Link Trainer Ride

Axis Rifles—  
(While They Last)

The Army Air Force's "Shot From the Sky" — largest collection German and Japanese aerial equipment ever shown in the United States — will be displayed in Klamath Falls, Wednesday, November 1, as part of the War Department - Treasury program to spur war bond sales and stimulate industrial morale in this area.

This Army Air Force exhibit is the first staged in this country at the expense of the Axis powers. Feature displays in the exhibit are German and Japanese fighter planes, fuselages, plane engines, propellers, tail assemblies, guns and ammunition, parachutes, radio equipment, and thousands of smaller pieces of enemy materiel. In addition to the enemy equipment displayed, a barrage balloon, (shown above) just like those used over our invasion beachheads, will be flown over the grounds in the daytime, and a Link Trainer, small plane used to train American pilots for instrument flying, will be set up for bond purchasers to operate. A large tent will house numerous combat paintings by Major John LaVelle, noted camouflage artist with the Ninth Air Force and the Women's Army Corps will demonstrate the functions of an air base in another large tent.

In the evening an entertainment program will appear on a large portable stage erected by placing four army trailers together. Music will be furnished by a service band and local entertainers will appear.

Russia has made her contribution to the success of this AAF-Treasury exhibit by sending captured German radio equipment. The radio display consists of a German airborne communication set taken from a crashed German plane. A second airborne communication set shows the receiver, power supply, transmitter automatic tuning unit, master control unit and antenna tuning set. All parts are mounted on a temporary wooden frame approximately the same position as they would be in a two-motor German Heinkel bomber.

Over ten million people have viewed the equipment in "Shot From the Sky" already. Don't miss this great wartime exhibit and don't forget that it's your war bonds that brought this axis equipment down out of the sky — buy more war bonds and bring victory that much closer.
