Capital and Labor Must Be Kept Busy In the right channels to keep the nation prosperous. National prosperity is the collective result of local prosperity and "confidence" is the mysterious thing back of both. Confidence is necessary in all walks of life to bring success, for without it there can be no future. Our own town needs the confidence of her people. A town is known by its works just as a man is known by his deeds. There's no better way to show your confidence in the town than to be known as a home owner and no quicker way to gain your share of the independence for which our Revolutionary fathers fought than to own a home. Better start today—come in and talk it over with us—we can give you a good idea of the total cost as well as the kind of timber you'll need.

FEED HOGS WITH TANKAGE IS EXPERIMENT NNW ON

New Deal Being Tried by Agricultural Experts at State Farm College, and It Is Worked Along the Most Systematic Lines Special to The Herald CORVALLIS, Jan. 5.—Because it has been proven that wheat alone does not produce the best gains in pig fattening, it is suggested by the Oregon Experiment League that the wheat farmers in Eastern Oregon try supplementing it with digester tankage.

Digester tankage is the refuse of the packing houses thoroughly cooked, dried and ground. It comes in sacks and will keep indefinitely. It may be obtained from a North Portland meat company for about \$17 a ton, and with freight added will cost about \$55 a ton in most parts of Eastern Oregon. If bought in smaller quantities the cost would be slightly greater. Thrifty shoats of fairly uniform size and quality, weighing between 60 and 100 pounds, would be suitable animals with which to try the experiment. They should be divided into two lots as nearly uniform as possible, and each lot should be carefully weighed at the opening of the experiment. It is best to weigh for three successive days, and take the average as the correct weight for the second day.

The first lot should be given three pounds of ground wheat a day, divided into two feeds, gradually increased in amounts until the animals are getting all the grain they will clean up at each feed. They should come up to the trough hungry and stay there until all the feed is cleaned up. The second lot should get a mixture of one part tankage to nine parts wheat, fed at the same time and in the same way as the other pigs.

At the end of about sixty days the animals should be weighed, and the average gain per day for each should be estimated, as well as the total amount of feed consumed by each, and the food consumed to produce each pound of gain. The difference in the appetite and the thrift of the individual pigs should be noted, and the lot in the best market condition. It is unnecessary to weigh the feed every day, as a few sacks for each lot may be weighed and each group of pigs be fed out of its own racks. If scales are lacking the amount of feed may be compared fairly well by the number of sacks consumed if the sacks are uniformly full. Stock scales are needed to weigh the pigs, but a small number can be weighed on common platform scales. This is one of four experiments prepared by Prof. E. L. Pette of the Oregon Agricultural college for the members of the experiment league. Many others dealing with different branches of scientific agriculture are being carried on by members of the league. Those interested in obtaining membership may write either the secretary, Mr. G. Stanton Griffiths, Medford, or President Leonard Carpenter, O. A. C., Corvallis.

SOME FACTS CONCERNING YOUR WATCH The balance wheel in modern watches makes one revolution each time the watch ticks. The watch ticks five times each second, 300 times in one minute, 18,000 times in one hour, 432,000 times in one day and 157,680,000 times in one year. A variation of 1-1,000 part in the vibration of the hair spring which controls the balance wheel will make a difference of fifteen minutes in one day. If the watch owner will think a moment he will see that it is necessary to give the watch fairly good treatment in order to get good time out of it. A Speck of Dust, rancid oil, cracked jewels, loose screws and many other things will spoil the delicate adjustment. As an expert of many years experience in watch repairing I solicit your patronage, and guarantee all my work to give satisfaction. FRANK M. UPP, Watchmaker, Jeweler and Engraver, White Building.

Notice of Restoration of Public Lands to Settlement and Entry Department of the Interior, General Land Office, Washington, D. C., October 27, 1911.
