### GASOLINE USERS

# ATTENTION!

GASO-TONIC is just what its name implies, it is a TONIC for gasoline.

It is used in automobiles, tractors, motorcycles, motor boats and all gasoline, kerosene or distillate engines.

Ten cents worth of GASO-TONIC will treat ten gallons of gasoline, which on account of the increased mileage is almost the same as selling gasoline at 8 cents per gallon. The automobile owner can hardly believe this. It is true, just the same.

Let us figure this out for you. If an automobile owner can run his car one hundred miles on ten gallons of gasoline, he can go one hundred and forty miles on ten gallons of gasoline that has been treated with GASO-TONIC. Thus gaining forty miles, the equivalent of four gallons of gasoline, which has cost him ten cents, or less than 8 cents per gallon.

But there is something still more important. GASO-TONIC not only increases power and mileage from 25 per cent to 40 per cent; it softens and dissolves carbon, thereby eliminating all carbon deposits, which cause 75 per cent of all engine troubles. It keeps the motor clean; it puts new life and "pop" and snap into the motor.

Its success throughout the United States has caused a host of imitations to arise, who are playing on the good name and superior merits of GASO-TONIC. We are exclusive agents for Klamath County for GASO-TONIC.

A quart can of GASO-TONIC costs you \$2.00.

We guarantee that GASO-TONIC contains neither acid or other ingredients that can injure, in any way, the motor, the carburetor or any of its connections, and that it will prolong the life of the motor by keeping it free from carbon.

### TODAY'S ODDDEST STORY

United Press Service  
NEW YORK, March 21.—The origin of that seemingly senseless, though in reality highly significant phrase: "Get Your Goat," is allegedly explained by Dr. J. Allen Gilbert of the Medical Record staff. He said today that the phrase originated among racetrack touts "who know that a high-bred racehorse always does better work on the track when he has an old goat friend for a pal in the paddock; and racehorses' goats sometimes are stolen by owners or friends of horses competing in the next day's races." Now wouldn't that get your goat?

# Experts Forecast the Greatest Slaughter of World This Spring

By WILBUS S. FORREST  
(United Press Staff Correspondent)

LONDON, March 18.—(By mail)—Men who have been in closest touch with every move of the world war to date are beginning to forecast that the next five months will bring an unparalleled burst of battle, attended by the worst bloodshed in the world's history.

The immense waste of human life and materials before Verdun, greater than that which shocked the world at Liege and Namur, has demonstrated, the experts say, that if this war goes on to the bitter end, no phase of history, ancient, medieval or modern, will compare with the slaughter. One military critic said:

"The almost impregnable character of the defenses on the western front, which have been building for eighteen months, make it suicide for the first line of any assaulting body of troops. When a commander orders a battalion to the assault and posts the reserves in the rear ready to follow, he knows that the position attacked will be captured by the reserves, if captured at all.

"He cannot help but know in advance that the first line will melt

away before the fire of the opposing side. Before the reserves reach their objective point over the bodies of their comrades, they, too, may have been decimated by the machine gun, rifle and cannon fire which protects the trenches on every mile of the front that runs from the North Sea to Switzerland.

"No one can blame the commanders for the course they are compelled to take. It is war. The men, too, are not unwilling to make the sacrifice. Those in the front ranks know that their chance is slim. The best they can ask for is a wound from which they will ultimately recover. Months of monotonous trench warfare are responsible for this. The men are willing and ready for anything that means a diversion from the stalemate of the past year and a half.

"What will happen on the eastern front will be repeated on the western, where both the Russians and Germans have been working feverishly for months entrenching, fortifying, constructing wire entanglements and placing heavy ordnance pieces sufficient to sweep the ground for miles around."

At Salonika, where the allies hurriedly dug themselves in, and have gradually fortified their holdings to almost impregnability, the cost of taking the Greek port for the central powers would far exceed its military worth.

Throughout all the theaters, the coming spring will see the greatest activity of the war, attended by the slaughter which conditions make in-

evitable, the military experts are saying.

Nor will the slaughter be limited to soldiers, some forecasts declare. It is believed in some circles that Zeppelins will take heavy toll of civilian populations in many quarters. Reports from Friedrichshafen, on Lake Constance, say that the Zeppelin factory there is turning out twelve or sixteen Zeppelins a month. The German Parseval and Schults-Lange factories, located elsewhere, also are reported active to an extent of ten times their normal output.

This great monthly addition to the German aerial fleet, the experts are inclined to think, must forecast hitherto unexampled air raiding everywhere. The question of the air defense of London is being debated in Parliament, and with the appointment of Lord Derby as air minister, the public is beginning to have confidence in the ability of the aerial defenders to deal with the Zeppelin menace. Steps in the right direction have been taken in many places.

The renewed activity of the German submarines, it is admitted here, means a toll of non-combatants probably exceeding previous losses, but there is genuine confidence that the navy will meet that problem, too.

The greatest man-killing, however, will be confined to the various armies in the field.

SEE VEGETE—HE HAS IT

# WOMEN SHOULD GET THIS HABIT AS WELL AS MEN

Don't eat a bite of breakfast until you drink a glass of hot water, says authority.

Wash the poison and stagnant matter from system each morning, and feel fresh as a daisy.

Sanitary science has of late made rapid strides with results that are of untold blessing to humanity. The latest application of its untiring research is the recommendation that it is as necessary to attend to internal sanitation of the drainage system of the human body as it is to the drains of the house.

Those of us who are accustomed to feel dull and heavy when we arise, splitting headache, stuffy from a cold, foul tongue, nasty breath, acid stomach, can instead, feel as fresh as a daisy by opening the sluices of the system each morning and flushing out the whole of the internal poisonous stagnant matter.

Everyone, whether ailing, sick or well, should, each morning before breakfast, drink a glass of real hot water with a teaspoonful of limestone phosphate in it to wash from the stomach, liver and bowels the previous day's indigestible waste, sour bile and poisonous toxins; thus cleansing, sweetening and purifying the entire alimentary canal before putting more food into the stomach. The action of hot water and limestone phosphate on an empty stomach is wonderfully invigorating. It cleans out all the sour fermentations, gases, waste and acidity and gives one a splendid appetite for breakfast.

While you are enjoying your breakfast the phosphated hot water is quietly extracting a large volume of water from the blood and getting ready for a thorough flushing of all the inside organs.

The millions of people who are bothered with constipation, bilious spells, stomach trouble, rheumatic stiffness; others who have sallow skins, blood disorders and sickly complexions are urged to get a quarter pound of limestone phosphate from the drug store. This will cost very little, but is sufficient to make anyone a pronounced crank on the subject of internal sanitation.

(To be Continued)
