

War Restrictions Limited Work Of Bureau Of Reclamation During 1945

By E. LATON STEPHENS

Owing to war restrictions, only work which benefited the war foods program and was approved by the war production board was in progress during the year at the U. S. bureau of reclamation.

This included the Klamath straits drain outlet and appurtenant structures, three pumping plants and a small amount of work on the dike, drain and lateral system in the Tule lake area.

Construction of the outlet included excavation of 11 miles of drainage channel and was performed under contract by George R. Storey of Phoenix, Ariz. The drainage channel will provide an outlet for drainage waters originating on the Klamath drainage district and a means of carrying excess waters in the Tule lake sump and ponded

areas of lower Klamath to Klamath river.

Appurtenant structures are being built by the Tru-Mix Concrete company of Medford and include two pumping plants, each having a capacity of 200 second feet and a lift of 10 feet; a concrete middle canal over the drain outlet; a three-barrel four by six foot concrete siphon for passing the Klamath drainage district's south canal under the drain outlet, one highway crossing, one railroad crossing and one drain crossing.

Nears Completion

At the close of the year this contract was about 80 per cent completed and with favorable conditions all work should be completed and the system placed in operation within the next 60 days.

In the Tule lake area the completion of pumping plants A, B and C provide essential works in the further development of this area. The plants were constructed under contract by Clifford A. Dunn of Klamath Falls. Plant A, located on the north edge of the Jap camp, will lift water from project drains about 20 feet, delivering it into the M canal which will eventually irrigate about 8000 acres in Coppeck bay.

The plant has a capacity of 100 second feet and consists of three propeller type pumping units, each driven by a 100 HP electric motor.

The M canal where the canal passes through the Tulelake camp. Levees of Tule lake lands in accordance with the terms of their leases constructed 1.5 miles of dike and partially constructed 5.5 miles of dikes adjoined to the Tulelake restricted camp. The bureau also had two dragline excavators engaged on building dikes, drains and laterals.

Bids Opened

On December 27, 1945, bids were opened at the Klamath Falls office of the bureau of reclamation for the construction of a lateral and drainage system to partially serve the Coppeck Bay area. Clifford A. Dunn and the State Construction company of Klamath Falls submitted the low bid of \$145,558. Plans call for this work to be completed late in the fall of 1946.

Other work proposed during 1946 and on which bids will be called for in the near future include the completion of the drainage and lateral system to serve the 11,000 acre trail of lease land west of the Great Northern railroad and also extension of the lateral and drainage system to serve a total of approximately 8000 acres in the Coppeck Bay area in 80-acre tracts.

The bureau is now carrying on surveys and studies of the most practical means of providing additional flood protection for the lands in the Tule lake area so that eventually it will be feasible to open the lands in the Coppeck Bay area for entry.

These studies include the possibilities of enlargements of the Lost river diversion channel, increasing storage in the Gerber reservoir, additional storage in Lost river above Main drain that would control the run-off from another 135 square miles, increased capacity of pumping plant D and improvement of Lost river channel through Poe and Langell valleys. This latter feature is required to permit release from the reservoir during main flood periods.

Rent Control Survey Being Made In KF

A rent control compliance survey is being conducted by the Area Rent Office and will continue until the entire area is covered. Marvin D. Hixon, area rent representative stated today. The purpose of such a survey is to find out cases of rent overcharges and violations of Rent Regulations. Landlords are reminded that to accept or demand rents in excess of legal maximum subjects them to treble-damage actions and penalties under the regulations, Hixon added.

Landlords and tenants in the Klamath Falls rental area have been very cooperative in the rent control program thus far, Hixon pointed out, and the need for such cooperation is just as great so long as rent control is in effect and inflationary housing pressure continues to exist. Enforcement has been tightened for negligent and willful violators, and such violations can not be tolerated at this phase of the program. Any questions pertaining to evictions or maximum rents should be referred to the Area Rent Office, 430 Main street, telephone 6817.

Location

Pumping plant B is located on the south edge of the restricted sump and will lift all drainage waters originating on the Coppeck Bay area about eight feet, delivering it into the restricted sump. This plant has a capacity of 75 second feet and consists of three propeller type pumping units each operated by a 40 HP electric motor.

Pumping plant C, located on the north edge of the restricted sump about one-half mile west of the Modoc-Siskiyou county line, will lift all drainage water originating on the 11,000 areas of lease land lying north of the plant and locally called the Frog Pond and League of Nations tracts.

This plant will lift the drainage waters approximately eight feet, delivering it into the restricted sump. Plant C has a capacity of 100 second feet and consists of three propeller type pumping units each operated by a 75 HP electric motor.

Japanese evacuees from the Tulelake camp lined with concrete about 2900 lineal feet of

Nineteen of the peaks of the Andes mountains exceed 20,000 feet in elevation.

HEY JOE, WATCH THAT BOTTLE

PORTLAND, Ore., Jan. 2 (AP)—A slogan of "Veteran, Spare That Bottle" has been suggested to Red Cross canteen workers greeting troop transports berthing here.

Dairymen said it might help relieve a critical milk bottle shortage. Thousands of milk furnished returnees have gulped down milk and reached for more as they tossed the empty bottles overboard.

WANTED: ONE LANDLORD

HOLLYWOOD, Jan. 2 (AP)—Marine Sgt. Roy E. Jordan had the usual run of luck in hunting a home. So he had a sandwich board painted and marched up and down the boulevard. The sign read: "Have you a home, flat or apartment for myself, my wife and this horrible monster?" An arrow pointed to a photograph of 18-month-old Roy Jr.

HOME COOKING

CANBY, Minn., Jan. 2 (AP)—It appears that too many cooks are not spoiling the broth at Swanson Memorial hospital. The hospital, unable to employ a head chef and an assistant appealed for volunteers. Canby housewives responded.

Civilians Will Use OSC Army Dormitory

CORVALLIS, Jan. 2 (AP)—The Oregon State college dormitory used by army specialized training students will be available to civilians with end of the army program at the college.

The 290 ASTP enrollees began moving from the campus Friday. About 40 will be transferred to the University of Utah. College officials report more than 3000 men have received instruction under the army program at OSC.

HERALD AND NEWS—SEVEN

Portland Will Get Rhododendron Garden

PORTLAND, Jan. 2 (AP)—A gift of land for an international rhododendron garden will match the city's famed rose test gardens, flower enthusiasts believed today.

The American Rhododendron society will transfer its large collection of rare blooms to the 25-acre tract adjoining Sam Jackson park accepted by the state board of higher education. The land was a gift from P. L. Jackson, publisher of the Oregon Journal, Mrs. C. S. Jackson and Sam Jackson.

The Lark

today... **The Lark**

pacemaker for trains to come

Gliding through the night, slipping past the friendly lights of California's coastal towns, Southern Pacific's famous streamlined Lark speeds overnight between San Francisco-Oakland and Los Angeles. Experienced travelers consider the Lark the smoothest-riding, most luxurious sleeping car train in America. Noted for its fine meals and service and its ingenious private rooms, the Lark has many unique features. One of these is the magnificent Lark Club, a combination dining room and cocktail lounge two cars long. No other train has anything like it.

On the Lark, the Daylights, the City of San Francisco and the Sunbeams, Southern Pacific tested many modern ideas in years of daily service. This experience gives us a head start in designing the trains to come.

BENEFITS OF FREEDOM

“... a society of self-governing men is more powerful, more creative than any other kind of system, however disciplined, however centralized.”

—From the August 9, 1945 radio address of President Truman.

As the New Year dawns, and in the spirit of Good Will toward men, let us resolve to be constantly alert to the responsibilities of peace... to be ever on guard to protect the precious freedoms and privileges as set forth in our Constitution and Bill of Rights.

May we ever note well the legislative processes under which our Constitution and laws may be modified in an orderly way... May we never forget those who sacrificed throughout the past, that those things guaranteed by the Constitution and laws of our country should not be lost but that they may serve as a beacon light for all mankind.
