
Long life added to power and beauty

THE new series Packard Eight—in addition to luxurious appointments, super-power and world-famous beauty—is equipped with the most important improvements since the electric self-starter.

The chassis lubricator automatically delivers oil to the 45 chassis points which require regular attention. The pull of a plunger on the dash in an instant accomplishes the proper lubrication of these moving parts.

The oil rectifier, continually distilling the crank-case oil, assures that every drop remains practically pure. The Packard Eight owner changes oil but four or five times a year.

These improvements are found together only on Packard cars. They make it possible to double the previous assured long life of the Packard Eight.

Many purchase their Packards out of income rather than from capital.

More Effective Coyote Control Is Jewett's Aim

Cooperation of two counties of southern Oregon with two counties in northern California, in the common cause of destroying the menace of predatory animals is sought by Stanley G. Jewett, Oregon director of the United States Predatory Animal survey. Mr. Jewett was a Klamath visitor last night.

"To effectually curb the coyote menace in this part of the country, it is necessary to have all the counties in this section pulling together," Mr. Jewett explained.

"Klamath and Lake counties are spending a lot of money in predatory animal control. I wish that all other counties in the state were as generous in this connection.

"But Modoc county is not spending very much. What I propose is to gather representatives from Klamath and Lake counties in Oregon and Siskiyou and Modoc in California and conduct a conference on the predatory animal menace in this section.

"It needs attention and if all four counties had the same program and put it into effect at the same time results would be more noticeable."

The meeting will be held in Klamath next month, Mr. Jewett said.

That Winter at Valley Forge

Fourth Tire Talk by

Iona Ford

From early November to late in May when the soldiers of the colonies were in the make shift winter camp known as Valley Forge fighting every day for their lives—not from the English soldiers—but from plain cold and hunger: General Washington was confronted with the almost super human task of transporting food and clothing over no roads and with no trucks.

In that day the roads themselves were a barrier to motor travel. No one had been able to make a tire that would stand the punishment and with every blowout there were numerous killings by Indians, and it finally reached the point where they were afraid to venture out of camp. How differently history would have been written had these brave men been able to climb into a half a dozen trucks equipped with SEIBERLING CORDS. Nothing coud have stopped them —food would not have been denied them—and with these things in their favor the war would have been over in a few weeks.

Your Car Deserves Seiberling Cords.

What's causing this landslide of popularity?

Why are motorists everywhere turning from Fours and other Sixes to the New Oakland? Why are they placing orders for it in a volume which is taxing Oakland's capacity to supply?

One Reason is *Oakland value*—New prices, $70 to $350 lower, have established these new motor cars as unequaled investments.

Another Reason is *Oakland quality*—New bodies by Fisher, Air Cleaner, Oil Filter, Four-Wheel Brake refinements and a host of others have been added.

Overshadowing All of course, is *Oakland performance.* Unmatched freedom from vibration due to the Harmonic Balancer, an exclusive feature, gives new emphasis to the car's speed, acceleration and flexibility.

Far ahead in every respect! That's the secret of the turn towards Oakland. That's why this car will win *your* favor over any other in the field!
