reduced more and some less than the above stated figures.

If there is a six-inch water main laid on Klamath avenue from Conger street to Eleventh street and connected at equal intervals to the main on Main street, by at least four six-inch pipes and one four-inch double hydrant placed to each block on said street within the limits bounded by Conger and Eighth streets, a general reduction of 20 per cent from the present rates of insurance will be given.

If in addition to the six-inch main and hydrants on Klamath avenue the hydrants on Main street are placed 150 feet apart and alternate on each side of the street, a further reduction of 3 per cent will be given.

Should it be decided that the above-mentioned improvements in the water system will be made, will you kindly advise us at what date you can expect them to be completed, and we will then withhold publishing the new rates until the maximum reduction can be given, since we can apply the maximum reduction to the results of our recent survey.
