

Sterilization Is Fought by the Iowa Courts

United Press Service

KEOKUK, Iowa, April 14.—Federal Judges Smith, McPherson and Pollock are today hearing the attack upon Iowa's new law calling for the sterilization of insane and habitual criminals by the state board of parole. The attack is being made by thirty convicts in the state penitentiary at Fort Madison. They have banded together and employed a lawyer.

The state parole board has already put the law into force in the three insane asylums, where fifty operations have been performed. The board issued an order for operations at Fort Madison, but it agreed with the attorney for the convicts to withhold action until the law can be tested in court. The convicts claim that the law is in violation of their rights guaranteed by the federal constitution.

Poor Little Jewess Inherits a Fortune

Marion Silovitch, a 17-year-old Jewess, who had worked in a little jewelry store in Brooklyn as a clerk for several months, with no other ambition than to take her few dollars home to her mother every Saturday night, returned to her home the other day with a letter from the executor of her uncle's estate in Odessa, Russia, an uncle from whom none of the family had heard in many years.

"Your uncle has left you 200,000 rubles," it read. That meant nearly \$100,000. The uncle was a wealthy wheat commission merchant in Odessa. His poorer brother had emigrated to the United States many years before. He had not prospered, and he seldom heard from the merchant. But the uncle has always been partial to his niece.

"What are you going to do with the money?" a reporter asked the girl. "Make mother and father happy for the rest of their days," was her answer.

Sewage Irrigation Is Used in New Jersey

United Press Service

WASHINGTON, D. C., April 14.—A profitable means of disposing of sewage from institutions and small communities in districts where no general system of sewage disposal is available is disclosed by a report of experiments carried on by the department of agriculture at the New Jersey training school, located at Vineland. In the past the sewage from this institution, which has a summer population of about 600 individuals, has been a nuisance, ruining considerable land and creating a breeding place for mosquitoes unless kept well covered with oil. In 1913 this sewage was spread over about twice as much ground as formerly, and this land, instead of being injured, was made to produce heavy crops of alfalfa and

silage corn, thus doing away with the nuisance and securing a valuable crop at the same time. It was possible to run this sewage over a part of an alfalfa field planted previously, and compare the yields from the irrigated and unirrigated tracts. The part of the field on which the sewage was run yielded at the rate of five tons per acre for the season, while the part of the field receiving no sewage yielded at the rate of but three tons per acre. The yields of corn were not determined, but the yield on the land on which the sewage water was run was so much larger than that on the land not watered that the directors of the school are putting in the equipment necessary to spread the sewage over still larger areas in 1914.
