ANGELL URGES BIG •

WASHINGTON, April 14 (4) Immediate consideration of a liberalized old-age pension plan

is advocated by Representative

Angell (R-Ore.) as a necessity for

citizens of 60 years or more and as a guard against inflation.

Angell told the house in a

speech that the monthly average of payments under the social se-

curity act is now \$23 a month and "of all persons 60 years of

age or over, four fifths get less than a minimum for decency

"The income of these old peo-

Many Tomato Varieties Prove Easy To Grow, Heavy-bearing, Vitamin-rich

Prepared by U. S. Department of Agriculture for NEA Service No matter how small your Vic-tory garden is, it should have a few tomato plants. People with good sized gardens wil want to allot considerable space to them. The reasons for such emphasis are the many points this native American vegetable has in its

For one thing, the tmoate will grow under a great variety of conditions, and almost any home gardener can produce a crop with fertile soil and sufficient moist-ure. From the standpoint of good nourishment, the tomato is tops. It is one of our richest sources of vitamins A, B, and C. It is likely to be present on the majority of pantry shelves this winter because it is the only veg-etable that can be canned safely without a steam pressure cooker

Over most of the upper south and the north, the tomato is suited to spring, summer and autumn culture. In the extreme south, it is included in winter gardens. Under most conditions, a liberal application of manure and commercial fertilizer will suffice for a good crop. BUY STARTED PLANTS

Experienced gardeners often prefer to start their own tomato plants in the house, but the average city or suburban gardener probably will find it more convenient to purchase strong, healthy plants from a professional grower.

It is estimated that under reasonably favorable conditions, 15 plants will supply one person with all the tomatoes he can eat fresh during the growing season, and produce enough surplus to allow 15-20 quarts to be canned. Twenty quarts are the equivalent of about 30 No. 2 cans from the grocery store.

For early tomatoes, the varieties recommended are Earlianna, Bonny Best, and Pritchard. For medium and late plantings, the disease-resistant Marglobe is a good choice, with Rutgers and Stone also recommended as sturdy varieties.

From its tropical ancestors, the modern tomato has inherited a sensitiveness to cold, so plants should not be set out until all danger of frost has passed. The Department of Agriculture's suggestions for tomato culture by the home gardener center around staking and pruning the plants to a single stem, or two stems at

Set the plants about two feet apart and train them to stakes four or five feet long and about an inch and a half in diameter. Under this plan, the plants are easy to cultivate and the toma-toes, which do not touch the or small strips of old cotton cloth. Loop the string around the stake so it will not slip down and then tie loosely below a leaf node so the stem will be supported but not injured by binding or in any

at the point where they join the Few Victory Model main stem. The tomatoes will where there is no leaf.

Many gardeners take precautions against cutworms by put-ting paper collars around their tomato plants when setting them out. All you need to do this is a pin and a strip of paper about four inches wide, so rigid the cutworm can't walk up it. The collar should go down in the dirt about an inch.

If tomato plants get good care, they will bear throughout the season, except where the intense midsummer heat of the south kills them. In these areas gard-eners plant late crops for fall
