Do you know why the "life" of even a good mattress is so short?

A mattress may contain the very best materials but due to the basic construction within a year or so it begins to lose its resiliency, to sag and stretch.
The Edlow-Spring is the first great improvement in mattress manufacture for many, many years. It's a flexible, piano-wire spring. To test its long life and continued resiliency one was collapsed 800,000 times.
Edlow-Spring construction is built between many layers of snow-white, felted, staple cotton and interlaced, curled hair.
Guaranteed not to sag, stretch or lose its resiliency for 20 years. Costs less than 1 cent a night.
Come in when next you are down town. We will be glad to show the Edlow-Spring mattress to you.
