

OLD TIME STAR — Juanita Hansen, movie queen of 35 years ago, now works as an S.P. train dispatcher at Ventura, Calif. The 56-year-old blonde, who once made \$3000 a week for vaudeville appearances, says her life is much more serene than when she was starring with Tom Mix, Bill Hart and Jack Pickford.

Board Upholds Doe Shooting

WASHINGTON, (P)—Deer hunters are gentlemen, they won't shoot a lady deer, and that's bad, says the National Wildlife Federation.

The idea that it's not the thing to shoot a doe has "resulted in more waste venison and over-browsed forests than any other factor in big game management," the federation said in a statement today.

The don't-do-in-a-doe idea is a "deeply ingrained idea, amounting almost to a superstition," the federation continued, taking a dim view of the misguided chivalry.

The national federation, a non-government group, claims a membership of 4,000,000 sportsmen and conservationists and is affiliated with 42 state wildlife federations.

The federations gave some examples of what it's concerned about, and in an aside said that doe venison is just as tasty as buck venison.

"In Wisconsin for example," said the federation, "teeming herds of whitetails did almost irreparable damage to the range year after year while sportsmen shouted down all suggestions that they must start shooting females in order to check the increase."

They thinned out the bucks every fall but the does kept on having fawns. Not as many, to be sure, finally they produced sickly singles where they used to bear fat twins—but they kept on producing."

An official of the New Hampshire game department reported this year, the federation went on, that hunting of deer of both sexes had gone on for 300 years in that state without apparent harmful effects on the deer population.

The buck law—shooting only male deer—is all right for starting small herds, but continued too long is wasteful and biologically unsound, the conservation group contends.

Shots Open Polio Doors?

SAN FRANCISCO, (P)—If a child gets infantile paralysis within a month after being given preventive shots for diphtheria, whooping cough and tetanus the chances for paralysis in the injected limb are increased, Dr. Morris Greenberg of New York City health department reported yesterday.

Observations among 619 polio cases yielded no evidence that the shots had any influence on the number of infantile paralysis deaths.

There was a suggestion but no proof, Dr. Greenberg reported, that recently injected children contracted polio somewhat more readily than those not having received recent shots. The main difference was in the paralysis involved after the attack.

Many of the children received injections of penicillin just prior to or on the day of their polio attacks. There was no clear cut evidence that these injections contributed to the onset of the disease, Dr. Greenberg said.
