

Good Jaw Exercise

Anchor an upright bar like this to a table and try it. That is, try it if you're tired of life anyhow. Great exercise for the jaws. Mlle. Gladys Portia, New York acrobat, finds it.

FOREST SERVICE OFFERS COURSE

Kiln Drying, Gluing, Boxing And Crating to Be Taught By U. S. Department

PORTLAND, Aug. 15.—District Forester Geo. H. Cecil has just announced that the U. S. Forest service is expanding the instructional work of the Forest Products laboratory at Madison, Wisconsin. Experience with courses in kiln drying and manufacturing of boxes and crates show this to be the best means of getting the laboratory's results to the lumbering and wood using industries, Cecil states. A course never before given deals with the gluing of woods, a subject of particular interest to veneer, sash and door, and furniture manufacturers of this region. The new course starts on September 11.

Three short courses will be given in September as follows:

The kiln drying of wood, September 11 to 22.

The gluing of wood, September 11 to 16.

Boxing and crating, September 11 to 16.

The course of kiln drying has been given 27 times with a total attendance of 292 men. Five of these courses were given during the past winter on the Pacific coast and in the inland empire. The course in boxing and crating has been given 16 times with a total attendance of 143 men. The men who have taken these courses represented a large variety of interests and came from all parts of the country and even foreign countries.

In the new one-week course in gluing, the following subjects will be covered: structure of various woods and how it affects gluing; prevention of shrinking, swelling, warping and cupping in boards or panels; effect of moisture in wood on glue joints; selection and use of animal glues, vegetable glues, and water-resistant glues; principles of laying veneer and plywood construction; control of temperature, pressure, and assembly time in gluing; testing strength of glued joints; and analysis of defects common in gluing.

These courses, foresters say, are of a practical nature; they are for industrial representatives and do not call for any educational requirements. The purpose of the forest service in offering them is to help the industries to get better results with more of the lumber they manufacture or buy. In this way not only will less timber need to be cut but the profits resulting from efficient production will be greater than those derived from present wasteful methods, forest experts state.

Many firms who sent representatives to the forest products laboratory for a week or two of study state that they were able to effect savings and improve the quality of their goods to the value of thousands of dollars annually.

POULTRY DEALERS PLAN MAMMOTH SHOW AT MODESTO

MODESTO, Cal., Aug. 18.—Poultry dealers of Stanislaus county are completing plans for a mammoth poultry show to be held here soon. R. H. McDrew, president of the Breeders' Association, is arranging for the show, which is expected to surpass that of last year when more than 3,000 birds were exhibited.

LITTLE KNOWN PEOPLE FOUND

Warton Huber, Returning Scientist Tells of Strange Discovery

PHILADELPHIA, Aug. 16.—Warton Huber, assistant curator of the ornithology section of the academy of natural sciences, returned recently to this city from hitherto little known regions of Nicaragua where he assembled a large collection of birds, beasts, fish and reptiles, a number of which he believes have not yet been classified. He also claims to have penetrated to the villages of Sumo Indians who rarely had seen a white man. The scientists' specimens include 600 birds, 40 rare mammals and 2,000 fish, reptiles and insects all of which will be placed on exhibition in the local institution.

"My research work was done about 180 miles inland from the Nicaraguan coast," said Mr. Huber. "We established our headquarters at a small mining camp where we made trips further into the country. The average annual rainfall here is 147 inches. From the time I reached the interior until I left there never was a dry article of clothing on me. The country is infested with red bugs, smaller than fleas which burrow under the skin and inflict serious wounds."

"I went up the Pinza Polka river for 190 miles in a pitpan, an open boat made of a hollowed-out mahogany log. Then in a smaller pitpan I ascended the Banbana river to Mininda. The district is hilly, and covered with tropical forests so dense that it is impossible to enter them until a way is cut by Indians.

"The only inhabitants are a few scattered tribes of Indians apparently of Spanish and Miskito Indian descent. With a body of these Indians as guides I penetrated to certain villages of the Sumo Indians.

"The Sumo men are very skillful hunters, but the tribe is rapidly becoming extinct. With all their ability in hunting and their courage in facing wild animals, they are excessively timid of strange human beings, and will run away even from members of other Indian tribes. Miskito Indians sometimes walk into their villages and take anything they want without meeting resistance. The Sumos, numbering about 500 souls all told, have the slant, almond eyes of the Chinese and their skin is about the same color as that of a Chinaman."

Mr. Huber had with him a number of dogs two of which were killed by jaguars. The scientist believes that fully 40 per cent of the birds and animals he shot were lost because neither dogs nor Indians could make their way into the jungles to the point where they fell. He used dynamite to secure his fish specimens.

Mr. Huber emerged from the jungle region weighing 40 pounds less than when he entered, at which time his weight was 180. Although he warded off illness during his expedition, he was taken down with fever immediately it was over.

Farming

Grass Mixture Advice Given

The experiment station can make the analyses of grass seeds to go into mixtures, advice just how much to use in the mixture and how much to sow. Have the seed tested early.—Oregon Experiment Station.

Dig Out Sick Plants

Diseased potato plants cannot be quarantined in the field nor is there a treatment for many field diseases. The sick or diseased plants should be dug out and destroyed.—Oregon Experiment Station.

Don't Burn Straw Stacks

As the threshing season approaches farmers should bear in mind that the burning of straw stacks means a loss of both nitrogen and organic matter to the soils. A ton of mixed straw contains practically the same amount of plant food that a ton of barnyard of manure contains. This material of course, is not as readily available as the plant food in the manure but on the heavy soils gives good results.—O. A. C. Experiment Station.

Apply Lime After Plowing

Legume crops, such as clover, respond best to use of ground limestone on acid soils. Where clover is to be seeded on winter grain next spring, therefore, the lime will need to be applied this fall after the plowing and ahead of the grain seeding. Farmers contemplating using lime should arrange so they get their supply early enough for face application.—O. A. C. Experiment Station.

Crop Standardization Important

"Standardization of crops as to variety and quality is vital to the welfare of Oregon," declares G. R. Hyslop, farm crop specialist of the

Oregon Experiment station. "Sixty-three different varieties of wheat are grown when 14 and possibly 11 would take care of all needs and give a better yield and quality. The discarding of many of the inferior varieties and standardization of those found best suited to Oregon conditions will bring an increased yield at practically no increase in cost."

Twenty-five thousand acres of grain were inspected and passed as meeting certification requirements last year, reports Professor Hyslop.

Whitman Places Ban On Sorority Houses

WALLA WALLA, Wash., Aug. 18.—The overseers of Whitman college recently decided not to permit sorority houses at the college, but intend to provide suitable accommodations for the sororities in specially constructed dormitories. They contemplate the erection of a new dormitory for 125 girls to be ready in the fall of 1924.

The Best Fed are Healthiest And Happiest

No one lives better for less money than our customers. When you buy here, you can depend upon our giving you just what you ask for, and you may rest assured that what you get here is good.
