Cool, Clean and Sanitary

These words fully describe what the condition of every meat market should be, and it describes ours to a nicety. Our cold storage and other equipment, and our ambition to maintain perfect sanitary conditions in our market, blend perfectly. Consequently, we can sell you meats of all kinds that retain their freshness and wholesomeness long after they leave our shop. All our meats are handled under glass and with extreme care. We overlook nothing which will assist us to carry out our sanitation policies.

### ABSURD NAMES WORK HARM

May Be Witty, But They Too Frequently Tend to Put Community in Disrepute.

Freakish and absurd names given to communities, villages and counties by some waggish wit in the primitive times, have a way of persisting, clinging to the community, so that it is most difficult to get rid of them when a new people have succeeded to residence there. Some of these absurd names are so ridiculous they harm the community, tending at all times to put it in disrepute, make it a jest and byword.

All over the country are to be found places where the old-time wit left his contribution of harmful levity, against which the community struggles. In the northern part of Missouri was a little community that was given, in the days before the war, the rather startling name of Burnshirt. The name grew out of an incident that took place when some big-game hunters were encamped at the settlement. The name appealed to the risibilities of the community and for two generations it was compelled to bear that name. It had a small degree of comfort from the fact that a lesser community, hard by, had won the name of Pinhook. Hoopole township in Posey county, Indiana, is quite the most widely known of any township in the Hoosier state, yet strangers might not be induced to locate there because of the attractiveness or promise found in the name.—Ohio State Journal.

### LIKE RAINBOW IN THE SEA

Gloriously Tinted Water That Washes Bermuda's Shores Is an Ever-Fascinating Marvel.

Hundreds of miles from any coast, surrounded on every side by the restless surges of the great Atlantic—a mere speck in a waste of sea—lies Bermuda. While not strictly one of the West Indies, yet its fauna and flora, its products and its formation, are so similar to many of the Antilles that we may well consider it as a West Indian island gone astray, and set down—or rather pushed up—a thousand miles and more from its fellows.

If the ship arrives at Bermuda by daylight there is ample opportunity for the visitor to view the island as the vessel steams slowly along the northern shores and threads her way through the tortuous channel between sharp-fanged reefs toward Hamilton.

Perhaps nowhere else in all the world is there such gloriously tinted water. Indigo where deep, azure and sapphire nearer shore, opalescent turquoise in the shallows, and marbled with royal purple and amethyst where reefs and corals dot the white sand of its bed, the sea that laps Bermuda's shores is an ever-changing, fascinating marvel; a thing of wondrous beauty impossible to describe in words or to reproduce in pigments.—A. Hyatt Verrill in "The Book of the West Indies."

### Color-Blindness.

It may come as a surprise to many to learn that fewer than fifty-five people in every thousand are more or less color-blind. The commonest form of color-blindness is not—as is usually supposed—the inability to distinguish red and green. That affects one person in fifty-five. The most usual symptom is to get mixed between blue and green. One person in sixty cannot distinguish between brown and green. Color-blindness is more common among educated than among uneducated people, and is far more usual among men than women. Only about one woman in a thousand is badly color-blind. A very odd fact is that musicians are more liable to this affection than any other class or profession. Blindness may cause color-blindness. There is a case of a woman who became entirely color-blind after a form of ear disease, while a signalman who had suffered from lock-jaw or tetanus became equally unable to distinguish color.

### Real Sea Serpents.

The Indian ocean and the waters of the tropical Pacific are inhabited by a great number of wholly aquatic, veritable sea serpents that possess deadly fangs, and sometimes swim in schools of countless thousands. These snakes have a paddle-like tail to assist them in swimming. An offshoot of this species is the sub-family containing the formidable cobras and their allies, according to Raymond Ditmars, curator of reptiles at the New York zoo, who are treacherously deceptive in appearance. All of the very large serpents are members of a single family—the Boidae. None is poisonous, and the members of this family kill their prey by constriction.

### Ants Guard Trees.

The Cecropias are remarkable trees, very widely distributed throughout the tropics. Their slender trunks are crowned with four leaves at the ends of the branches. A few active ants run continually along the branches and leaves, but if the tree is shaken slightly an army of ants rush out by small apertures, ready for a savage assault on the intruder. This is the most terrible guardian that the tree has retained to protect it from its most formidable enemy the "leaf cutter" ant. The defenders rarely leave their retreat, where they live on small whitish egg-shaped bodies about one-twelfth of an inch long, known as Musler's corpuscles.

### NOTICE OF SALE OF IRRIGATION DISTRICT BONDS

NOTICE IS HEREBY GIVEN that sealed proposals will be received until the 20th day of September, A. D. 1930, at the hour of two o'clock in the afternoon, for the purchase of Two Hundred Thousand Dollars (\$200,000.00) worth of bonds of the Langell Valley Irrigation District of Klamath County, Oregon. Said bonds to draw interest at the rate of six per cent per annum, payable semi-annually upon the first day of July and the first day of January of each year until the maturity of said bonds. Sealed proposals will be received by the Board of Directors of said Irrigation District, and should be directed to the secretary of the Langell Valley Irrigation District, care of Ferguson, Fletcher & Mifflin, No. 16 Loomis Building, Klamath Falls Oregon. The Board of Directors reserve the right to reject any or all bids offered.

A. L. WISHARD,  
Secretary of the Board of Directors of Langell Valley Irrigation District.

A-14-818.

### NOTICE TO TAXPAYERS

You are hereby notified that the Board of Equalization will attend on September 13, 1930 (the second Monday in September) at the county judge's office in the oldest court house, and will remain in session for thirty days from that date for the purpose of examining the assessment rolls for the year 1930, and correcting all errors in valuation, description or qualities of land, lots or other property assessed by the assessor. It shall be the duty of all persons interested to appear at the time and place appointed.

All protests against valuations fixed by the assessor must be filed with the board during the first ten days of said session.

J. P. LEE,  
Assessor of Klamath County.

A Herald Want Ad will sell it.

### HAS NURSERY FOR OYSTERS

WEST SAYVILLE, N. Y., Sept. 9.

Propagation of young oysters all ready to "set out" guaranteed to multiply with proper care into a flourishing brood, may result from experiments just concluded by W. F. Wells, of the New York conservation commission, who today reported on his extensive study of oyster breeding.

Mr. Wells, at his laboratory on the shore of the Great South bay, has succeeded in keeping alive millions of young oysters from a larva to the "set" stage. In his report he said that hatcheries modeled after his plant can be built wherein the oysters may be incubated until time to set them out in deep waters.

His method for developing oyster "sets" from oyster seed, or spawns, removes one of the chief obstacles in the commercial propagation of oysters, Mr. Wells said.

"The seeds are so small," he explained, "from the time they are laid by the oyster until they are mature enough to attach themselves to a surface in sets, that experimenters have had the greatest difficulty in devising a practicable commercial method of keeping the tiny shellfish supplied with a fresh supply of salt water and food without washing them all down the drain."

"When the oysters reach the set stage, they can safely be put in the beds to find for themselves. After that time the oyster grows very rapidly for a period of some weeks and gains full maturity within three or four years."

One of the chief obstacles, that of handling the larvae, or tiny eggs, while changing their water, the report says, was overcome by the use of a centrifugal machine, which con-

### AN OLD RECIPE TO DARKEN HAIR

SAGE TEA AND SULPHUR TURNS GRAY, FADED HAIR DARK AND GLOSSY.

Almost everyone knows that Sage Tea and Sulphur, properly compounded, brings back the natural color and lustre to the hair when faded, streaked or gray. Years ago the only way to get this mixture was to make it at home, which is messy and troublesome.

Nowadays we simply ask at any drug store for "Wyeth's Sage and Sulphur Compound." You will get a large bottle of this old-time recipe improved by the addition of other ingredients, at very little cost. Everybody uses this preparation now, because no one can possibly tell that you darkened your hair, as it does it so naturally and evenly. You dampen a sponge or soft brush with it and draw this thru your hair, taking one small strand at a time; by morning the gray hair disappears, and after another application or two your hair becomes beautifully dark, thick and glossy and you look years younger.—Adv.

concentrates the eggs in a small receptacle. The hatching apparatus was made of a series of large inverted glass carboys, fitted with tubes which permitted a fresh supply of salt water and air to percolate so gradually that the development of the eggs was not retarded. Microscopic examination is necessary in following the gradual development of the eggs to the "set" stage.

Mr. Wells declared it is a well known fact that in the last 10 years the production of oysters has been very much reduced. It was to determine the exact cause of this reduction, he said, that his studies were undertaken. It has been suggested, he said, that pollution of the waters has injured many of the most productive beds in Connecticut and in the vicinity of New York.
