**Why Beefsteak Is High**

This chart was copied from Bulletin No. 226, U. S. Bureau of labor Statistics. It is the latest that has been issued. 100—1916 price.

Remember when beefsteak was 20c a pound?

Now it's 40 and 50 cents a pound.

Why?

This chart shows that the price packers have had to pay for cattle has gone up with the price received for beef.

In fact, it shows that the "spread" between cattle and beef prices has been gradually reduced during the past 30 years—owing to competition among packers, their increased efficiency, bigger volume, and elimination of waste.

The packer's profit of only a fraction of a cent per pound of meat has helped to narrow this "spread."

Increased farm-production costs have made higher cattle prices necessary.
