HENRY ALBERS IS NOT CONNECTED WITH THE ALBERS MILLING CO.

An account of the name of the Albers Bros. Milling Company, a corporation having been mentioned in connection with that of Henry Albers during newspaper reports of his recent trial, the stockholders of whom there are ninety-five, feel that it is necessary to make the following statement to avoid being involved in his case:

"Albers Bros' Milling Company was

not on trial or in any way implicated in his case, which was strictly individual. This was repeatedly brought out during court proceedings, as court records will prove.

Henry Albers is in no way connected with Albers Bros' Milling Com-

pany, either as owner of stock or in any manner whatever. He was at one time an officer and stockholder, but even then held only ten per cent of the stock. He was compelled to resign in October of last year.

"These facts are a matter of record

and should hereafter set at rest any doubt from that source as to the patriotism and integrity of the corporation." 18-20-21

WATER

Just a few years ago the City of Klamath Falls was "Up against it." Perhaps there wasn't one person in five hundred knew it, but, nevertheless, it was a fact.

The situation was critical, the future of the City hung in the balance. Few realized, busy in their everyday affairs, that the Queen City of Southern Oregon, standing as she does on the banks of a great river and touching with her boundaries two great lakes, was famished for water.

There was "Water, water everywhere, but not a drop to drink;" it was starvation in a land of plenty, for the water of these big lakes and in the river was tulle soaked and germ contained.

The only available supply was being pumped from an open spring into distributing reservoirs, but the quality was questioned and the supply inadequate.

Something had to be done; something was done! And today the City of Klamath Falls is possessed of an abundant supply of the purest artesian water in the world.

Three 12-inch wells were drilled through hard rock, one to a depth of 78 feet, one to 80 feet and one to 160 feet, from which pure, cold, clear water gushed. These wells were cased, capped and sealed, and it is from these rock covered strata that the water used in the City today is being pumped—water free from contamination of any kind, for it does not see the light of day until it pours into the reservoir, and then only until it again runs away into the mains to serve you at the faucet.
