

WAGE BOOST AWARDED COAST MILL WORKERS

WASHINGTON, July 13 (AP)—An arbitrator designated by the war labor board to settle a lumbermen's wage dispute in the Willamette valley, Oregon, today announced an award of increases which he said would amount to about 7 1/2 cents an hour in the majority of the mills. The award is final.

Denn P. Howard, of the University of Idaho, the arbitrator, awarded these base minimum rates:

Classes A and B mills, 80 cents, which he said was about 2 1/2 cents below the prevailing wage in the Douglas fir industry as a whole; class C mills, 75 cents, and class D, 72 1/2 cents.

The rates are retroactive to April 1. The mills are classified according to productive capacity.

The AFL northwestern council of lumber and sawmill workers had asked a flat general minimum of 82 1/2 cents. Denn Howard said the award directly affected only 25 operations but that it probably would be applied generally throughout the valley where there were more than 450 operations.

The arbitrator said he believed the award would be a strong stabilizing influence and was not inconsistent with the president's message on wages. The effect of the award, he said, was to narrow differentials within the industry and with relation to other industries and he believed, therefore, it offered a solution to the labor turnover problem. He said he had decided he did not have authority to rule on vacation demands.

Upswing Seen For Mining in Pacific Northwest

CORVALLIS, Ore., July 13 (AP)—Establishment of a \$500,000 electro-metallurgical laboratory in the Pacific northwest under the U. S. Bureau of Mines, announced in Washington yesterday, was hailed today at Oregon State college as an important step in mineral development of the northwest.

George Gleason, head of the OSC chemical engineering department and acting head of mining engineering, said that it would be important in developing methods for recovery of metal from the region's almost unlimited supply of low grade ore.

Work being done here on chrome recovery, now through the laboratory stages, can be further developed in the federal plant, he said.

Volunteers For Our Safety

By EARL WHITLOCK

After this war is ended, one hopes that someone will take the time and trouble to see that certain of our civilians receive the honor due them for their voluntary and unpaid services in behalf of the public's safety. There is an effort of preparedness. The hundreds of hours of study, of work and of practice which they have given to public service may never result in a moment's use. One hopes that may be the case. But today, no city may consider itself wholly safe from bombing, no matter where it may be located.

And the airplane spotters in their lonely and often uncomfortable posts, the air-raid wardens whose alertness sees that black-outs are really efficient, the fire wardens, ready to defeat incendiaries, the first-aid experts who have prepared themselves to ease pain and to save lives—all these and many others have our full admiration and appreciation.

All of us honor the spirit of self-sacrificing patriotism which has caused these men and women to give so freely of their time and their convenience in order to prepare themselves thoroughly for jobs that may be all-important.
