DEMAND FOR LUMBER MAY RAISE PRICES

SAN FRANCISCO, Sept. 20.—Steady improvement continues to be the order of events in the lumber industry.

This improvement is particularly discernible in the Southern pine field, but other manufacturers of lumber are beginning to feel the influence of the buyer and consequently business may be stated as better in all divisions of the trade, according to the "American Lumberman." It says: Here and there some advances have been made on such items as car siding and the better grades of flooring, though as yet there has been no general advance in lumber prices.

Experienced observers, however, are united in the opinion that should business continue its present trend price advances are certain to occur within a short time.

Until the latter part of August prices showed a steady decline, this decline being slighter and slighter as the months passed.

The law of supply and demand governs lumber prices, and consequently up until August lack of demand bore prices downward, but now, if the present tendency to purchase heavily and to rush building continues, the same law is going to send prices upward unless this tendency is equalized by a substantial reduction in freight rates, which, although believed absolutely necessary in the lumber trade, are not an immediate prospect.
