Buffet Type RANGE with French Cooking top with French Cooking top

The wide and shallow firebox has many advantages

The correct design and liberal proportions of this Pacific Coast firebox insure quick cooking and baking. It brings the heat directly up under the cooking top and gives "volume" heat distribution entirely around oven. It's a fuel saver also.

The firm that manufactures this splendid range has been designing and manufacturing ranges for Pacific Coast use for over forty years. They know just what the conditions out here are and they build ranges to meet them. They know that a wide, shallow firebox is better adapted to Western fuel than any other type of firebox. This very feature is sufficiently important in itself to recommend it as the range for you to buy.

This French cooking top is indeed a desirable feature.

This style of top, universally used in hotel ranges, has advantages that readily adapt itself to home use. Heats quickly and holds more heat than the partitioned top; consequently is more economical. Being very smooth, and with large flat surface, cooking utensils fit snugly to it. Steaks, chops, fish, eggs and hotcakes can be cooked directly on the French top, as in hotels and restaurants, particularly where the home is equipped with a hood. The French top is shown on the accompanying illustration of the Buffet range.
