Traveler Asserts Product of Northern France Has Any Like Edible Beaten a Block.

If perchance we had fared into one of the northeastern provinces of France we were reasonably certain the ment would be rounded out with helpings of a certain hind of cheese that is indigenous to these parts. It comes in a flat cutie, which invariably is all caved in any squashed out, as though the owner had sat upon it while bringing it into the market in his twowheeled cart.

Likewise, when its temperature goes up It becomes more of a liquid than a solid; and it has an aroma by virtue of which it secures the attention and commands the respect of the most ensual passerby. It is more than just cheese. I should call it mother of cheese. It is to other and lesser cheeses as civel cats are to canary birds-if you get what I mean; and in its company the most boisterous Brie or the most vociferous Camembert you ever saw becomes at once deaf and dumb.

among strangers eating it-or, when right into the same house with themselves,-Irvin S. Cobb, in Saturday Evening Post.

MAN MERELY POOR SECOND

Swiftly as Aviators Travel Through the Air, the Swallow Easily Outflies Them.

Doubtless the swiftest passage over a long distance ever made by man was from Newfoundland to Ireland. They Frederick H. Neilson. traversed a space of 1,932 miles in 972 minutes. That was at the rate of nearly two miles a minute. To be precise, it was a mile in 20.18 seconds. For a much less distance a slightly higher speed was made by an army airplant between Bosten and New York. The distance of 175 miles was made in \$3 minutes. That was a mile In 28.15 seconds, or more than 185 feet a second.

That is rapid traveling. It is not, however the swiftlest nertal flight known. A swallow could literally fly round and round one of those mirplanes when the latter was at tep speed. Carefully conducted tests by a French scientist have demonstrated that the speed of a swallow in full flight sometimes goes as high as 200 feet a second, or at the rate of a table in 18 seconds, while the ordinary flight of a swallow is 210 feet a second or considerably faster than the sirplane.

Platinum Wonderful Metal.

The American Museum of Natural. History has issued a bulletin giving 1002. many interesting facts relating to platinum, one of the most striking of which relates to its ductility. The marvelous ductility of platfour may be conceived when we consider that out of a single troy ounce of the metal it would be possible to make an almost infinitely slender wire that would reach from Santiago, Chile, across the continent to Rio Janeiro, a distance of fnum into so exceedingly fine a wire it is covered with a thin layer of gold. This wire is drawn to the thinness of the former one, and the gold is dissolved. A small section of this second wire is then given a conting of gold, redrawn and the gold covering dissolved. After this process has been repeated several times the wire finally is still intact, but virtually invisible.

England's "Mad Poet."

The name "Mad Poet" was applied to Nathaniel Lee, an English dramntist who was born in Harfield in 1662. He was the son of a Presbyterian minister of Hertfordblire who conformed to the Reformation. He was educated at Westminster school and Trinity college, Cambridge. For n time he was on the stage, but later devoted himself to writing tragedies, of which he presided about a dozen. His first success of play was the "Hisval Queens" (1001), known afterwards as "Alexander the Great," in which secars the famous lines "When Greek joined Greek then was the tug of war." He collaborated with Depter of The Duke of Guise," (1982). Lee because fusure in 1084, and was commed in the asylute for five years, hence he was styled "The Most Pace." He div. • In a fit of intersection at London in stand the sever it is placed on a flat

Swift-Moving Creatures,

swiftest method of practiced by man. But even that is slow when compared with the speed of some oth t creatures. It surpasses the hare and the sleer, and far outdistances the comparatively slow hangaroo. But there is a jumping mouse about 1,800 miles. To draw out plat- in the African deserts which is credfbly said to make eighty leaps a second, of 10 feet each. That means 800 feet a second, which is more than four times the speed of the airplane and three times that of a swallow, Nor is even this amazing creature the swiftest known, for the common flea has in his leaping a velocity of 850 feet a second, which approximates ten miles
