Larkin Reynolds is a young man and a new comer who has faith in the hill lands about Jacksonville being especially adapted to growing a fine quality of fruit and especially of peaches, cherries and pears. To back up his faith he bought last year four acres of land on Jackson creek three-fourths of a mile west of Jacksonville, and put up a dwelling house. During the summer months he worked the greater part of the time in a nearby sawmill, but this winter he has put in on his own place and now has the whole four acres cleared and the most of it planted to peaches and cherries. That his place within five years will be yielding him a handsome revenue is a certainty for he has a fine location and deep soil and that valley has a reputation for growing peaches and cherries not excelled by any other section of the Pacific Coast.

Postmaster John F. Miller has received a telegram from Senator Mitchell stating that the senate had confirmed his appointment, made by the president, as postmaster for Jacksonville. The change in Mr. Miller's commission from a fourth-class to a presidential appointment was made on January 11, and as the term of a presidential appointment is for four years, this with the seven years that Mr. Miller has already served will make eleven years for him. Mr. Miller is credited by the postal inspectors of keeping his records in perfect order and of having one of the best kept and handiest post offices in Oregon. No person dealing with the public can please everyone, but Mr. Miller has come as near giving satisfaction to the patrons of his office as a postmaster ever attains.

The electric light system at the Sturgis mine, put in by by Electrician E. L. Gurnea of Medford was started up Saturday and works without a hitch and gives full satisfaction. It is both an arc and incandescent system, the arc lights being used in the mine and the incandescents in the store, mess house, barn and dwellings. Water power is used to operate the dynamo. Now that lights are had, piping is carried on day and night with two No. 3 giants. The big derrick recently put in and which is operated by a large donkey engine adds much to the working capacity of the mining plant for it lands the boulders over the dump as fast as they are thrown out by the giants. Now that the enlarged plant is in running order Manager W. L. Olmstead will keep the giants roaring 24 hours in each day until the dry season next summer shuts off the supply of water. They are now piping on an ancient channel that is turning out gold at a rate that will insure a big clean-up.
