

4 out of 5 city families COOK WITH GAS

Save $\frac{1}{3}$ of YOUR time in the kitchen . . . Heat water in 15 minutes instead of an hour

With every kind of commercial fuel to choose from, 4 out of 5 city dwellers prefer to cook and heat water with GAS—the quickest-cooking, hottest, most efficient, and *easiest fuel to use*.

This is the fuel that Natural Gas Corporation of Oregon now provides in this community—*clean, safe Natural Gas*,—even quicker and hotter than some manufactured gas used in larger cities.

Get Breakfast in a Few Minutes Instead of an Hour!

Your Natural Gas cooks much faster than wood—*faster than any other fuel*. It is the hottest of all fuels. It is *so clean it will not tarnish pots and pans*. It is *so safe it is rated CLASS "A"*, the highest safety rating any fuel can have!

You simply turn on your gas, strike a match for safe and almost instant heat. You actually get *baking heat* in 10 minutes—*broiling heat* in only 5 minutes. And that means faster, easier cooking than you have ever enjoyed before.

Serve Hot Coffee in a jiffy—Hot Food Without Waiting for a Stove to Heat Up TRY A FAST GAS RANGE NOW

For quick meals or a "snack" anytime, we will install a gas range just as quickly as you like. You won't lose a bit of your winter fuel supply—you buy no gas in advance—you simply pay for the fuel your range actually uses.

And the time and work you'll save! Strike a match and your fire is built. No work—no fuel wasted in heating up a whole stove for a little cooking. No waiting—your gas range is hot in a minute.

You'll see for yourself how fast gas cooking really is when your gas range *outspeeds* your old stove day after day.

You'll see the wonderful convenience of real gas ranges, too; you can *regulate* them to just the temperature your recipes require; their ovens are insulated to keep intense gas heat on your food and off you; they are handsome and *clean*.

Strike a Match and Forget Your Cooking!

With the new oven heat regulators you simply light your gas and set your regulator to any heat required—your gas fire will maintain exactly that heat until your cooking is done.

Natural Gas is on When You Want It— Off When You Don't NO WASTE

Please remember, your gas range heats much faster than any other stove. Be ready to cook when you light your Natural Gas; turn it off the instant you are through, and you can't waste it.

Oceans of Hot Water 4 Times Faster than ever before!

Winter ahead—what a hot bath means when you're cold clear through—too cold and tired to build a fire in your cook stove or furnace or wait for a slow water heater!

This picture illustrates how easy it is to operate a gas range. Many new models have completely closed tops which hold every bit of heat and are easy to clean.

Modern Gas Water Heaters are piping hot in 15 minutes instead of an hour—some are instantaneous—and they give you enough hot water for any bath; enough for a dozen pleasant shaves; enough for dishes or laundry—every time.

The average family uses hot water for as many as 150 things every day. It's too important to wait for, and you never need to wait with a gas water heater. You can afford one—the more gas you use, the lower your gas rate becomes!

Easy Payments— and Your Old Stove Is Your Down Payment!

Our trade-in allowance on your present stove takes care of your down payment on a new gas range or water heater. These appliances actually cost less than many others. You may take from 10 to 30 months to complete these easy payments.
