BAMBOO GROWS WELL IN SOUTH

NEW ORLEANS, Aug. 2.—Eight years ago Edward A. Mcllhenny of Avery island was commissioned by the United States bureau of plant production to experiment in the growing of Chinese and Japanese bamboo so as to determine the best varieties that may be grown in the south. He is now about to make his report to the government regarding his forests. The bamboo, Mr. Mcllhenny says, sometimes reach a height of 60 or 70 feet in three weeks.

According to the experimenter, one of the most satisfactory growths have been the phyllostachys pubescens, valuable as timber and particularly relished for eating. The tender shoots, when six or eight inches above ground, may be eaten as a salad and are also used in other culinary ways. Another edible variety is the phyllostachys henryi.

Exclusively timber varieties include the phyllostachys puberula (Japanese hachiku) and phyllostachys quillioi (Japanese mandrake) both of which were found to thrive in Louisiana. They are said to be adapted for house timbers, telephone and telegraph poles and boat spars. "The four varieties are hardy and do well in Louisiana and will stand a temperature of zero, growing rapidly to perfection in southern alluvial soils," said Mr. Mcllhenny. "In my opinion these four species of bamboo are destined to play an important part in southern Louisiana agriculture."

"MOVIE" MACHINE FOR EVERY SCHOOLHOUSE

WASHINGTON, August 2.—A "movie" machine in every public school to aid in the education of the children of the country is the aim of the Visual Education association, which has opened headquarters here. Charles F. Hunt, secretary of the association, says congress will be asked to appropriate funds to cooperate with the states in carrying out the program, the expense being borne equally by the federal and state governments.

While estimating the ultimate cost at \$19,500,000, Mr. Smith anticipated that this sum would be needed by installments and he announced that the association would ask for an immediate appropriation of \$5,000,000 available for expenditure during the next three years.

The association is incorporated in the state of Indiana its organizers including Charles A. Greathouse, former Indiana state superintendent of public instruction; Dr. J. N. Hurty, Indiana commissioner of health, and B. R. Inman, manager of the Indiana chamber of commerce.

W. O. W. DRILL, BUTTE

BUTTE, Mont., Aug. 2.—The annual drill contest of the Woodmen of the World drill teams of the Pacific jurisdiction will be held in Butte next year. Butte was assured the honor of acting as host to the contest when the local team at the recent meeting in San Francisco won first place in the contest and temporary possession of the trophy cup, which had been held by Golden Gate teams for 10 years.

COME! COME!

THE MYSTERY OF THE CYCLOPS —A U. S. NAVAL VESSEL THAT DISAPPEARED

What became of the great United States naval collier "Cyclops," a ship of 19,000 tons with 295 men that sailed from Barbados, in the West Indies, on March 4, 1918, on war duty and never reported since?

No one knows. That she might have been blown to fragments by a destroyer seems unlikely since no wreckage has ever been found by the cruisers and patrol boats that have retraced the route of the collier. It seems improbable that she was sunk by torpedoes since no S O S calls were sent out. Had she been attacked and captured by an enemy raider, the collier's wireless should have put her in communication with other naval merchants.

The most likely and the most scientific explanation is made by George Noble, a writer in The National Marine Magazine—that the vanished ship owed its doom to gigantic cuttlefish, also known as octopuses. These monsters are the terror of the sea and are known to attain a length of 140 feet.

"Such fish," the scientist explains, "may have reared themselves from the sea, and instead of winding their tentacles around the hulls and riggings and crushing the structure to matchwood before dragging it to their lair at the bottom of the sea, may have helped themselves to the ship's people as delicately and effectively as one plucks gooseberries

from a bush—then sunk from sight and left scarcely a ripple behind."

It could be claimed, of course, that the creature, however gigantic, could not sink a steamship as they are known to have sunk old sailing ships. However, the Cyclops, if attacked by cuttlefish, could have steamed away, but she may have become disabled through engine trouble or some other accident and while rolling helpless, the monsters threw their arms above the deck and helped themselves to the men. The ship, thus helpless, would have more easily foundered in the heavy sea and gale, and thus vanished completely leaving not a trace behind.

Octopuses, the most amazing, the most repulsive, and the most deadly of all sea monsters are shown in "Girl of the Sea." They were photographed by J. E. Williamson, of the Submarine Film Corporation.

In the County Court of the State of Oregon, for the County of Klamath.

In the Matter of the Estate of Suda Ponina, deceased.

Notice is hereby given that the undersigned, has been appointed the administrator of the above entitled estate, and all persons having claims against the same, will please present, properly verified, with vouchers attached, within six months from the date of this notice at the law office of H. M. Manning, Loomis Bldg., Klamath Falls, Klamath County, State of Oregon, that being the place this administrator has chosen to transact the business of this estate. Dated May 8th, 1920. HENRY HOTCHKIN, Administrator.
