

IN THE COURT

Diamond Iron Works vs. Klamath Pine Manufacturing Company
Diamond Iron Works, a corporation, filed suit against the Klamath Pine Manufacturing company on a note for \$1,000, involving materials, and asks for interest at 8 per cent from May 15, 1921, until paid.

Sparrenton vs. Garrett
J. L. Sparrenton filed suit this morning through his attorneys for the collection of \$288.40 on a promissory note against W. T. Garrett, and asks for interest and \$50 attorney's fees.

Zumbrum vs. First State
Wm. Zumbrum filed his petition this morning in the First State & Savings bank liquidation matter, involving \$1,200, in the circuit court covering checks for \$1,090 and \$10 respectively.

MANY ENTER CONTEST

Four Prize Winners Among Essays on Care of Teeth

Chosen as the winners from the many essays entered by the school children of Klamath county in the contest staged by the state board of dental examiners were those by Ruth Klingsburg, seventh grade Central school; Vesta Buesing, eighth grade Lone Pine school; Claudine M. Miller, sixth grade, Chiloquin school; and Estella Hilton, sixth grade Riverside school. These essays on the care of teeth will be awarded \$10 prizes and will be entered in the state contest in which \$25 prizes will be awarded the winners.

Contest judges were Dr. Paul Noel, Dr. E. G. Wiscarver and Mrs. William Ganong.

The following essay was written by Estella Hilton:

Grade 6, Riverside

THE TEETH AND THEIR RELATION TO HEALTH

The teeth are one of the most important parts of the body, and if they are not well cared for you cannot expect to have good health. There is only one way to have good teeth, and that is by good care.

If we do not take special care of the teeth you would have an unclean mouth. Tooth ache and disease of the gums may result. Neglect of the first teeth is a frequent cause of the decay of the second teeth.

If a child is taught to use a tooth brush in early life he will be apt to take proper care of his teeth throughout life. It is more important to brush the teeth than to wash the face. If a child's teeth are decayed he should be taken to a dentist at once.

There are 20 teeth in the temporary set, 10 upper and 10 lower. These temporary or baby teeth must not be neglected, although they do not last a lifetime. Loss of temporary teeth before the permanent teeth are due to take the place leads to ill-shaped, undeveloped jaws, which cause: 1—Crowded permanent teeth. 2—Growth of adenoids. 3—Mouth breathing, which may result in weakening the lungs and other trouble. If the teeth are not taken care of one will have stomach trouble because he cannot chew his food well. There are 32 teeth in the permanent set, 16 upper and 16 lower.

The first permanent molar, come just back of the baby teeth and appear when the child is about six years of age. These are considered the most important teeth we have.

They are often destroyed by decay, which is caused by neglect, because they erupt at such an early age and are often mistaken for part of the baby set. Watch for them. Guard them carefully and keep them clean.

Remove all particles of food between the teeth, using dental floss or a quill toothpick, being careful not to injure the gums. Brush the upper teeth downward, sweeping the bristles over the gums and pressing between the teeth. Brush the lower teeth upward. Have a dentist look at your teeth several times a year.

KILL WIFE, SELF

NEW YORK, April 20.—Frank Mullen killed his wife goodbye on a subway platform today and then shot her and killed himself. She was taken to a hospital in a serious condition.

WORN U. S. PAJAMAS

SCUTARI, Albania, April 20.—“Gift of the American people” read labels on the pajama-clad bodies of the two notorious insurgents which hung from a tree in the center of this town for several days.

SHASTA VIEW ENTERTAINMENT

The pupils of the Shasta View school near Malin are preparing a program of songs and short plays, which they feel sure will interest the patrons, and public on Friday evening of this week.

There will be seen representations of witches, Puritans, Indians and negroes. The principal play, “In Witchcraft Days,” portrays the accusation and trial of a witch in Salem, Massachusetts, in 1692.

The program will be found varied. An admission fee of 15 cents will be charged to defray expenses. Children under 12 years free.

NEW TODAY

The ladies of the Episcopal Guild will give a cooked food sale at Johnstone Furniture store, Saturday, April 22 at 10 o'clock. There will be a generous supply of cakes, pies, salads and candies. 20

DAIRY COWS FOR SALE—Inquire W. A. Koenig, 4 1/2 miles from Klamath Falls, Midland road. 20-26*

TO RENT—Clean housekeeping rooms. In new private house. No children. Must give reference. 1211 Crescent Ave. Phone 394J. 20-21*

REFRIGERATOR FOR SALE—45 lb. ice box. Used about 6 months. Phone 544M. 20-21*

FOR RENT—4 room furnished apt. Phone 273J. 20-22

WANTED TO PURCHASE—A gasoline launch and some row boats. Must be in good condition and the price right. Give full particulars. Address R. C. Sprink, Chiloquin, Oregon. 20-21

Eggs 26 cents.
Newtown apples, \$1.50 a box.
Potatoes \$2.50 and \$2.00 per hundred.
Whole milk .07 cents per quart.
Green vegetables daily.
Public Market, 9th & Klamath. 17-20

LOST—On Tuesday evening, a Chesapeake dog with small white spot between fore legs. Finder phone 445W. 20-21

FOR SALE—2 horses, one 7 and one 10 years; double harness and farm wagon. Price \$100 cash. See Heavilin, about 3 1/2 miles from town on Keno road or C. I. Reckard at Rex Cafe. 20-25*

President Wood Said Something

Last week, President Wm. M. Wood of the American Woolen Company, in a statement which was read with greatest interest and appreciation, declared that an era of prosperity is, undoubtedly, near at hand.

President Wood reviewed the many favorable conditions, including his own business, and the spirit of optimism almost generally expressed by those with whom he had come into recent contact.

“We are on the very brink of prosperity,” concluded Mr. Wood.

Simultaneously Wm. Filene's Sons Company of Boston announce that the greatest volume of business in the history of the firm for one day was done last Saturday—the day before Easter.

Here's What will Look Good to Klamath Falls People

K. Sugarman says he has had the best Easter Saturday in the history of his store, and with all prospects of a favorable season ahead. With weather, work and everyone getting together and boosting things along, he expects a very healthy business for the year of 1922.

Developing Your Film

During the course of a day several dozen rolls of films are brought to Underwood's for development. These are taken to the “dark room,” from which every ray of white light is carefully excluded. It is lighted by a number of “ruby” electric lamps which do not affect the sensitive film.

Here an ingenious device perforates each film with a number, and it is by means of this number that the film is afterward traced through the various processes it undergoes.

The films are placed upon a rack and then suspended in a tank of developer. There are four tanks in each series. Two contain water and the others are for developer and fixer, respectively.

The formula for developer is one that has been very carefully worked out by experts in the employ of the Eastman Kodak company of Rochester, New York, and by them given to Underwood's Pharmacy. The chemical composition has been so arranged as to get the best results out of all films. If the film has had too short an exposure—or too long—first-class results cannot be expected, but our system of development will get the very BEST results out of every film that it is possible to get. Films are left in the first tank for 20 minutes. Then are rinsed and passed to the “fixer,” which clears the film, and a final period of about 20 minutes in the last tank of running water, which completes the development process.

The films are then suspended in a current of air and dried by electricity, after which they are cut up and placed each in its proper envelope.

The Art of Photography

Had a crude beginning just one hundred years ago. It has evolved from a process that required hours of exposure and development to the modern “snap-shot” that is quicker than lightning.

In fact, photography is almost a miracle, but we accept it as a matter of course, giving little thought to the marvel of it.

Few people know the process a film goes through when it is developed and printed. Klamath Falls has one of the most modern plants in the country for doing that work.

Underwood's Printing and Developing room has been equipped with the best machines that are obtainable. The processes followed are those used by the Eastman Kodak company, and it is needless to say that they have spared no expense to make them as nearly perfect as possible.

Hundreds of satisfied customers send in films from all over the county. Work has been received from many distant points—Alaska, Idaho, Dakota, Arizona and California.

Every roll of film receives the same careful handling, and no effort is spared to get the very BEST pictures out of it that can be obtained.

Films left before 9 o'clock each morning are ready for delivery at 5 p. m. Films arriving by parcel post in the afternoon or evening, are mailed out the NEXT day.

ENLARGEMENTS

A fine enlarging camera forms part of our equipment, and pictures from good negatives can be enlarged to any size desired. A special offer of one 8x10 enlargement for 50 cents. Send us any good film for a trial.

Printing the Picture

One of the most interesting machines in the Underwood finishing department is the PA-Ko Printer.

This consists of a table, before which the operator sits, with convenient shelves and cupboards for storing the sensitive paper upon which the prints are made.

Beneath the table are several high-power electric lamps. A clever device permits any sized opening to be made in the printing frame and the film is placed over it with a sheet of sensitive paper upon it. A pressure of the foot and the powerful light flashes through the film upon the paper. This is then placed in the developer, the picture appears, and the paper is passed to a fixer. From here the picture goes to a “washer” that is operated by water power, and all chemicals are completely removed from the paper.

The wet prints are now taken to the PA-Ko print drier, which consists of a huge revolving drum heated by electricity. Around this drum is wound an endless “apron.” The prints are placed upon the apron, carried by it over the heated drum and finally dropped into a receptacle absolutely dry. From here they are taken to the sorting table and each group of prints placed in the proper envelope, and is ready for delivery to the customer.
