SKIPPER LIZZIE

LONDON. (UP) — Women skippers are rare, and Lizzie Meadows is said to be the youngest in the world. She's only 19, and runs a barge on the Grand Junction canal. When she was 16 her parents died and she had to shift for herself. Despite being a cripple, she finally acquired her barge and is now a full-fledged "capt' 'n."

NEW TORPEDO

LONDON. — A new torpedo tested between Weymouth and Portland may revolutionize warfare, it is said. It has an eight-cylinder engine, instead of the two cylinders of the old type, and will develop astonishing speed. It is said to be more deadly than anything yet invented.

"The Idle Rich," as a new 100 per cent talkie from Metro-Goldwyn-Mayer, brings to us a picture of the famous play, "White Collars," a story of an American family that is delightfully intimate and very real in dialogue, action and atmosphere. In directing this novel domestic comedy William de Mille takes us into the bosom of the Thayer family and makes us laugh and cry with them rather than at them.

AT THE LIBERTY

Interesting and instructive views of Hollywood, with its movie stars and geniuses, to say nothing of the methods of picture-making and the means of providing thrills, form an intriguing background for Art Acord's latest starring Western, "The Wyoming Tornado," a J. THE VALUE of SOUND DESIGN

New Ford engine gives outstanding acceleration, speed and power without sacrificing reliability or economy

THE GOOD PERFORMANCE of the Ford car, so apparent on every highway, is due largely to the sound mechanical design of the engine.

It has outstanding acceleration, speed and power, yet that is only part of its value to you. Greater still is the fact that it brings you all these features without sacrificing either reliability or economy.

That is the reason the Ford car has given such satisfactory service to millions of motorists all over the world and has been chosen by so

many large companies that keep accurate cost figures. In every detail of construction it has been carefully planned and made for the work it has to do.

The design of the compression chamber is an important factor in the efficiency of the Ford engine. It

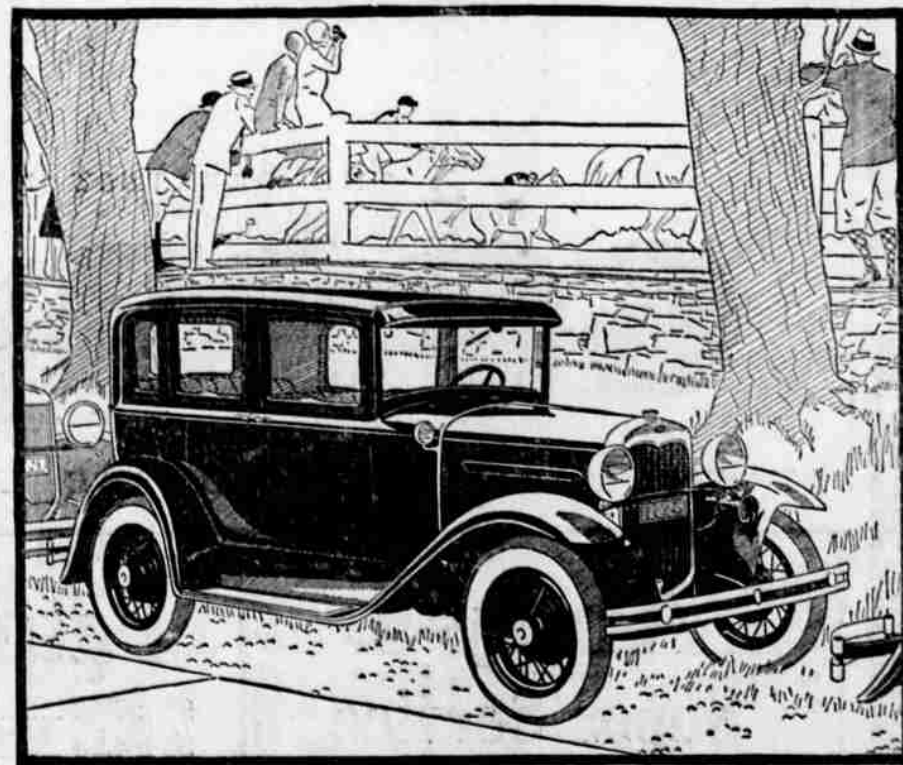

is built to allow free passage of gases through the valves and to thoroughly mix the fuel by producing turbulence within the cylinders during compression. The spark thus flashes quickly through the whole fuel charge, resulting in quieter and more effective engine performance.

Other factors are the direct gravity gasoline feed, the specially designed carburetor, the new hot spot manifold, aluminum pistons, chrome silicon alloy valves of larger diameter, statically and dynamically balanced crankshaft and flywheel, simplicity of the electrical, cooling, lubrication, and fuel systems and accuracy in manufacturing.
