## Guest Editorial

Editors Note: Because of the great interest in wood utilization projects, this editorial from the Roseburg News-Review, written by Editor Charles Stanton, is well worth re-printing.

By CHARLES V. STANTON

MAJOR companies connected with the timber industry are giving most serious consideration to problems of wood waste utilization. The tremendous volume of wood wasted in present production practices is a cause of serious concern. A few years ago the great abundance of timber throughout the nation caused general belief that the resource was inexhaustible and the industry wasted raw materials in reckless fashion. But today, with the total volume of standing timber seriously depleted, while the forest service estimates more than 75 per cent of the wood cut in a forest is either wasted or burned for fuel, a vast amount of research work is in progress to find methods of manufacture for new products utilizing wood now going into mill refuse burners.

The Weyerhaeuser Timber company working for "full utilization," recently announced methods for conversion of even the bark of fir trees into several products promising widespread usage.

Study of wood waste utilization has resulted in discovery of how to make, from what has previously been considered poor material, items excelling in quality anything known to date.

Plywood furnishes a good example. Nothing but the very finest grade of wood now is used. Plywood of the future, however, will have a filler of second or third grade wood, or, perhaps, compressed pulp, with a hard-finish surface of plastic, manufactured from wood fibre. It will be far superior in strength, appearance and usage to the present product.

The Harbor Plywood company has announced acquisition of patents on two products, a new type of flooring and an acoustical wallboard, to be manufactured at its new plant at Riddle.

One of these products promises to meet a long-felt need. It will be in the form of an end-grain flooring which, although only three-fourths of an inch in thickness, will withstand the heaviest traffic.

Three-quarter inch square blocks, with grain on end, will be cut and compressed automatically, then laid on a flexible, mastic base. Sheets of this material may then be cemented to concrete floors, providing all advantages of a wooden floor with a resistance to the most crushing or heaviest traffic.

Toughness of Douglas fir as a floor covering when end grain is exposed is well known. Heretofore, the deterrent to use of wooden floors was found in swelling and contracting because of humidity changes. Armin Elmendorf, in whose Chicago laboratories the new product was developed, reports that the process bought by Harbor Plywood has been exhaustively tested under all possible combinations of humidity, temperature and exposure. Use of small blocks eliminates the warping characteristic which previously caused objection to wooden flooring materials.

This product doubtless will have untold uses. Particularly designed for factories, it also is ideal, it is claimed, for auditoriums, gymnasiums, business houses, post offices, etc., or any place where heavy traffic exists or people are required to stand for long periods at their work, as a wooden surface causes less fatigue than concrete or linoleum covered floors.

Despite the many obvious and practical applications of this new type flooring, it can be made entirely from materials now being burned by the thousands of tons at nearly every operating mill. Knotty boards, stems, large limbs, etc., can be utilized—material heretofore rejected in all milling processes.

The Riddle plant of the Harbor Plywood corporation also is expected in the near future to be producing a new type of acoustical wall board. In addition to its sound-absorbing qualities, this particular

type of board will be fireproof. It can be surfaced with various types of finish, or can be used as a plaster base. Yet it will be made from wood fibre, utilizing waste material entirely.

Utilization of wood waste involves several factors. One is the invention of machinery by which production may be kept at low cost. Special equipment has been designed in connection with the two products to be manufactured at Riddle providing completely automatic production. Another factor is that of making an article better than competing items of comparable cost. Other considerations include availability of materials, transportation from woods to point of manufacture and transportation from factory to market.

As inventive science is concentrating on wood waste utilization these various problems are being solved. Within a few years, we believe, very little of our timber will go into boards as it does today. Instead, it will go into products of greater utility, furnishing more man hours of employment at skilled and semi-skilled rather than common labor rates, while yielding proportionately higher profits.

## The World Today

By DEWITT MacKENZIE  
Associated Press Foreign Affairs Analyst

EIGHTEEN months ago the League of Nations was laid at rest in its \$10,000,000 marble mausoleum on the shore of Lake Geneva, and man's first attempt to maintain peace by means of a world-wide organization was written off as a failure.

But that wasn't the death of hope. The United Nations, brand new and full of grand resolutions for the welfare of humanity, already had swung into action. At long last we were to have peace.

Last week 10 United States senators sponsored a resolution which proposed that the United Nations be revamped. Senator Ferguson, who offered the measure, told reporters that he and others were coming gradually to the conclusion that, if Russia failed to cooperate, it might be necessary to reorganize the United Nations without the Soviets.

**Failed So Far**

THE significance of this move is that the United Nations thus far has failed in the main, and it has failed because it hasn't lived up to its name. It is disunited—split after the fashion of unhappy Europe, with Russia and her satellites on the one side and the democracies on the other. The will of the great majority has, in almost every important instance, been nullified by Russia's employment of a veto power which had been accorded in the charter to each of the Big Five. It was tacitly understood that this was for use only in extreme emergencies. Soviet Representative Gromyko has used the veto with ruthless abandon, thus emasculating the peace organization.

Gradually it has become evident that this Russian obstruction is a piece off the same cloth as Moscow's tactics in international relations at large.

Very gradually, too, it has become clear that these tactics have been part of the general strategy of world revolution for the spread of communism. It has taken a long time for this truth to soak home with a lot of folk who couldn't bring themselves to believe that such a thing could happen. But happen it has, and observers have no doubt that the campaign will continue just so long as Moscow is able to keep the wheels turning.

**Veto Eyed**

THUS we have arrived at the point where important people—and some of them are attached to the United Nations—are wondering if, after all, the UN must be scrapped so that a fresh start can be made. That veto power must be controlled so that it can't be used as a bludgeon for obstruction. Unfortunately there is no way of amending the charter, because the present veto power could be used against amendment, and Russia might be expected to employ it.

It's safe to say that most members of the UN are appalled at any idea of throwing over the present organization and creating another, which likely would be without the Russian bloc, thus widening the breach which already exists. They still hope that if the Western democracies take a firm stand on vital matters, Russia will see the folly of her present course, especially when it becomes clear that the United States is not headed for a tremendous economic collapse, as Moscow has been claiming.

One thing is certain, however. The UN can't long continue as a house divided against itself.

**Bids To Open On Bridge Building**

PORTLAND, July 19 (AP)—Bids on building three concrete and steel bridges on the Fall Creek timber access road east of Eugene will be opened July 30, the public roads administration reported today.

The FRA is handling the work for the forest service.

**Journalistic Career Ended**

MONTEREY, Calif., July 19 (AP)—A journalistic career that began on an up-state New York weekly and grew to international stature ended with the death of Samuel G. Blythe, 79, Thursday night.

The former editor of Cosmopolitan magazine and political writer for the

## SIDE GLANCES

"The tenants left this sport coat at the cottage when they went back to town—it scares the cows, but they'll just have to get used to new ideas!"

## STATIC

Illustrating the fact they can count on a couple of characters named Chet Lauck and Norris Goff. On the air they impersonate Lum and Abner, and the significance of the fingers is that the boys want you to know they have been at it for 16 years. It also says they have eight million words of humor behind them—not more than a dozen of which have been allowed to reach my ears.

It seems to have become my custom around this part of the week to mention one or more who-dunnits, despite my natural antipathy toward this type of program. The reason for this is probably that on Saturday and Sunday nights the air is really loaded with shots, screams and groans. At any rate, I trust all you fans will listen in to Pat Novak and Ross Dolan on Sunday night, and to Bill Lance tonight. Undoubtedly there are more, perhaps "Mr. District Attorney" and surely Mr. Malone, but don't expect me to keep up with them all. For today, you'll have to be satisfied with a short one on Bill Lance—it seems that in his adventure tonight Bill finds a suit of clothes hanging in a closet. Nothing unusual about that, except there is a man in the suit and he's suspended by a rope around his neck.

On the local scene, if you turn to KFLW at 7:30 tonight you'll hear a broadcast of the time trials of the hot rods entered in the Sunday races to be held at the fair grounds. The races will be broadcast over KFLW at 2:30 p. m. Sunday, also on Sunday, at 4 p. m., KFLW will present the baseball game between Klamath Falls and McCLOUD, a regular Northern California league game which will be played at McCLOUD.

## Transportation News

Frank Sexton at Great Northern gave the following doings with GN employees.

L. E. Henry, engineer, is going to enter Hillside Hospital Sunday for surgery.

M. J. O'Donnell, conductor, is going to lay off for a time in the near future for medical attention.

V. J. Josephson, GN agent at Klamath Falls, came back to work yesterday after a two weeks' rest.

P. J. Surprenant, fireman, recently returned from a vacation on the Oregon coast.

## Fairbanks To Head Vets

TACOMA, July 19 (AP)—The Washington-Alaska-British Columbia department of the United Spanish War Veterans will have E. Ray Fairbanks, Seattle, as their commander for the coming year. He was elected yesterday at the 46th annual three-day encampment attended by 600 delegates.

Other departmental officers include: Senior vice commander, Harry Brinkman, Wenatchee; junior vice commander, Charles Davis, Tacoma; inspector, J. W. Miller, Vancouver; R. C. Surprenant, Dr. F. W. Wichman, retail; marshal, Fred Ballou, Ellensburg; and chaplain, Dr. O. P. George, Vancouver, B. C.

Auxiliary officers include: President, Mrs. Nellie R. Hake, Everett; senior vice president, Mrs. Ada Culver, Pasco; judge advocate, Mrs. Lula Shakespeare, Everett; chief of staff, Mrs. Ada Gibbons, Walla Walla; patriotic instructor, Mrs. Areta Gabriel, Centralia; assistant conductor, Mrs. Josephine Livermore, Kennewick; guard, Mrs. Jennie Sampson, Ortiga; and assistant guard, Mrs. Elsie Luttrell, Vancouver, Wash.

## Convention Bound Bus Starts Rumor

MADRAS, June 19 (AP)—Members of the fun-loving Order of the Antelope rolled through town yesterday and that was enough to convince townspeople that the Pacific Trailways bus strike was ended.

They rushed to the depot, only to find that the bus they had seen was driven by the president of the line who was taking a group of friends to the order's annual meeting near Lakeview.

## Astronomers Doubt That "Discs" Are Planet Ships

By J. HUGH PRUETT  
Astronomer, Extension Division, Oregon Higher Education System

At this writing the country is still wildly agog over those mysterious discs which instantly materialize in the azure heights—seemingly from nowhere—roll and skip along the "under heaven," then as suddenly again fade into the great unknown. Perhaps by publication time a complete explanation will be at hand, for, as one college sophomore expressed himself, "it would be terrific if we have to worry along for the next 100 years without knowing."

Suggestions are prevalent that the flying saucers may be scouting ships from another planet. Such visitations from space have long been the theme for stories of the Jules Verne type. From weird boats which descend from the skies there emerge overgrown, goggle-eyed, misshapen creatures like Halloween goblins. Who can forget that Sunday evening in October 1938 when Orson Welles' realistic radio version of H. G. Wells' "War of the Worlds" threw thousands all over the country into panic?

Since the highest planes find the discs still higher, perhaps scientific experimenters have launched something huge high above the earth where the air resistance is very small. To become a satellite very near the earth and constantly encircle it without any further addition of energy, a horizontal speed of 4.9 miles per second would be required. If there were no atmosphere. But there is plenty of atmospheric resistance near the earth. At a height of 300 miles where the air is practically non-existent the required satellite speed would be 47 miles per second. But the least resistance there would make the body gradually spiral toward the earth.

Maybe the saucers are chunks from some exploded celestial body which have been captured recently by the earth. At 300 miles such a piece only 27 miles in diameter would look as large as a full moon. It could easily be seen even if very much smaller. Whether of celestial or terrestrial origin, it would encircle the earth in 95 minutes. This would give an angular movement across the sky each minute of about four degrees, or eight times the width of the moon.

The only certain material visitors from space are meteorites. About 1500 authenticated falls of these

## Glamorous Queen Named Today

HOLLYWOOD, July 19 (AP)—Queen of the Glamorists, they were calling Glorice Tattu, 30-year-old Los Angeles bookkeeper, today.

Miss Tattu, six-foot one-inch brunette, was tops with the Tip-toppers at their high altitude pulchritude contest, held as part of the annual convention of the organization which limits membership to males six-four or better and females at least six feet tall.

Second was another six-one dazzler, Alma Schmidt, 26, of Pittsburgh. Leni Mazuren, 19, Vancouver, B. C., was third. She's only six feet.
