generally regarded as the first really domestic novel in the English language. It is thought to have been the model for Miss Burney's "Evelina."

Easy.

Advertisement in Portland (Ore.) Journal—"Two married men of meek appearance for electrical sales work."—American Legion Weekly.

Great Lawyer-Presidents.

Van Buren and Benjamin Harrison are considered the greatest lawyers who have been President of the United States.

GAY PRINT SILKS ARE POPULAR; NEW COATS HAVE PATCH POCKETS

SUCH an alluring array of beautiful printed silks as the mode dictates this season! In their seductive coloring and artful patterning they fairly beckon milady to come and buy. Come and buy! That is the very thing women of smart fashion are doing, buying these pretty, joyous colored silks to their hearts' content.

Not only is the modern silk print irresistible in its loveliness, but it is positively inspirational to the designer

tailing the spring coat with pockets. If the choice of milady's spring coat were left to the small boy whose pride and love for "pockets" is proverbial, then the model in the picture wins. Win it should, for it is a very swagger new style. This handsome sports coat is made from bolts of rose colored diagonal chevrot, this fabric being a leader among novelty woollens for spring. Huge patch pockets lend a distinctive style touch. Tailored

Stylish Frock of Printed Silk.

when it comes to being styled into frock or blouse or various spring togger.

It was surely an artistic some one who conceived the idea that gay silk print looks its brilliant self the more when contrasted with a fabric of solid coloring. The thought has developed into a far-reaching vogue. Stylists find endless opportunity to exploit "ideas," now that fashion so enthusiastically applauds the combining of exotic colored prints with monotone.

The designer of the stylish frock here pictured chooses to unite a striking printed silk with an oyster white satiny fabric. With what glowing success, the picture gives proof. Highly important style items in this modish spring frock are the apron drape made of the solid colored silk and the capelet collar buttoned up

straps with huge bullet buttons find unique placement both on the sleeves and the pockets. A short strap belt is buttoned across the front, which brings up a most interesting subject, for belts vie with pockets in point of importance this season. Not particularly straight-all-around belts but belts that show a unique treatment. Not only topcoats, but suits, blouses, as well as one and two-piece dresses, emphasize the fashion for clever ideas in belts. Sometimes the belts are cut in one piece with an added underarm form, the two ends brought to the front and buckled.

Still another item of interest appears on the fashionable cloth coat, namely, the below-the-elbow puff sleeve. This idea is featured especially on straightline coats made of fine twill, for there is still a consider-

With Patch Pockets and Belt.

able interest in the unfared models. Sometimes the puff is heavily embroidered.

Fur collars of simple design finish the neckline of many a spring top coat. It is quite the proper thing to match the fur to the color of the coat. Very handsome types of twill coats have a capelet effect, such as for instance a quaker gray fine woolen, cut narrow, topped with a matching short cape and collared with squirrel.

Belted coats in fingertip lengths are meeting with favor. The belt is placed just above the hips.

Fur Choker Promised Vogue

Furriers are confidently counting on a return to favor of the fur choker as soon as the days commence to warm with spring sunshine. Consequently they are preparing neckpieces fashioned of single skins of stone marten, sable or mink.

On Their Sleeves

Smart women are wearing their courage this season on their fur cuffs instead of the collar. The effect has the charm of novelty.

New Trimming for Coats

Coats now, instead of being trimmed with mink and ermine, are trimmed with mink and ermine tails. This fur is not confined to coats, as squirrel is frequently used to fringe voiles or chiffon frocks or to decorate the small tight-fitting hats. On the latter a cluster of tails hangs over one ear.

Large Bows

Enormous bows of ribbon are being used on the hip, to decorate evening dresses with the flare line.

LIVE STOCK

GOOD SAFEGUARDS PREVENT CHOLERA

(Prepared by the United States Department of Agriculture.)

A recent investigation of the hog-cholera situation by the United States Department of Agriculture reveals surprising carelessness among farmers in dealing with the disease. The effectiveness of the preventive-serum treatment has given many swine owners a feeling of security which is not real. "Yet without proper safeguards" declares Dr. U. G. Houck, in charge of hog-cholera control, "the disease is just as dangerous today as it ever was."

For safety against this disease it is necessary to observe certain precautions. Isolate all new stock, keeping it apart from other hogs for a period of at least two weeks. This precaution applies especially to hogs purchased at public sales or other sources likely to spread infection. Permit no sick hogs to roam at large. Keep hog lots properly fenced and maintain the fences in good repair. Burn or bury deeply the carcasses of animals that die on the farm. Dead animals lying above ground attract dogs. Many outbreaks have been traced to portions of diseased carcasses carried from place to place by dogs. Do not attempt to hide the existence of the disease, since every hidden center of infection is a menace to surrounding farms.

The preventive-serum treatment is a dependable insurance against hog cholera, but this treatment, it should be remembered, is a preventive and not a cure. By adopting the foregoing safeguards swine owners may largely reduce the loss from hog cholera which last year exceeded \$20,000,000.

Splendid Time to Grow

Live Stock, Says Dean

Denn W. C. Coffey of the University of Minnesota, department of agriculture, believes this is a good time for energetic and intelligent young men to get on good land and farm with live stock as a major enterprise. Speaking before the Block and Bridle club, an organization of agricultural college students especially interested in animal husbandry, Dean Coffey said:

"Good land within comfortable distances from market can be purchased at more reasonable prices now than in several years past. If the capable college graduate can arrange for adequate financing, he will be better off in the course of 10 to 15 years if he goes on good land than will the graduate who chooses a professional line of work."

Sharp distinction was made by the dean between good and poor land. Land of low producing power, said he, constitutes a handicap. The young men were told that to be successful in live-stock farming they should prepare themselves to comprehend the whole process of farming from the handling of the soil to the turning of the finished product over to marketing agencies for disposal.

Sheep Eradicate Weeds

and Improve Fertility

Most weeds seem to be ice cream and cake for sheep. In a list of 200 weeds, sheep will eat 175 of them, including cockle, the young shoots of Canada thistle, dandelion, pigweed, foxtail, ironweed, horseweed, whitetop, ragweed, wild mustard, winter cress, wild morning glory, sow thistle and many other species that represent the worst pests. And the more weeds sheep eat the less is the cost of their upkeep. Fields, fence corners, roadsides and farm waste places generally can be kept tidy with sheep, all the while improving the fertility of the soil and yielding a comfortable profit. Pastures can be kept clean by the use of sheep, while the cattle carrying capacity can be increased in the meantime.

Sheep are also useful in grain-fields and in meadows. In a timothy meadow there is no better way to kill whitetop than to turn sheep into the field, since sheep prefer the white top to timothy. On grain stubble, sheep will pasture on foxtail and other late blooming weeds.

Live Stock Hints

If your cattle are infested with lice, get a brush and groom them with raw linseed oil, that is, paint them with it and see that they are thoroughly covered.

Young pigs must have exercise. Without it they are very apt to die of thumps—which takes its name from a jerkiness of the muscles accompanied by hiccoughs.

The prosperous farmers since the war have been hog producers, for a hog crop shows a quick turnover.

Hand-fed pigs are more likely to be overfed than underfed when it is understood that a sow has only about one quart of milk per day for a whole litter of pigs.

Disposition is an important factor in determining the number of pigs which a sow succeeds in raising. It should be mild and quiet rather than nervous, mean or cross.

Corn does not contain enough of the muscle and bone-building materials to produce good strong pigs.

Hogs weighing over 250 pounds will be strongly discriminated against by the packers during the next few months.

When sows are fed on corn alone regardless of whether they are in good condition or not, weak litters of pigs may be expected, consequently a small per cent of the pigs which are fattened will be saved.

Daily Fashion Hint

SURPLICE CLOSING FEATURED

Smartness and severity are synonymous terms in the lexicon of fashion, and both are eloquently interpreted in this model in natural color kasha cloth trimmed with novelty braid whose color scheme combines black, red, and old blue. The blouse closes in surplice fashion, being worn with a skirt that is plaited in front and plain in back. Medium size requires 3 1/2 yards 40-inch material and 2 1/2 yards novelty braid.

Pictorial Review Printed Pattern No. 3018. Sizes, 34 to 44 inches bust, 45 cents.
