

# LONDON SPORT CRAZE GROWING

LONDON, Sept. 21.—Enthusiasm for sport is greater in London this season than ever before, asserts the Evening News in an article which declares that in and about the city today there are 55,000 tennis players, 5,000 amateur cricket teams and 45,000 regular football players. Recreation by five years of army life is advanced as one of the reasons for the record-breaking keenness for outdoor games.

Every lawn tennis club has a long waiting list, the newspaper states, groups for tennis, cricket and football are at a premium, and the space available is hundreds of acres short of what is required. A tour of the playing fields indicates that there are tens of thousands who would join in if room could be found for them.

The London Playing Fields Society has 125 tennis courts which accommodate 2,000 players. The number of courts is five times that maintained by the organization before the war, yet it could have let them three times over for the present season. There are 200 clubs in Greater London affiliated to the Lawn Tennis Association alone, controlling 20,000 players, while 30,000 players are registered at the London County Council courts.

The secretary of the Southern Counties Cricket conference, in which there are 270 clubs from Greater London, estimates that 5,000 acres are needed in this sport. He estimates that the clubs now own their own grounds number 700. The sports club of one large catering firm has 18,000 members and occupies 70 acres. One of the banks has spent 70,000 pounds on a sports ground in South London. Illustrative of the growth of outdoor activities among commercial companies is the fact that there are now 140 firms in the Business Houses Sports Association, compared with 50 in 1919.

London is encircled by a great belt of playing fields. One of the few pieces of ground still available consists of a 20-acre plot for which a railway company wants 600 pounds an acre.

# FOWLERS STILL GET GOOD BAGS

The migratory bird season opening was welcomed with great joy by the sportsmen of Klamath county last Thursday and from the opening date to the present, hunters have daily left the city seeking the wild ducks in the haunts on the upper lake and on the many small ponds and creeks in the county.

A large number of hunters have sought the many "cross over" spots on the upper lake where the ducks have always in the past swung low in their flight, bringing many a choice bird within reach of the hunters' gun. Near Rocky Point, much competition has been indulged in to secure the little spot near Rock Creek where from time immemorial, practically every flock of ducks southward bound has dipped from the skies and sailed with wings set, low over this spot. Hunters report very fair success at this place.

Below Keno, many nice bags of ducks have been obtained and much success has come from the region on lower Klamath lake. Many flocks were seen there two weeks ago. Hunters though are careful not to cross the demarcation lines between Oregon and California in a game region from the sunny southern state is on watch for violations of the law. No Canada geese nor brant have come south yet and the reaches of California are the favorite grounds for them.

# Close to Death in Mountain Cravasse

BEND, Or., Sept. 21.—A masked cravasse near the top of Bachelor mountain nearly caused the death of Jesse Tetherow, rancher, when he plunged over the edge while accompanying Mr. and Mrs. John Luelling, of Madras, on the climb, a favorite among tourists.

Tetherow lay senseless for hours while his companions went for help, then regained sufficient use of his faculties to clamber out of the cravasse. He met the rescue party near the base of the mountain, then collapsed. He is now believed to be out of danger.

The accident is the first of the kind occurring in this section in several years.

# \$60,000 NEEDED TO STOP WRECKS ON THIS COAST

Herald Washington Bureau WASHINGTON, September 21.—

Treacherous and little understood ocean currents off the Pacific coast, such as those which contributed to the recent wrecks of the Alaska and the San Jose, are to be studied and charted in a more complete fashion than ever before if congress votes the \$60,000 needed. In the program of the coast and geodetic survey for the coming year this work will be stressed even to the exclusion of other important work.

Observations recently made of Pacific coast currents have resulted in the remarkable discovery that the effect of prevailing winds along the coast on currents is not in its own direction, but at an angle therefrom. Thus, a wind blowing parallel with the Pacific coast produces a current not in its own direction but 20 degrees to the right thereof. Running directly with the wind, therefore, a vessel might be sent on the rocks.

Jones Tells of Currents In a letter of Representative Sinnott, Colonel E. Lester Jones, director of the coast and geodetic survey, tells about it as follows:

"A survey of currents along the Pacific coast is a matter which has long been giving me deep concern and which I have emphasized repeatedly in my reports and in special publications dealing with the matter.

"The danger of navigation on the Pacific coast has long been appreciated by this bureau and I have repeatedly requested increased appropriations for the purpose of making a systematic study of the current conditions on that coast.

More Money Needed "Our annual appropriation for tidal and current work for the whole of the United States and Alaska is only \$15,000, making it impossible to use a vessel for the purpose of making a detailed study of the treacherous and little-known currents of the Pacific coast. Canada, with a far shorter coastline and lesser maritime interests, expended annually for tidal and current work \$45,000 before the war and at present is expending annually \$50,000.

"By taking advantage of all available means, such as light vessels stationed along the coast, we have secured considerable information even with the meager appropriation at our disposal. The observations made at the light vessels have brought out the important fact that, contrary to the general belief, a wind creates a current on the Pacific coast not in its own direction, but in a direction 20 degrees, to the right of the wind. The importance of this discovery lies in the fact that a wind blowing parallel to the coast produces a current which may tend to set a vessel on shore, a fact which until now has been unknown to the navigator.

"For the coming calendar year this survey will issue current tables for both the Atlantic and Pacific coasts of the United States in which the tidal currents and the wind currents will be given, based on such observations as we have been able to obtain.

Needs \$60,000 "But to bring out to the full the effects of the currents, it is necessary to make a systematic study of the currents all along the coast. An appropriation of \$60,000 will permit the use of a vessel to secure observations at critical points between lightvessels, which is absolutely necessary to link together data obtained at the lightvessels.

In view of the importance of the matter as developed by observations so far obtained, it is planned during the present year to curtail as far as possible other important activities and to employ the funds so conserved for the use of a vessel for about a month on the Pacific coast. It is, of course, evident that this will not furnish fully the information necessary.

Radios for Lighthouses "While the usefulness of radio outfits for position finding at sea has been fully demonstrated, their installation on lightvessels and lighthouse is a matter that fall within the province of the bureau of lighthouses. The commissioner of lighthouses undoubtedly can advise you more fully relative to the status of that matter."

# SAYS HER RECOVERY IS ALMOST LIKE A MIRACLE

From Helpless Invalid to Complete Restoration of Health, Strength and Happiness Is Wonderful Change Mrs. Root Experienced in Three Weeks—Statement One of Most Remarkable on Record.

MRS. JENNIE ROOT

"Just a week before I started taking Tanlac I was down in bed so crippled up with rheumatism I could not move without help. My son had taken Tanlac, and it had done him a world of good, so one day he brought home a bottle and said, 'Mother, I want you to take this.' When I had finished that bottle, I felt like a different woman, and by the time I had finished my second bottle, I was out in the garden hoeing.

"Tanlac has simply done wonders for me; it almost seems like a miracle." This is the remarkable statement made recently by Mrs. Jennie Root, residing at 1499 Powers street, Portland, Oregon, and is only one of tens of thousands from well-known men and women who are daily testifying to the powers of Tanlac.

Continuing her wonderful statement, Mrs. Root said, "For years I suffered terribly with rheumatism, and would often be down in bed for days at a time. In the last five years there was not a time that I didn't feel those rheumatic pains all through my body. About two months ago I got very much worse and my arms and legs were so bad I was almost helpless, and couldn't even hold a pen to sign my name. I was so weak I could not do any housework. I couldn't even sleep, and had no rest, day or night. Even to walk a few steps would tire me out completely. When I tried to walk I would stagger, and when I did walk a little way and sat down I could not get up without some one helping me. I had no appetite and hardly ate enough to keep me alive. I could not stoop over far enough to get my shoes on.

"I never knew what a night's sleep was, and would lie awake for

hours. At times I would get very cold and would have to get up and sit by the fire all huddled up, and my daughters would put hot water bottles all around me. I was treated by four doctors, and took all kinds of medicine. Nothing ever did me any good. I am just like a different person now. All those terrible aches and pains have left me, and only the other day I was able to walk up four flights of stairs in an office building when the elevator was out of order.

"My appetite is just splendid now, and just today, for the first time in years, I felt so hungry that I had to go and eat a piece of pie between meals. In fact, I can't remember the time that I have felt as well as I do now. I have not only regained health and strength, but I have gained 14 pounds in weight. To tell you the truth, I wouldn't exchange the benefit I have received from Tanlac for the best ranch in Oregon, and I will praise it as long as I live."

Tanlac and Tanlac Vegetable Pills sold by Druggists everywhere.—Adv.

# CIRCUS GATE FUNNY PLACE

There are lots of happenings on the front door of the Sells-Floto circus, coming to Klamath Falls on Monday, September 26th, that have their humorous aspects, and they make the hard grind for the doorman brighter through that fact.

Of course, parents will always try to get their children in free. The doorman assigned to collect the price of children's admission from such parents has a system. A lady will come staggering under the weight of a 9-year-old boy, and the doorman will halt her politely and say: "Madame, you'll have to pay the children's admission for the youngster."

"But he's only two and a half years old!"

"Ah, madame, that may be so, but, you see, we are required to admit only half-witted children over age. We are expressly instructed to collect for all intelligent looking boys and girls. Now, this child has a fine forehead—a very intelligent looking lad. I congratulate you."

By this time the woman will be gladly digging for the half fare necessary. It never fails to work, and, strange to say, very few women smile at the broad subterfuge.

This same doorman once varied his talk when a colored woman came to the front door with her own admission ticket and four husky boys and girls, ranging in age from 6 to 11.

"Madame, you'll have to pay for the young people," he explained. "You see, the government requires a luxury tax for all good looking children. Such children as these—and they are attractive, aren't they?—are luxuries."

The colored woman snorted: "Lan' sakes! Luxuries! 'Deed not! Dese heah ain't luxuries. They'se miseries!"

Vaudeville at Strand Sunday, 19-24

# KLAMATH FALLS Mon. Sep. 26

KLAMATH FALLS OREGON  
WHERE PARTICULAR PEOPLE BUY THEIR DRUGS

## THE KLAMATH GRAIN EXCHANGE

Sole agency for the largest Western Milling concern.  
Will buy your grain at top market prices for cash. See or phone  
BOLDISCHAR AND VOCHATZER, Malin, Ore. and Klamath Falls, Ore.

## Hot Water Each Morning Puts Roses in Your Cheeks

To look one's best and feel one's best is to enjoy an inside bath each morning to flush from the system the previous day's waste, sour fermentations and poisons, also those who wake up with a coated tongue, bad taste, nasty breath, others who are bothered with headaches, bilious spells, acid stomach or constipation should begin this phosphated hot water drinking and are assured of very pronounced results in one or two weeks. A quarter pound of limestone phosphate costs very little at the drug store but is sufficient to demonstrate that just as soap and hot water cleanses, purifies and freshens the skin on the outside, so hot water and limestone phosphate act on the inside organs. We must always consider that internal sanitation is vastly more important than outside cleanliness, because the skin pores do not absorb impurities into the blood, while the bowel pores do.

Women who desire to enhance the beauty of their complexion should just try this for a week and notice results.

## Eyes Made Equal

If your eyes are not working together—if one of them is unequal to its task—you are under a great disadvantage.

If your eyes are not serving you properly, everything you do will be worse than it should be—though seeming right to you.

Think what this means. How easily a reputation for skill may slip away from you and your earning capacity lessened!

You can only be at your best while both eyes are giving you their best service. If they are not, waste no time in hesitation, but call and let us make a careful examination.

## Cafeteria at High School Makes Good From the Opening

The cafeteria at the county high school instituted Monday by the girls of the second year domestic science class has proved to be very successful so far this week and a daily patronage of 40 and more have lined up in the dining room at the noon recess period.

During the year of 1916 the cafeteria at the school was heavily patronized and a very creditable meal served at a small cost. Since that time food prices have risen and the wide range of edibles presented at that time could not be included in the present day menu. Twelve menus have been prepared by the domestic science class for the first month. Miss Avis Dougherty, domestic science instructor states that her classes are elated over their initial spreads.

A new letter-stamping machine moistening the envelopes instead of the stamps, and can attach 2,000 stamps an hour.
