

OREGON LEADS IN RECRUITING NAVY SEABEES

Oregon continues to lead the entire nation in the enlisting of men in the U. S. navy's construction battalions—better known as Seabees—according to word received today by Specialist Dan Schreiber, recruiter in charge of the Klamath Falls navy recruiting station.

The Oregon district not only led the country last month in maintaining the highest average per 100,000 population, but topped the western division in total number of Seabees enrolled. The division also embraces Washington, California, Idaho, Montana and New Mexico.

But even though Oregon stands at the top of the list, much hard work lies ahead in the procurement of Seabees, Schreiber emphasizes, since this month's quota is the largest ever scheduled.

To provide information concerning this branch of the navy and to give petty officer ratings to men qualified for them, Warrant Officer Leo Wolgamood, civilian engineer corps, USNR, will be at the Klamath Falls navy recruiting station on Saturday, August 21.

Mercury Compounds Powerful When Used on Seed

Some of the organic mercury compounds, sold under such trade names as Semesan, Ceresan and Sanosed, are so powerful in disinfecting seeds that they will kill harmful "germs" even if they do not come in direct contact, reports Dr. Frank P. McWhorter, plant pathologist at the OSC experiment station.

Recent work done by Dr. S. G. Lehman in North Carolina has provided more information on best ways of treating seeds with these compounds, says Dr. McWhorter. The compounds containing the mercury in certain forms such as Ceresan will impart the poisonous vapors even to porous material such as paper, which will in turn disinfect seed placed on it. Other kinds must come in direct contact with the seed.

The new information on the use of these disinfectants is contained in a recent volume of the official journal of the plant pathologists, "Phytopathology."

NOTICE HOME OWNERS

Have that septic tank cleaned before winter. Tanks should be cleaned every 2 or 3 years. For price and information call 7333, before 5:30 or after 4:00.

General Patch to Direct Maneuvers At Bend This Fall

WASHINGTON, Aug. 12 (AP)—Major General Alexander M. Patch Jr., who commanded army forces on Guadalcanal, will direct fall maneuvers of the fourth corps in the vicinity of Bend, Ore., September 6 to October 31, the war department announced today.

Patch, who took command in Guadalcanal when marines were withdrawn and directed operations which cleared the Japanese from the island, was returned to the United States to command the fourth corps under a policy designed to give training units the benefit of the experience of battle proven commanders.

LABOR SHORTAGE MAY CLOSE MILLS

SEATTLE, Aug. 12 (AP)—If more manpower is not recruited for the Pacific coast's lumber industry, production will be curtailed and some mills possibly will have to shut down, the West Coast Lumbermen's association predicted yesterday.

The report said this year's production has fallen 17 per cent below the 1942 level.

An average of 153,373,000 board feet was turned out by west coast mills during July and a tide-water log inventory showed 78,000,000 board feet—less than a third of the amount needed by summer's end to carry through the winter, the association report said.

Jap Radio Warns Of U. S. Attacks On North Kuriles

By The Associated Press
The Berlin radio announced in a Tokyo dispatch that Japanese Foreign Minister Mamoru Shigemitsu, German Ambassador Heinrich Stahmer and Italian Ambassador Mario Indelli held a conference this afternoon, discussing "current problems which arise from the tripartite powers from the present war situation." The broadcast was recorded by The Associated Press.

Deadline Set for Filing Objections

WASHINGTON, Aug. 12 (AP)—The interstate commerce commission notified Senator McNary (R-Ore.) that persons who object to the abandonment of the Kent-Shaniko branch of the Union Pacific in Oregon have until August 29 to file a petition asking a rehearing of the case. The commission authorized the Union Pacific to abandon the line after September 10.

Fire Prevention Safeguards Bonds, Says Wiesendanger

By WALTER WIESENDANGER
Chairman, Stop Forest Fires Committee

There is a close connection between buying war bonds and preventing forest fires. Both are a part of the war effort. Neglect of either will delay victory.

A dollar saved is a dollar earned. Fighting forest fires costs money. Every time we prevent a forest fire, or put it out while small, it means that dollars have been saved, dollars which are needed to help the war effort.

Our basic natural resources, such as timber, will help to pay off the war bonds when they become due. It is foolish, indeed, to burn up the collateral which will be used to pay back our investment.

Klamath county timber is being mobilized, and has gone to war. It is backing up our fighting men all over the world. There are over 1200 military

uses for wood. Hence, burning our forests is almost the same as burning bonds; preventing forest fires is a mighty good way to back up our bond buying campaign.

We will use our bonds, in the peace years ahead, to buy the things we need. We will use our timber, in those same years, to create jobs, payrolls, and stability. We will use this timber to help rebuild the world of tomorrow.

We can't have timber and forest fires, too. Every forest fire means that much less timber, either today, or in the years to come. Our advanced second growth, and our young growing stock out in the woods, are the assurance of forest industries throughout the future. We just can't afford to burn it up.

Yes, buying war bonds, and preventing forest fires, go hand in hand here. Neglect of either will delay victory.

Dr. Masters' Health Column—

Summer Heat, Cleaning Lack Make Perspiration Problem

By DR. THOMAS D. MASTERS

The stress of war activities has increased the amount of work to be done, and decreased the space in which to do it. In the summertime, these conditions are closely identified with the matter of perspiration. Fabric shortages and restricted cleaning facilities further accentuate the problem, which is common to all.

At average temperature and humidity, an adult will lose more than a pint of water through the skin in perspiration. At ordinary temperatures, the elimination of water by the skin is not noticed, because evaporation takes place immediately. In the summer, when the air is hot, the fluid loss through the skin is greatly increased, and may range from three to as much as 10 quarts a day.

RESULT OF TOXIC STATES

The volume of sweat is also increased in certain toxic states: as fever subsides, as the result of emotional disturbances, and in exercise. During sleep, the sweat glands are particularly active, and the quantity of the sweat may approach that produced by an equal period of physical exercise.

Sweat is a weak solution of sodium chloride (table salt is sodium chloride) in water with very small quantities of other salts and urea. When secreted under the stimulation of physical exercise, the amount of sodium chloride is increased, and if prolonged, the amount of salt in the blood and tissue fluids may be reduced.

A deflection of the body salt results in fatigue and severe cramps in the muscles of the extremities and the abdominal wall. Those who do strenuous physical work in warm places must replace this salt by drinking salt water (0.2 per cent) or using salt tablets.

When the air is dry, evaporation is rapid, and this action brings on a distinctly cooling effect. When the humidity is high, evaporation is retarded, and the sweat then contributes much to one's discomfort. When the volume of the fluid lost through the skin is considerable, the urine becomes more concentrated, and its volume is reduced.

PERSPIRATION AIDS

Perspiration is practically odorless, but in parts of the body such as the armpit and feet, the opportunity for water to evaporate is reduced, and as decomposition of the waste products and macerated skin occurs, an unpleasant odor develops.

This odor may be obviated by the use of an astringent, which will contract the surface of the skin, thereby closing the sweat ducts, and preventing the

normal flow of sweat. The checking of perspiration over a restricted area of the body is not harmful, because it is balanced by an increase of perspiration elsewhere.

A 10 to 15 per cent solution of aluminum chloride is a satisfactory anti-perspirant, since it is tolerated by most skins. It should be applied to the dry and unbroken skin after cleansing, and should be used as infrequently as possible to accomplish the purpose.

The solution should be washed off before clothing is put on, because the chemical will injure fabrics, particularly cotton and linen, and cause them to disintegrate.

Man Shot by Gas Thieves in Salem Downtown Section

SALEM, Aug. 12 (AP)—Shot by two transients last night after he caught them stealing gasoline from his truck, Don Zander, 24, logging truck driver, was in critical condition today in a Salem hospital.

The shot pierced his diaphragm. Zander said his assailants were a man about 40 years old and a boy about 18, the man firing the shot. The attack occurred on a downtown street.

The men made their getaway in a light sedan.

"POOCH BOOTS"

Dogs that accompany coast guardsmen on beach patrol are outfitted with canvas boots to protect their feet from cuts by sea-shells in the sand at the water's edge. Laces of the canine overshoes are tied around the dog's legs above the boot top.

Husbands who are caught in lies don't get out very often.

75-POUND PACKS

Soldiers in the field must carry everything needed to fight and live. Infantry packs in winter, including arms and equipment, may weigh 75 pounds. Officers' packs lack blanket and overcoat, which are carried by truck.

As long as war output is short of requirements, we have every cause for worry. A man in a bombing plane has a better chance to come back alive if there are 100 planes than if there are 50.—WPB Vice Chairman Charles E. Wilson.

The length of the war will depend upon the uninterrupted continuance of all-out effort on the fighting fronts and here at home. The effort is all one.—President Roosevelt.

Turret-lathe operator from Iowa proud to be a "Brown Derby Man"

Remember that old-time imported Pilsner—how downright satisfying it tasted? Well, sir, Brown Derby beer takes no back seat from imported Pilsner because it, too, is Pilsner. Even the experts say it equals the imported. So tonight with your dinner, or during an afternoon or evening of relaxation at home, open a bottle of Brown Derby. If you don't agree it's equal to its reputation, return the empties and your money will be cheerfully refunded.

at SAFEWAY

Make your dollars fighting dollars; BUY BONDS till the Axis hollers!

TRY IT!

When you serve beer at home, do like hundreds of thousands of Westerners do:

SERVE BROWN DERBY

"THE PILSNER THAT EQUALS OLD-TIME IMPORTED"

Made by Salem Brewery for Safeway

Something substantial!

... the Spoonful of Fitness that's fun to eat!

Good hearty food! When you've enjoyed Shreddies for breakfast you know you've had something you can do a hard day's work on!

Flavor-mellowed! Spoon-size! An exclusive Nabisco process deliciously flavors and mellows each easy-to-eat morsel.

GET GOING RIGHT, EAT SHREDDIES! You get whole wheat's nourishment in Shreddies. It's the energy-building breakfast for these busy days.
