

BIRMINGHAM TO CELEBRATE FOUNDING DAY

BIRMINGHAM, Ala., Oct. 17.—The chief feature of Birmingham's celebration of her 50th birthday during the week of October 24-29 will be the historical pageant depicting the half century of development from a group of cornfields in 1871 to the south's leading industrial center in 1921.

Since the first house was built in Birmingham only 50 years ago, the pageant can present only a half century of the history of the city itself. The early history of Alabama, colonial days and the Civil war period and reconstruction will be grouped in a prelude. The main pageant will consist of a series of separate episodes showing the various periods in the building of Birmingham.

Fifteen hundred persons will take part, including a chorus of 500 specially trained voices, and several hundred young people who will take the dancing parts. Orchestras and bands will provide the music.

The pageant was prepared from a mass of data compiled by local historians. The episodes to be presented will show the discovery of coal, iron and limestone in large quantities, in sight of the present city of Birmingham, the construction of the first small, crude iron furnaces, the opening of coal mines in what are now the limits of the city, the growth of the city from a crude, rough, lawless mining camp, the boom period followed by the financial disaster of the 80's, the period of deflation and then the launching of Birmingham on a firm foundation.

Then will come the experiments in steel making, which were finally attended by success, the entry of the United States steel corporation into Birmingham, following the acquisition of the properties of the Tennessee Coal, Iron & Railroad company, the construction of many steel mills, the passing of the city from the raw material to the finished product era.

The closing episode will deal with Birmingham of today, a city of 200,000 people. It will show coal, iron and limestone, the three requisites for steel making found side by side within sight of the many furnaces where pig iron is made, at the side of the giant steel plants where finished steel is made and then converted into all kinds of steel products, where it is loaded on barges made of Birmingham steel, floated down a river open to perennial navigation to Mobile and New Orleans, where it is loaded into steel ocean liners made of Birmingham steel by a Birmingham corporation and then sent to every civilized nation of the world.

One part of this episode will show the opening of the Warrior river to navigation after the government had constructed lock 17, which has a dam 63 feet high, and two locks with a lift of 31 1/2 feet each, more than three feet more than the Gatun locks on the Panama canal. This dam created Lake Bankhead which backs up water more than 60 miles, enabling Birmingham to tow her products to the gulf ports.

Other episodes will depict the progress of Birmingham along educational, social and civic lines from the early days when lawlessness was rampant until today when the city lays claims to attractions as a home city second to none.

Make that idle dollar work! Put it in the bank.

School to train Labor and Farm Leaders Opened

KATONAH, N. Y., Oct. 17.—Brookwood, a resident workers' college, opened here today with more than 30 men and women students who will train for leadership in labor and farm movements.

The college, which was founded by a number of labor organizations, aims to train economists, statisticians, writers, teachers, organizers and other workers and speakers "in order that these (labor) movements may have people coming from their own ranks with their own point of view who are fully capable by training and knowledge of exercising a genuine statesmanship."

Brookwood will be not only a college but an experiment in community living. Every one will take his turn at washing dishes and performing the necessary tasks about the school grounds.

"Faculty and students perform the jobs that call for attention from cooking to wood cutting and from farming to dish washing," said the college prospectus. "The importance and dignity of hand work and head work are both fully recognized."

The school will be one of genuine democracy and self government, according to announcements. The ruling power of the college will be an academic "town meeting," where everybody will have one vote, whether faculty member or student.

The course of study will be two years, but there will be a third year of post-graduate work of a specialized character for those who wish. The regular course the first year includes, social problems, history of civilization, English language and literature and science. The second year continues social problems and includes modern social history, science and certain practical courses, such as statistics, labor organization, labor and farm journalism and workers education.

Students to the college are chosen by labor organization who have donated scholarships.

The cooperative labor committee,

which took a prominent part in founding the institution is headed by John Fitzpatrick, Chicago labor leader, and James H. Maurer, president of the Pennsylvania State Federation of Labor.

NATURE FAKER

A bullfrog with the ears of a rat has been caught at Packerville, Conn. Joe Welch, who has caught bullfrogs of all colors and sizes, captured it, according to reports. Why nature endowed it with two rat ears he leaves for others to determine.

Hot Water Each Morning Puts Roses in Your Cheeks

To look one's best and feel one's best is to enjoy an inside bath each morning to flush from the system the previous day's waste, sour fermentations and poisonous toxins before it is absorbed into the blood. Just as coal, when it burns, leaves behind a certain amount of incombustible material in the form of ashes, so the food and drink taken each day leave in the alimentary organs a certain amount of indigestible material, which if not eliminated, form toxins and poisons which are then sucked into the blood through the very ducts which are intended to suck in only nourishment to sustain the body.

If you want to see the glow of healthy bloom in your cheeks, to see your skin get clearer and clearer, you are told to drink every morning upon arising, a glass of hot water with a teaspoonful of limestone phosphate in it, which is a harmless means of washing the waste material and toxins from the stomach, liver, kidneys and bowels, thus cleansing, sweetening and purifying the entire alimentary tract, before putting more food into the stomach.

Girls and women with sallow skins, liver spots, pimples or pallid complexion, also those who wake up with a coated tongue, bad taste, nasty breath, others who are bothered with headaches, bilious spells, acid stomach or constipation should begin this phosphated hot water drinking and are assured of very pronounced results in one or two weeks.

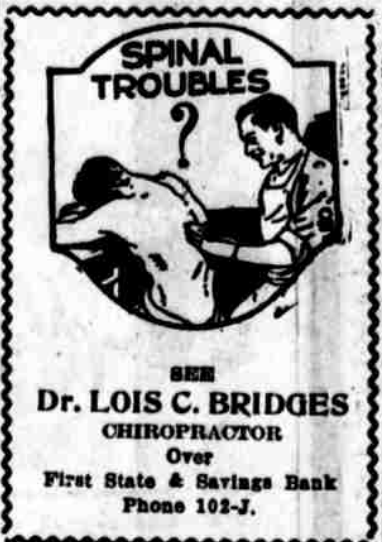

A quarter pound of limestone phosphate costs very little at the drug store but is sufficient to demonstrate that just as soap and hot water cleanses, purifies and freshens the skin on the outside, so hot water and limestone phosphate act on the inside organs. We must always consider that internal sanitation is vastly more important than outside cleanliness, because the skin pores do not absorb impurities into the blood, while the bowel pores do.

Women who desire to enhance the beauty of their complexion should just try this for a week and notice results.
