the neighborhood, bituminous membrand adamp basement limbrand waterproofing on the show capillarity and condensation as the usual offenders, an actually web basement is invariably caused by leakage. Free water means a leak. Hydrostatic pressure, built up outside the foundation walls, can become so great that water is offered up under footings, through cracks in the basement floor or through Joints between floor and walls.

If waterproofing is called for at all, a good job of membraning is important. You virtually have to foundation walls, can become so great that water is forced up under footings, through cracks in the basement floor or through Joints between floor and walls.

If a blood of the slope, instead of diagonally to the slope, instead of diagonally to the slope, instead of the slope in the slope in the slope in the slope in the slope in

of the old excavation and collects around the foundation.

around the foundation.

In best construction practice, open joint drain tile is laid around the perimeter of foundation footings. This tile is pitched so that it will drain water away from ground the building to a storm sewer or low place where it cen discharge. The open joints are covered with wire mesh or burlan to keep stones and soil from falling into the tile until the ground.

Blend a three-ounce package of Roquefort cheese with two tables spoons of heavy cream and form falling into the building to a storm sewer or low place where it cen discharge. The open joints are covered with wire mesh or burlan to keep stones and soil from falling into the tile until the ground. to keep stones and soil from falling into the tile until the ground becomes naturally anchored. On top of this mesh, contrae gravel or crushed rock—preferably of a one-linch minimum and more or less uniform in size—is backfilled and banked up against the foundation. Earth above this is then tamped in theroughly.
