

**Some day
You'll have two cars
Why wait?**

How many times have you wished your family had a second car? How often would it have been not only a convenience, but an actual saving?

Buick costs less today than ever before. Operating costs are lower too.

Why wait longer to buy another car? Your "family" car will be in ever-increasing demand during the spring and summer months. Get your Buick now and make the whole family happy this year.

WHEN BETTER AUTOMOBILES ARE BUILT, BUICK WILL BUILD THEM

HUPP ADDS SIX FINE FEATURES

In emphasizing the quality features of their six cylinder car, Hupmobile executives are pointing to numerous improvements which serve, in their estimation, to bear out their contention that Hupmobile builds the closest priced six on the market.

Body features recently added include color options, metal ball-back body for closed cars, cushions upholstered in genuine mohair, contrasting reveals around all windows, and remote control handles on closed cars. Genuine plate glass is used throughout all models, including that in the patented vision-ventilating windshield. This, with the narrow pillar posts, affords clear vision in every direction.

Engine and chassis features include manifold heater; thermostat water control, lessening of the time necessary to bring the engine to its most efficient operating temperature; vibration damper, oil filter, gasoline filter attached to the vacuum tank, and a manifold specially constructed to provide equal gas distribution to all cylinders under high turbulence, during which the heavy particles are thoroughly broken up before reaching the combustion chambers. This manifold, with the heavy crankshaft and light piston and connecting rod assembly, acting in conjunction with the vibration damper, promotes the unusually smooth engine operation throughout the car's entire speed ranges.

Inside the car is noted the grouping of all instruments under one glass, indirectly lighted. Driving lights are controlled from the top of the steering wheel, with extra bulb fitted in the headlights for parking or driving on brightly lighted streets. The manifold heater is operated directly from the dash. In addition to shortening the warming up period it greatly re-

duces crankcase dilution. In grouping all dash gauges under one glass, the dash board is also conveniently arranged for the other controls.

"The Hupmobile six is a car that can be driven smoothly all day long practically at top speed," says R. S. Cole, general sales manager. "It does its work right up to maximum without engine labor. That is something engineers have been striving for years to accomplish."

"We believe this six is squarely in line with the public's conception of a high-grade, modern, up-to-date motor car. It is economical to purchase and operate. We have achieved in it the feature for which Hupmobiles have been widely known—their ability to stay out of service stations. Notwithstanding this attribute, the engine and chassis have been successfully designed for maximum accessibility and ease of adjustment throughout."

SUZANNE SLANE COLLECTION
ST. CLOUD, France, June 1, (AP)—Suzanne Lenglen is now a philatelist. She has been buying stamps with some of the francs she made playing tennis in the U. S. A. In four days she bought \$4000 worth. Mr. Baldwin helped her.

WATER CURE FOR TIRES IS GIVEN

The secret of the new water-bag cure of the Seiberling Rubber Company was revealed today by Elmer Balsiger, Seiberling dealer.

"Scientists have known for some time that water heat preserves rubber while dry heat tends to injure it in the process of vulcanization. Heretofore all tires have been cured by dry steam at 310 degrees. This dry heat was applied from the outside until it penetrated the cords."

"But by the discovery of the water-bag cure tires are not only cured uniformly but are vulcanized in ten to fifteen per cent less time than the old method required," said the local dealer.

In the curing of tires it is necessary to evenly heat and stretch the tire so that every cord will be perfectly taut. To do this a thin flexible tube filled with very hot water under pressure is placed within the tire and it in turn is placed in a metal mold.

"Heat is then applied to the mold and with the water bag furnishing both heat and pressure from the inside the tire receives a uniform cure."

"Formerly by the air bag process the bag inserted in the tire was filled with cold air instead of hot water. Under this method the tire only received heat from the outside metal mold. Therefore, if the tire were properly cured on the inside it was under-cured on the inside and if properly cured on the outside it was over-cured on the outside. Some cords were over-stretched and some under-stretched. In either case equal tension on each cord was impossible."

"By the water-bag process heat is applied from within as well as from without. A uniform expansion in every part and ply of the cord is the result."
