STUDEBAKER Standard Six Duplex-Phaeton

\$467 Down

and 15 monthly payments of \$61.44 each

A Year Ahead of Its Time

The One-Profit Duplex—more up-to-date than the newest "yearly models"

THE Duplex Body, introduced by Studebaker in September, 1924, is a revolutionary new-type open car—with advantages open cars have never possessed before.

Within its steel-framed upper structure are concealed roller side enclosures which the driver may lower in 30 seconds without leaving his seat—giving instant protection from rain, snow, cold or wind. With equal ease the enclosures roll up out of sight.

So obvious are the advantages of the Duplex that Studebaker has become the outstanding leader in the open-car field among cars selling above \$1000.

Triumph of Studebaker Engineering

Other manufacturers will undoubtedly have to follow in Studebaker's footsteps. For any open car today without this unique advantage is obsolete.

But at the time this advertisement is written, Studebaker—and Studebaker alone—offers you this double convenience.

Another important engineering advantage pioneered by Studebaker is the use of genuine, full-size balloon tires, with steering mechanism, fenders and body lines especially designed for them.

Other manufacturers are gradually following Studebaker's lead—but remember, Studebaker developed this important feature 11 months ago.

On the Studebaker Standard Six Duplex-

Phaeton illustrated above, you'll find an automatic spark control, safety lighting control on the steering wheel, 8-day clock, gasoline gauge on the dash, improved one-piece windshield, special coincidental lock of ignition and steering gear, foot controlled cowl ventilator, completely machined crankshaft, oil drain valve which a girl can operate without soiling her hands, and waterproof ignition—all Studebaker features.

These are a few of the points which show that Studebaker cars are more up-to-date than the "new models" now being announced in dizzy succession.

And any automobile expert will tell you that new models of necessity are engineering experiments. Only after months of use in the hands of owners can all mechanical flaws be eliminated. Engineers are human—and it takes time to eliminate mistakes.

Thus, when you buy a Studebaker, you not only get a motor car that is completely up to date, but you also eliminate all guesswork and gamble. Your new car has been tested and proved satisfactory in the hands of thousands of owners.

Come in today—and see the One-Profit Duplex which has made all other open cars obsolete. It is called a "one-profit" car because all vital units are built entirely by Studebaker—thus eliminating the extra profits and overhead of outside parts makers which many other manufacturers must pay and include in the purchase price to you. This explains the fine quality and the low price.
