

IS ALL READY FOR A BUSY BUICK SEASON

The new Buick garage, Louis Hoagland proprietor, has been given the last of the finishing touches, and now appears among the many splendid garages of gasoline row with its head up, chest out, and with every other evidence of being mighty proud of itself. And, there is reason for this pride.

The display room facing on Klamath avenue, spacious and well lighted, contains three beautiful Buicks. They are real beauties from the standpoint of appearance, and Mr. Hoagland and numbers of Buick owners here will testify that they are beauties from a standpoint of construction and performance also. Resting upon a floor that shines brighter than the well-known "nigger's heel," and set off by light from huge glass windows, the sight of these autos is enough to make a person want to steal one, if it could not be obtained in any other way.

The workshop and washing room are very convenient. The accessory and parts department is in one corner of the display room, and only Buick parts and accessories will be handled by Mr. Hoagland.

Like other auto dealers here, who now they have cars that will stand the test, Mr. Hoagland anticipates a good season.

HAS NEW AUTOMOBILE JACK

A resident of New Zealand is the inventor of an automobile jack consisting of base and head plates connected by toggle point arms that are brought together with a screw terminating in a crank.

After you have ruined a few spark plugs by removing them with a monkey wrench you will get a socket wrench that just fits around the plug and protects the core from accident. It costs only a few cents, and will pay for itself after it has been used a few times.

PERISCOPE SIGNAL IS USED AT NIGHT.

A "periscope" automobile danger signal, which warns motorists of the approach at night of cars or trucks around a curve or corner, is now used in Ohio. The signal works automatically. It consists of a nine-inch red lens with a mirror so arranged in back of it that it catches the rays from the headlight of a car approaching around the curve, and throws them into the red lens, illuminating it.

BEST WATER FOR RADIATOR.

Do not forget that the very best water with which to fill up the cooling system is rain water or water by melting snow. This is what is known as "soft water," which means that it is free from mineral constituents, which are deposited on the pipes and jackets from ordinary water.

Don't fail to realize that driving downtown is a man size job and requires your full attention.

NOVEL USES FOR TRACTORS

The field for the farm tractor is widening. Nowadays one finds them operating successfully on such jobs as operating a sprayer, constructing sewers, moving warehouses, rooting up hedges, dragging logs, hauling road material, cutting ensilage, shelling corn, mowing golf links, and a motor cultivator even has been employed in the north to remove snow.

An ordinary jack may be used in an emergency as a wheel puller. The jack is rested on the hub cap and a rope is passed around two opposite spokes and then over the top of the jack. When the power of the jack is applied off comes the wheel. In certain cases it is necessary to use a block or some similar object between the bottom of the jack and the axle.

While tightening the brakes do not get them too tight. It is easy to set them up too far, and then the operator wonders where all his power has gone. Jack up both wheels and see if they are still free after adjustment.

Don't adjust the brakes too close when the car is without a load. If you do the brakes will bind when the car is loaded and the wheel base slightly extended. Rough roads will augment the trouble.

CALIFORNIA TO PLANT TREES.
SACRAMENTO, Feb. 19.—A definite standard plan of highway tree planting for California is now being drafted. It is announced here, by a committee named by the state highway commission and the state forestry department.

A good way to test a brake to see if it will hold properly is to speed up the car on the road and to apply the brakes suddenly. Have an observer at the same time not if both wheels at the same time note if both wheels locks and slides while the other revolves.

Sinnapaschugy is the word coined by the Navajo Indians of Utah for motor car, and it is literally translated to mean wagon that goes with a "chug."

PASSING OF THE HORSE

The passing of the horse again is demonstrated by the action of the Sandusky County (Ohio) Horse Owners' Mutual Protective Association which has been rechartered as the Sandusky County Automobile Mutual Protective Association.

It is advisable to clean and readjust the spark plugs occasionally. The points burn away gradually, and if not readjusted cause irregular firing. The motor will also throttle better at slow speeds if the plugs are kept in proper condition.

On the other hand, the spark should be kept advanced as far as possible at all times, just short of the point where it makes a knock. The difference in your gasoline bill will give you a convincing argument in favor of a spark well advanced.

When testing spark plugs by placing them on the top of the engine we sometimes get a good hot spark, but when the plug is replaced in the cylinder it will not ignite the charge because of the resistance offered by the compression in the cylinders. While the current may jump the gap at atmospheric pressure, yet when resistance is increased between the points of the gap no spark results.

Watch out for spark knock on a hill. Retard your spark as soon as it is heard. It flattens the bearings and kills power.

Be Prepared For a Good Year on the Farm!

Modern farming methods will bring a rich harvest to a farm which would be worthless with old-fashioned methods. Plow this season with an
