

French Air-Men to Try Long Non-Stop Flight

PARIS, April 8.—Several aeroplane constructors are building machines to fly twenty-four hours without stopping. Maurice Farman, the biplane constructor, is continuing his night flying practice. As a dozen or more aviators are seeking the honor of being the first to make a twenty-four hour non-stop flight, a veritable race is expected to ensue the first night of flight, from 1,000 to 1,700 candle

To Mark Site Where Washington Was Victor

United Press Service

TRENTON, April 8.—Twelve obelisks of granite will mark the route of Washington's movement around the British left at Trenton and thence to Princeton, one of the Revolution's most important strategies.

The Sons of the Revolution have let contracts for the erection of the markers which will be eight feet tall and set with the bronze legend: "The Route of Washington's march by night from Trenton to Princeton and victory, January 3, 1777. Erected 1914."

It is history that Lord Cornwallis retired on this memorable night and

said "we'll catch the old fox in the morning."

However, in the morning Washington was at the rear of Cornwallis, ready to meet the British reinforcements coming from New Brunswick. This force was thrown into confusion and fled. Washington's little force was too exhausted to pursue the advantage and it retired to Morristown and went into winter quarters.

The obelisks will be placed in position late in April or in early May. Some of them will stand in open fields while others will stand on the side of roads still in use. Eventually the Sons of the Revolution will put up obelisks all the way to Morristown.

Climbing Blackfoot Glacier, a National Wonder of Glacial Park

Hundreds of American tourists will go this summer to Glacial Park in Montana for a view of Blackfoot Glacier, a wonder of the North American continent. This enormous mountain of ice has a surface of twenty-four square miles, and in some places it slants at 45 degrees.

Many climbers must tie themselves together in Alpine fashion to keep from slipping.

The glaciers forms between Blackfoot and Citadel mountains, and runs down to Gunsight Lake. It moves two or three inches a year, according

to scientists who have investigated. At times rumbling like thunder is heard, and the sound seems to come through the crust. It is caused by the cracking of the ice as it slips along the surface of the mountain. In the distance at the right of the photograph is shown Mount Jackson.

Canned Eggs Next Commodity New Method to Fight Cold Storage Trust

During the Time Eggs Are Cheap They Will Be Broken Into Cans, Frozen and Sold When Needed

United Press Service

WASHINGTON, April 8.—"One can of condensed milk, a can of asparagus tips, a can of beans, a can of beef and a CAN OF EGGS."

When the American grocer answers his telephone a few years hence he will probably get such an order, for the Department of Agriculture is doing much to encourage the canning of eggs and claims that there are more logical reasons for canned eggs than for almost any other food product now sold in tins.

For one thing canned eggs will be cheaper than eggs in the shell for they will have been put up in the great egg producing farm corn belt at the time when hens are laying and fresh eggs are almost a drug on the market. The cans can be shipped in refrigerator cars closely packed and there will be no waste space for cardboard packing, while the present 10 per cent loss for breakage will be saved.

Before the Department endorsed the canning of eggs its specialists made a long and thorough bacteriological study of eggs to determine what changes they underwent and what factors made them spoil. This spotting was found to be due almost entirely to growing bacteria in the egg—a little warmth and a little air, and the damage was done. With other products the secret was found to be absolute cleanliness and heat. With eggs it is the same cleanliness combined with good grading and cold.

Canned eggs have been tested after having been kept in storage a year and their quality and flavor found unimpaired. As one investigator put it, the chief difference was that you opened them with a can opener instead of a spoon. They come to the consumer frozen and when melted they look and smell like fresh eggs broken into a bowl and stirred until the whites and yolks are mixed, except that they are a little thicker. Similar experiments have been made with dried eggs or egg powder, and this, too, will keep for months provided it is kept at a low temperature. It is hardly possible, therefore, that canned or dried eggs will ever be displaced on store shelves.

An egg canning plant, which the

Department regards as a standard, looks more like the modern operating room of a hospital than a commercial institution. The eggs on their arrival at the plant are sent to a chilled room and kept there for 24 hours at the temperature of a few degrees above freezing. Then they are candied and all suspicious ones are discarded.

The graded eggs then go to the refrigerated room that is as aseptic and as well lighted as it is possible to make it. No dust or flies can get in and the temperature never rises above 65 degrees. It is water tight and steam proof so that it can be washed and steamed throughout. The utensils for breaking the eggs are all of metal so they can be sterilized in live steam. Before beginning work the operatives sterilize their hands as much as the surgeon does before beginning an operation. The similarity also extends to the donning of clean white caps and gowns.

Each egg is broken into a separate cup and inspected before being put into the sterilized cans. Every doubtful egg is discarded, the cup again sterilized and the operative's hands washed before touching another egg. In order to make certain that each egg gets sufficient attention the egg breakers are not allowed to exceed a definite number of eggs per hour.

The canning of eggs is of immense benefit to the farmer because it provides him with a steady market at a time when warm weather makes it imperative that he dispose of his product in a hurry. It is also a market for small eggs, dark shelled eggs and other varieties that do not sell well in the shell.

Kansas farmers have just discovered a market for one of the most obnoxious of the native weeds, and all that now remains to make the state the greatest in the Union is for some scientist to discover a way to get oil from grasshoppers.

For decades the soap weed, or Spanish bayonet, has been the bugbear of the western Kansan, but he is now bailing it and selling it to soap manufacturers at \$8 a ton, says a bulletin recently issued by the forest service. For unnumbered years the

Mexican and Indian women used a concoction of the weed to wash their hair, but it took the white man a long time to learn its value.

It has become a pest in many of the national forests as its growth has a deleterious effect on all other vegetation. It has also been roundly condemned by stockmen as it often killed cattle indiscreet enough to eat it. Its newly discovered commercial value, however, promises not only to clear it from the open prairies, but its cultivation is not an improbability.

"13" Still on the Job
Wilson-McAdoo engagement was officially announced on Friday, the 13th.

Bridegroom-elect, following out an old superstition, sat on the dias used by the thirteenth White House bride, and that meant he soon would wed.

Eleanor Wilson, her father and her bridegroom-elect each have thirteen letters in their names.

Eleanor Wilson will be the thirteenth White House bride, strictly speaking. That is, the thirteenth bride direct from a president's family, one of the marriages in the White House being a soldier and his sweetheart.

Thirteen is the Wilson family's lucky number.

The influence of Germany in dominating the affairs of the new kingdom of Albania has not only been revealed in the fact that when the Albanian delegation offered the throne to the Prince of Wied the latter wore his Prussian uniform and spoke only German to the delegates, but that the national flag is the invention of a German professor, Emil Doepler.

In Massachusetts a man may marry his deceased wife's sister, but is prohibited from marrying her grandmother.

"Dr. Thomas' Ecolite Oil is the best remedy for that often fatal disease—croup. It has been used with success in our family for eight years."

IF BACKACHY OR KIDNEYS BOTHER

EAT LESS MEAT AND TAKE A GLASS OF SALTS TO FLUSH OUT KIDNEYS—DRINK PLENTY WATER

Uric acid in meat excites the kidneys, they become overworked; get sluggish, ache, and feel like lumps of lead. The urine becomes cloudy; the bladder is irritated, and you may be obliged to seek relief two or three times during the night. When the kidneys clog you must help them flush out the body's urinous waste or you'll be a real sick person shortly. At first you feel a dull misery in the kidney region, you suffer from backache, sick headache, dizziness, stomach gets sour, tongue coated and you feel rheumatic twinges when the weather is bad.

Eat less meat, drink lots of water; also get from any pharmacist four ounces of Jad Salts; take a tablespoonful in a glass of water before breakfast for a few days, and your kidneys will then act fine. This famous salt is made from the acid of grapes and lemon juice, combined with lithia, and has been used for generations to clean clogged kidneys and stimulate them to normal activity, also to neutralize the acids in urine, so it no longer is a source of irritation, thus ending bladder weakness.

Jad Salts is inexpensive, cannot injure; makes a delightful effervescent lithia water drink which everyone should take now and then to keep the kidneys clean and active. Druggists here say they sell lots of Jad Salts to folks who believe in overcoming kidney trouble while it is only trouble.

Notice of the Filing of the Report of Viewers on Second Street Boulevard.

Notice is hereby given that the viewers heretofore appointed by the Common Council of the City of Klamath Falls, to view the proposed extension of Second Street from its intersection with Plum Street southeasterly to the southerly city limits, and to determine how much less valuable the lands or other property or part thereof through or over which the proposed boulevard is to be opened, laid out and established; and to ascertain the respective interests of persons claiming to be the owners of the lands or other property; and to estimate the damage which each of the respective owners thereof will sustain; and to make a just and equitable estimate and assessment of the value of the benefits and advantages of such proposed boulevard to the respective owners whose property will be occupied by such boulevard and lying within 100 feet of the north-easterly line of said boulevard:

(The boundaries of said boulevard are as follows, to-wit: For the easterly line of said boulevard, commencing at the southwesterly corner of block ninety, in Klamath addition to the City of Klamath Falls, run thence south 64 deg. 10 min. east 690 feet; thence south 41 deg. 54 min. east 1,035 feet; thence south 31 deg. 34 min. east 675 feet; thence south 8 deg. 27 min. east 708 feet to city limits, the westerly line of said boulevard being distant westerly from said line and at right angles therefrom 80 feet.)

has been filed with the Police Judge of said city, and said report will be considered by the Common Council on the 27th day of April, 1914, at its regular meeting. And all persons interested are hereby notified to present in writing their objections to said report, if any they have, on or before said date, and said objections, if any there be, to said report, together with said report, will be heard and determined by the council on said date.

A. L. LEAVITT,
Police Judge of the City of Klamath Falls.
Dated at Klamath Falls, Oregon, April 3, 1914. 3-21

Notice for Publication
(Not Coal Lands)
Department of the Interior, United States Land Office at Lakewood, Oregon, March 5th, 1914.

Notice is hereby given that James D. Grimes, whose postoffice address is Klamath Falls, Oregon, did, on the 21st day of March, 1913, file in this office Sworn Statement and Application, No. 96489, to purchase the SW 1/4 NW 1/4, W 1/2 SW 1/4, Sec. 11, and NE 1/4 SE 1/4, Sec. 10, township 39 N., range 10 E., Willamette Meridian, and the timber thereon, under the provisions of the act of June 3, 1878, and acts amendatory, known as the "Timber and Stone Law," at such value as might be fixed by appraisal, and that, pursuant to such application, the land and timber thereon have been appraised at a total of \$400, the timber estimated at \$10,000 board feet at \$1 per M., 400 juniper posts at 5 cents each, and the land at \$170; that said applicant will offer final proof in support of his application and sworn statement on the 28th day of May, 1914, before C. R. DeLoe, county clerk of Klamath county, Oregon, at Klamath Falls, Oregon.

Any person is at liberty to protest this purchase before entry, or initiate a contest at any time before the patent issues, by filing a corroborated affidavit in this office, alleging facts which would defeat the entry.

JAS. F. BURGESS, Register.
